ACKNOWLEDGEMENTS

The Studbook Keeper wishes to thank all the people and organisations that have assisted with the Studbook compilation.

The Studbook Keeper also wishes to thank, in particular, her research assistants in the production of the International Studbook. Karin Bierbaum who compiled the data presented in this publication, Amy Dickman, who edited paper submitted for publication in the Studbook, and Bonnie Schumann, for her assistance in correspondence with cheetah facilities and data input. In addition, the Studbook Keeper wishes to thank Laurie Bingaman-Lackey for her assistance in data clean-up and connecting previously unknown ISIS links with the Cheetah Studbook data.

Several other people have also assisted in the Studbook's publication, including several EarthWatch volunteers. The following organisations have supported the publication of the International Studbook and are greatly appreciated: the Cheetah Conservation Fund in Namibia, Africa, CCF/UK, CCF USA, USA, and NOAHS Center at the National Zoo in Washington, D.C.

SECTION A

Introduction

INTRODUCTION

The 2000 – 2001 International Cheetah Studbook is the eleventh edition of the world registry for captive cheetah. This edition of the International Cheetah Studbook combines all information available for the period January 1, 2000 to December 31, 2001.

The captive population on December 31, 2000 was 1320 (675.645.0) animals in 264 facilities in 52 countries. On December 31, 2001 the total captive cheetah population was 1376 (710.666.0) animals in 264 facilities in 52 countries. The captive population of cheetah live in eight geographical regions. Figure 1 shows the percentage of cheetah living in these regions as of the end of 2001. Table 1 is a breakdown of the eight regions by country and includes the number of facilities and the number of cheetah in each country for 2000 and 2001.

This edition of the Studbook includes the major changes in the captive population from January 1, 2000 through December 31, 2000 (Section B) and January 1, 2001 through December 31, 2001 (see Section C). Section D is a summary of the captive population of cheetah, by studbook number, at individual facilities as of December 31, 2001. The first column in Section D shows which of the bi-annual 2001 questionnaires had been returned by the facility concerned by April 2002 (either mid-year, end-of-year, both or none), to give an indication of how up-to-date the information used in the Studbook is. The last column shows the date of the last questionnaire returned by that facility, if information is available. Also included in this edition are all additions (section E), 2000 births (section F), 2001 births (section G), 2000 deaths (section H), 2001 deaths (section I) and 2000 – 2001 transfers (section J). Section K includes general comments and deaths notes by individual studbook number for 2000 – 2001 animals. Section L is a listing of Multiple Sires and Dams, which are listed in the Sire and Dam column of the Studbook as “Mult”. Section M is a Studbook listing of all live animals as of December 31, 2001. Section N includes inbreeding coefficients for 2001 live animals. Animals that were formerly listed in SPARKS as T-Numbers (animals with a temporary Studbook number) and that did not influence the analysis of the 2000 – 2001 Studbook have now been given permanent Studbook numbers and are listed in Section O. Section P is a complete Studbook listing of animals. Animals that are still listed as T-numbers and that will be assigned permanent Studbook numbers for the 2002 Studbook are listed in Section Q. Section R includes articles submitted for publication in the International Cheetah Studbook.

From 1 January 2000 to 31 December 2001, 410 (204.190.16) new animals were registered (see Section E). These additions include historical information on animals not previously registered, newly imported wild-caught animals, and births during this period. Historic information was received pertaining to 126 (65.51.10) animals, 57 (33.24) of which were wild-caught and 69 (32.27.10) were captive born. Forty-nine of these had a reported country of origin, and of those, 2 were caught in Botswana, 2 in Chad, 1 in Ethiopia, 1 in Iran, 8 in Namibia, 27 in Somalia, 2 in South Africa and 6 in Sudan.

Sixty-nine (32.27.4) 'historic' births were reported, of which 1 (0.1) occurred in 1993, 3 (2.0.1) occurred in 1994, 4 (2.1.1) occurred in 1995, 13 (4.7.2) occurred in 1996, 17 (8.7.2) occurred in 1997, 12 (5.5.2) occurred in 1998 and 19 (11.6.2) occurred in 1999. The newly reported 1993 birth was from Olmense Zoo, the 1994, 1995, 1997 and 1998 births were from Almarktoum and Fota Wildlife Park, the 1996 births were from Almarktoum, Fota and Huizen FD, and the new additions from 1999 were from Olmense, Almarktoum, Fota, SD-WAP and Fossil Rim.

An overview of the major changes during 2000 and 2001 is presented in Sections B and C. In the 2000 summary, the 1999 column includes corrections that were reported after the publication of the 1999 International Cheetah Studbook; therefore, it differs from the totals published in the 1999 International Cheetah Studbook.

2000 STUDBOOK INFORMATION

The captive cheetah population on December 31, 2000 was 1320 (675.645.0) animals in 264 facilities in 52 countries. Of the 1320 animals, 70% or 930 (482.448.0) are captive-born and 30% or 390 (193.197.0) are wild-born (see Figure 2). This figure shows a decrease by 21 in the number of captive-born animals in the population over 1999, and an increase in the number of wild-born animals since 1999 (345 in 1999 vs. 390 in 2000).

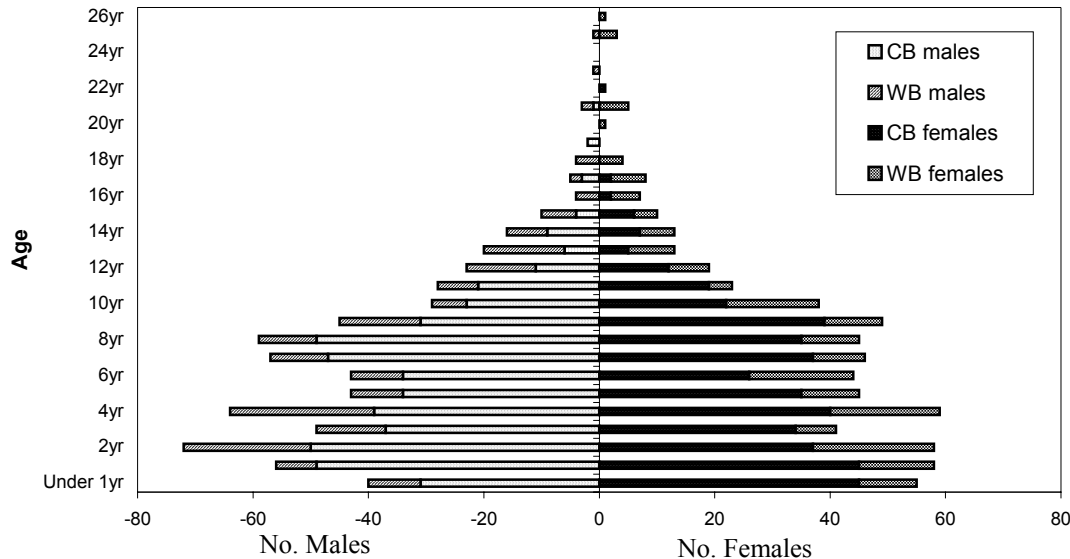

Figure 2. Age/Sex Structure of the 2000 Captive Cheetah Population for Wild-Born (WB) and Captive-Born (CB). (Of these live cheetah, 16 (6.10) are over 20 years of age and are believed to be non-reported deaths.)

Successful parentage was reported in 2000 with animals as young as 2 years old or as old as 12. The majority of successful breeding for both sexes occurs between 3 and 10 years of age. These data are relevant in assessing the age structure of the 2000 population. As shown in Figure 2, 55% or 721 animals (389.332) of the 2000 population are within the prime breeding age bracket (≥ 3 - ≤ 10 years of age). Of the animals in this age bracket, 26% or 191 (95.96) are wild-born. The percentage of sub-adult animals (0- < 3 years of age) is 26% or 340 (169.171.0) animals, of which 24%, 82 (38.44) animals are wild-born. Seventeen percent or 221 (113.108) animals are older than the usual breeding age (> 10) of which 51% or 112 (58.54) are wild-born.

From January 1 to December 31, 2000, 117 (49.67.1) new animals were registered. These new additions do not include the historical information gathered during this period, which is summarized in the introduction, but include newly imported wild-caught animals and births in 2000. Of these newly registered animals, 29 (13.16) were wild-caught, of which 22 (10.12) came from Namibia, 6 (3.3) came from South Africa and 1 (0.1) came from Somalia. These animals were imported to three private facilities in Namibia, two private research and breeding facilities in South Africa and one zoological facility in the United Arab Emirates. Five animals (3.2) were taken first into CCF and were then transferred to Cincinnati Zoo and White Oak Conservation Centre in 2001 as they were non-releasable but were valuable potential breeders.

During 2000, 88 (36.51.1) cubs were born in 27 litters at 15 facilities in 10 countries (see Section F). Table 2 lists these litters of cubs and facilities. These births represent a decrease in productivity over 1999, when 94 cubs were born. Of the 88 cubs born, 9 (2.6.1) died under 1 month of age, which represents a 10.2% infant mortality. 11 (8.3.0) cubs died between one month and six months of age. Total cub deaths fewer than six months of age were 20 (10.9.1), which represent 23.5% cub mortality, a much higher percentage than in 1999 (9.5%).

15 facilities	27	88 (36.51.1)	9 (2.6.1)	20.25

On a facility basis, 6% (15) of the 264 facilities that held cheetah in 2000 had reproductive success. All of the facilities shown in Table 2 had previous reproductive success. There were 20 males and 25 females that were reproductively active during the year. The age distribution of successful breeders in 2000 is presented in Figure 3, and the age distribution of all breeding animals alive at the end of 2000 is presented in Figure 4. This data is relevant in assessing the age structure of the 2000 population presented in Figure 2. At the end of 2000 there were 157 (72.85) proven breeders alive in the captive population. During 2000, only 45 (20.25) animals, 3.4% of the captive population, successfully bred and 16% of these (7) were wild-caught animals.

Figure 3. Age distribution of Animals that Successfully Reproduced in 2000.

Of the 1320 cheetah alive in the 2000 population, 157 (72.85) animals are proven breeders or animals that have bred at least once. This number permits the computation of the effective breeding size (N_e) for the 2000 population using the formula:

$$N_e = \frac{4 \times M \times F}{M + F} = 155.9$$

Where M is the number of breeding males and F is the number of breeding females. This value (N_e) is equivalent to 12% of the captive population.

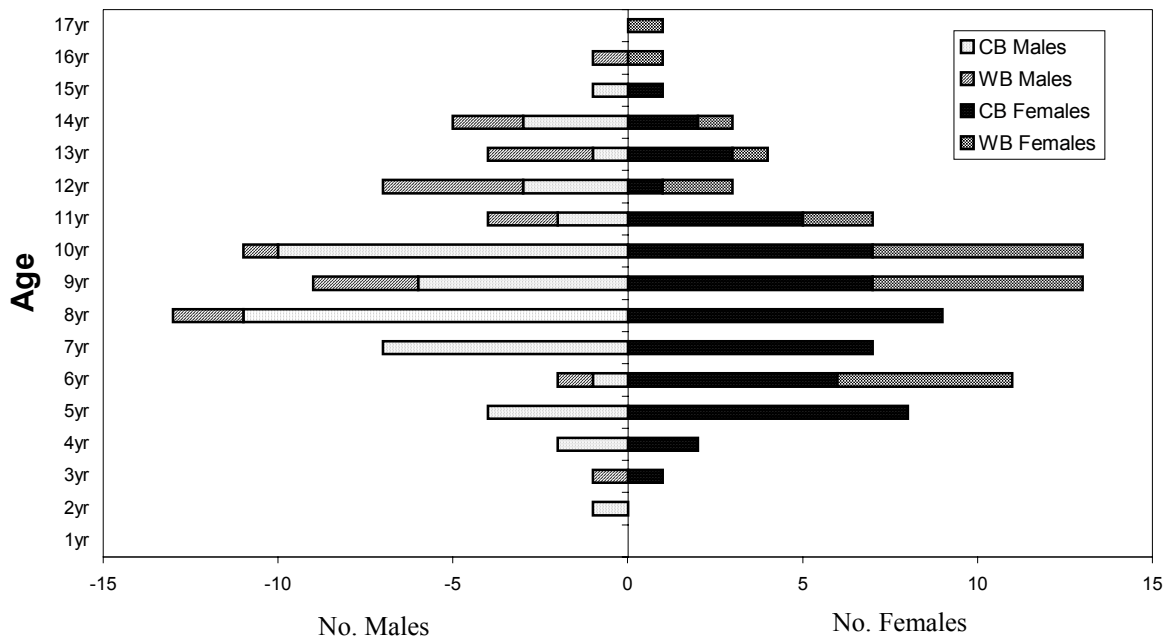

Figure 4. Age Distribution of Proven Breeders Alive as of 31 December 2000

Deaths reported in 2000 totalled 100 (50.49.1), including cub deaths (see Section H). Figure 5 shows the age at death of captive-born and wild-caught cheetah by sex in 2000. Of the animals that died, 39% or 39 (21.18) animals were within the prime breeding age group (≥ 3 - ≤ 10 years of age); 22% or 22 (11.10.1) animals were under 3 years of age, of which 55% or 12 (5.6.1) were under 1 year old; and 39% or 39 (18.21) were over 10 years of age.

Figure 5. Age at Death of Captiv-Born (CB) and Wild-Born (WB) Cheetah, 2000.

During 2000, 75 known facilities transferred animals either into or out of their facilities. Forty-eight facilities transferred 109 (55.54) cheetahs to 54 facilities (see Section J). There are 10 new facilities holding cheetah, and 6 facilities that are no longer holding cheetah. Since the end of 1999, there has been an increase of 21 animals in the world's captive cheetah population.

2001 STUDBOOK INFORMATION

The captive cheetah population on December 31, 2001 was 1376 (710.666.0) animals in 264 facilities in 52 countries. Of the 1376 animals, 70% or 968 (507.461.0) are captive-born and 30% or 408 (203.205.0) are wild-born (see Figure 6). This figure shows an increase by 38 in the number of captive-born animals in the population over 2000, and an increase in the number of wild-born animals since 2000 (390 in 2000 vs. 408 in 2001).

Figure 6. Age/Sex Structure of the 2001 Captive Cheetah Population for Wild-Born (WB) and Captive-Born (CB). (Of these live cheetahs, 17 (6.11) are over 20 years of age and are believed to be non-reported deaths.)

Successful parentage was reported in 2001 with animals as young as 2 years old or as old as 16. The majority of successful breeding for both sexes occurs between 3 and 10 years of age. These data are relevant in assessing the age structure of the 2001 population. As shown in Figure 6, 57% or 786 animals (415.371) of the 2001 population are within the prime breeding age bracket (≥ 3 - ≤ 10 years of age). Of the animals in this age bracket, 27% or 212 (110.102) are wild-born. The percentage of sub-adult animals (0- <3 years of age) is 24% or 329 (162.167.0) animals, of which 20%, 66 (33.33) animals are wild-born. Eighteen percent or 253 (129.124) animals are older than the usual breeding age (>10) of which 49% or 125 (58.67) are wild-born.

From January 1 to December 31, 2001, 164 (88.71.5) new animals were registered. These new additions do not include the historical information gathered during this period, which is summarized in the introduction, but include newly imported wild-caught animals and births in 2001. Of these newly registered animals, 27 (17.10) were wild-caught, of which 9 (4.5) came from Namibia, 13 (8.5) came from Botswana and 5 (5.0) came from Somalia. These animals were imported to two private facilities in Namibia and two private research and breeding facilities in South Africa and one in the United Arab Emirates. Two animals (1.1) were taken first into CCF and were then transferred to White Oak Conservation Centre as they were non-releasable but were valuable potential breeders.

During 2001, 137 (71.61.5) cubs were born in 43 litters at 20 facilities in 14 countries (see Section G). Table 3 lists these litters of cubs and facilities. These births represent an increase in productivity over 2000, when 85 cubs were born. Of the 137 cubs born, 26 (12.9.5) died under 1 month of age, which represents a 19% infant mortality. 9 (5.4.0) cubs died between one month and six months of age. Total cub deaths fewer than six months of age were 35 (17.13.5), which represents 25.5% cub mortality, a considerably higher percentage than 2000.

* indicates first-time reproductive success

On a facility basis, 8% (20) of the 264 facilities that held cheetah in 2001 had reproductive success. As shown in Table 3, 90% (18) of those facilities had previous reproductive success, and 10% (2) of the facilities had success for the first time in 2001. There were 32 males and 39 females that were reproductively active during the year. The age distribution of successful breeders in 2001 is presented in Figure 7, and the age distribution of all breeding animals alive at the end of 2001 is presented in Figure 8. This data is relevant in assessing the age structure of the 2001 population presented in Figure 6. At the end of 2001 there were 160 (75.85) proven breeders alive in the captive population. During 2001, only 71 (32.39) animals, 5% of the captive population, successfully bred and 24% of these (16) were wild-caught animals.

Figure 7. Age Distribution of Animals that Successfully Reproduced in 2001.

Of the 1376 cheetah alive in the 2001 population, 160 (75.85) animals are proven breeders or animals that have bred at least once. This number permits the computation of the effective breeding size (N_e) for the 2001 population using the formula:

$$N_e = \frac{4 \times M \times F}{M + F} = 159.4$$

Where M is the number of breeding males and F is the number of breeding females. This value (N_e) is equivalent to 11.6% of the captive population.

Figure 8. Age Distribution of Proven Breeders Alive as of 31 December 2001.

Deaths reported in 2001 totalled 112 (56.51.5), including cub deaths (see Section I). Figure 9 shows the age at death of captive-born and wild-caught cheetah by sex in 2001. Of the animals that died, 32% or 34 (19.15) animals were within the prime breeding age group (≥ 3 - ≤ 10 years of age); 41% or 46 (24.17.5) animals were under 3 years of age, of which 74% or 34 (17.12.5) were under 1 year old; and 29% or 32 (13.19) were over 10 years of age.

Figure 9. Age at Death of Captive-Born (CB) and Wild-Born (WB) Cheetah, 2001.

During 2001, 75 known facilities transferred animals either into or out of their facilities. Forty-two facilities transferred 118 (64.54) cheetahs to 60 facilities (see Section J). There are 9 new facilities holding cheetah, and 7 facilities that are no longer holding cheetah. Since the end of 2000, there has been an increase of 56 animals in the world's captive cheetah population.

CONCLUSION

The relative success of the world's captive cheetah population over the past few years indicates that an increased reproductive success throughout the world's cheetah facilities can be achieved through a cooperative management program. This will become even more important to work towards as the availability of importing wild cheetahs into captive facilities declines.

There will always be some wild-caught cheetahs that cannot be released back into the wild. It is the responsibility of the world's zoos to cooperate in maximising the breeding success of these important wild founders, as set out in the goals of the World Zoo Strategy. The main goal of the world's zoos is to manage the captive cheetah population without the need for wild-caught animals.

In August 2001, a first Global Cheetah Master Planning meeting took place in South Africa supported by the AZA's Cheetah SSP and facilitated by the IUCN SSC's Conservation and Breeding Specialist Group (CBSG). This Global Master Plan began the process of international cooperation in *in-situ* and *ex-situ* cheetah management. The meeting was attended by 53 invited delegates from 10 countries, including the USA, Australia, Britain, The Netherlands, Kenya, Zimbabwe, the United Arab Emirates, South Africa, Tanzania and Namibia. Working groups dealt with issues ranging from the status and threats facing cheetahs in the wild outside of protected areas, cheetah/human conflict, genetic management, international collaboration, cooperation between captive breeding programs, education, veterinary and disease issues and public awareness, among others. The workshop will result in a series of actions and steps, including the establishment of a global Cheetah Interest Group, for enhanced collaboration and focused conservation efforts for the cheetah. A second meeting will be held in July 2002 to continue facilitating the development of a comprehensive conservation action plan for this species

During the Global Master Plan workshop, the status of the global captive cheetah population as estimated from the International Cheetah Studbook (1985-2000) was reviewed (Bingaman-Lackey et al., in Berry et al. 2002). The total number of living animals listed in the International Studbook in Australia, Europe, Japan, North America, and Southern Africa is 1065 in 161 different facilities. These numbers do not represent all animals and institutions with living animals in the studbook, but is rather a subset of animals that are more likely to be in a managed program either now or in the near future. The various regional programs have different concerns, and the regional populations have different characteristics. Below is a brief description of the status of these populations as presented by Bingaman-Lackey et al. (2002), in Berry et al. (2002).

Demography

Overall, using data from the past 15 years, the global captive population has not been self-sustaining (i.e., Life Table λ less than 1.00). However, success in reproducing cheetahs varies greatly both among (Table 1) as well as within regions. In Table 1 the estimates of λ are based on data from 01/01/1985-31/12/2000. The Census λ is the average annual growth rate of the population. It is based on the total number of living animals at the end of each year and does not take into account the source of those animals. The Life Table λ is an estimate of what the annual growth rate would be in the absence of importation/exportation, and is based on the age specific estimates of survival and fecundity. The difference between these two estimates of the annual growth rate is important. If the census λ is greater than 1 and the Life Table λ is less than 1 (as is the case in all regions outside of the species' range) it suggests that the population has grown more because of importation than captive breeding and that the populations, as managed during that time period, are unlikely to be self-sustaining. Based on Table 1, only the southern African region has produced sufficient offspring to be considered a self-sustaining population; however, there are also some significant differences among facilities within regions. For example, although the North American population as a whole has a Life Table λ of 0.96, the Life Table λ for this time period for three North American Facilities (Fossil Rim Wildlife Center, White Oak Conservation Center, and

the San Diego Wild Animal Park) was 1.10. This large difference within a region may be an important indicator as to how cheetahs could be managed such that a population could become self-sustaining.

Genetics

Table 1 contains the number of Founder Genome Equivalents (FGE) in each regional population. FGE is a convenient method of expressing Gene Diversity (GD), and is equal to:

$$FGE = 1/(2*(1-GD))$$

Table 1 also contains the potential FGE (pFGE) for each regional population. The pFGE is the maximum possible FGEs for the region if all extant founder alleles in the region could be brought to the same frequency in the regional population. While this potential number is not actually attainable, the difference between the actual and potential FGEs in a population gives an indication as to whether importation of additional founder lines would be required to increase the amount of gene diversity in a regional population. As can be seen in Table 1, most regions may be able to increase their amount of gene diversity by a considerable extent by preferentially breeding underrepresented founder lines.

Whereas the numbers of animals in Table 1 can be summed to determine the total number of animals, the same is not true of FGEs. The total FGE would only equal the sum of the Regional FGEs if there were no founder lines shared among regional populations. The sum of the Regional FGEs is 75, whereas total FGE is 42. This suggests that there is considerable sharing of founder lines among regions, and that in order to ensure that genetic material/animals imported into a region can help to increase the region's FGE a careful analysis of the International Studbook is necessary.

Table 1: Status of Regional Populations (Bingamam-Lackey et al 2002 in Berry et al. 2002)

Region	# Animals	# Facilities	Census λ	Life Table λ	FGE	pFGE
Australia/ New Zealand	27	8	1.08	0.88	9	13
Europe	357	72	1.02	0.97	20	71
Japan	62	9	0.99	0.91	8	25
North America	260	62	1.01	0.96	17	56
Southern Africa	359	10	1.05	1.05	21	214

The development and collaboration of successful regional breeding programs is critical in order to contribute to the sustainability of the captive population worldwide. It is hoped that you, the captive managers of cheetah, will continue to assist with the accurate record keeping for collectively managing this species in captivity. As the Studbook Keeper, the data presented to you in the International Studbook is only as accurate as that which is reported. Please check these records and report any discrepancies.

The development of a Global Master Plan will be a critical component for the long-term future of the species. As the free-ranging population of cheetah continues to decline and a large amount of genetic diversity of the remaining populations is lost, the captive and wild populations should be managed in cooperation.

THE STUDBOOK

The International Cheetah Studbook has the purpose of registering all cheetah in the world held in both zoological and private facilities and providing information about existing animals by publishing the studbook contents thus creating the preconditions for selecting breeding animals.

The 2000 – 2001 studbook data includes all cheetah known to be alive as of 31 December, 200???, and includes North American captive/born animals who died in 1970 or after and founding animals now dead who had live offspring in 1970 and after. The International Studbook has added captive animals around the world. It includes wild-caught and captive-born animals, which were alive in 1980 and after, as well as founders with live offspring form 1980. Each registered animal has a studbook card.

The data on the following pages has been computerized using the International Species Inventory System's (ISIS) Sparks Studbook Program. The information was compiled from various sources: Bi-annual questionnaires sent to all facilities holding cheetah; International Species Inventory System (ISIS); and importantly, personal communications. Excellent cooperation has been obtained from many facilities, and it is hoped that the data is accurate and complete. The Cheetah Studbook Keeper makes entries based on reported evidence and must assume that all information received from breeders is correct. Owners and holders of cheetahs are urged to check the studbook for accuracy and if there are any discrepancies, the studbook keeper would appreciate notification.

REGISTRATION PROCEDURES

The following are procedures used by the studbook keeper for registering new animals into the studbook and guidelines for the holding institution, owners, breeders and animal dealers. These guidelines are necessary conditions to achieve the best possible procedures for reporting new acquisitions, additions to inventories (births and imports), and deletions (transfers out of inventories and deaths).

Registration

To register an animal, the studbook keeper is supplied with information about the sex, name, date and place of birth, and all previous owners and dates of transfer of ownership. If the parents are known, please include name, studbook number, breeder number, date of birth and origin of both dam and sire. Also, if this animal has produced any offspring, please give sex, date of birth, mate and disposition for all cubs born.

Once all this information has been gathered, the studbook keeper will issue it a consecutively assigned “studbook number” in the International Cheetah Studbook.

- * Animals caught in the wild will be assigned a studbook number by the studbook keeper.
- * Animals born in captivity will be assigned, by the studbook keeper, a breeder number in addition to their studbook number.
- * The breeder number includes a set of initials that correspond to an abbreviation of the facility name followed by a number. The breeder number is assigned by the studbook keeper according to the sequence of births in that breeding facility. All animals born at the facility are continuously registered, including stillborn and deceased. Numbering in a litter starts with the males and ends with ones of unknown sex.
- * The studbook and house name are the same unless otherwise recorded by the breeder.
- * The studbook card will be sent to the animal owner to accompany the animal until its death. One copy of the studbook cards remains with the studbook keeper.
- * The studbook card is the same colour for all sexes.

Additions To Inventory

- * The studbook keeper must be kept informed of all additions, births or transfers in (requested within one month).
- * For animals caught in the wild, documents must be sent to the studbook keeper indicating date and place of catch, supplier and date of arrival, including an estimated date of birth.
- * For animals born in your facility, report to the studbook keeper the complete litter including stillborn and deceased young; indicate the date of birth and the parents.
- * Offspring and changes of ownership will be entered into the studbook card by the owner.

Deletions From Inventory

- * The studbook keeper must be kept informed of any decreases – transfers out or deaths (requested within one month).
- * If registered animals are sold or transferred, the studbook card must be send to the new owner and change of ownership be reported to the studbook keeper. Be extremely careful when transferring animals through animal dealers and send studbook cards directly to the new owners.
- * The studbook card should be returned to the studbook keeper after the animal's death with the appropriate information, date, place and cause of death, necropsy report and disposition of carcass.
- * The end of the studbook year is December 31 of every year. A bi-annual report of all changes in animals during the year must be sent to the studbook keeper by July 31 (for the period of January 1 – June 30) and January 31 (for the period of time from July 1 – December 31). Bi-annual questionnaires will be sent all the facilities for completion and returned to the studbook keeper.

STUDBOOK FORMAT

Order of Listing: All cheetahs are listed in order of their studbook number.

Dates: Dating system used for birth date, location since date and death date is day of month, month, and year.

Studbook Number: Starting with number 1, these numbers were assigned sequentially in chronological order in the North American Regional Cheetah Studbook. Since some changes in dates occurred since the first Volume in 1983, the changes were left where they are already numbered. Within each year studbook numbers were assigned as the studbook keeper was notified of births or acquisitions and, therefore, are not necessarily listed in chronological order.

Starting with studbook number 611, the International Cheetah Studbook is in chronological order with the new international additions. As changes have been made, the changes were left where they were already numbered. (It is strongly recommended to tattoo all animals in the inner thigh with their studbook number. Please notify the studbook keeper as animals are tattooed.)

Sex: M for male; F for female; U for unknown

Name: The names of the animals are left up to the breeders and owners.

Breeder Number: The breeder number includes a set of initials that correspond to an abbreviation of the facility where the animals was born, followed by a number which is the individual's number in the sequence of births in that breeding facility. The breeder number is assigned by the Studbook Keeper. (See Breeder Facility abbreviations at the end of this section.)

Date of Birth: Each animal's birth date; "Y" after birth date indicates estimated birth date.

Sire and Dam: The studbook numbers of the parents are listed if the parents are known, otherwise listed as "WILD" if the animal was wild-born or "UNK" if unknown, or "MULT" if there is unknown possible multiple selections. When known, the multiple selections are listed in Section K.

House Number: The number used by the holding facility to register the animal with ISIS (The International Species Inventory System, c/o Minnesota Zoological Gardens, 12101 Johnny Cake Ridge Road, Apple Valley, MN 55124, USA), or the individual number used by individual facility.

Location: The institution holding the individual as of the date specified and not necessarily the owner. In most cases, institutions are listed by the city where the institution is located, followed by country. An institutional list is available in Section D.

Since: Arrival date to the facility holding the individual animal or death date.

Status: Indicates Capture, Birth, Transfer, and Death and relates this transaction of the individual animal to the date in the "Since" column.

Tattoo: Indicates the individual's tattoo number or the microchip number. It is strongly recommended to tattoo all animals in the inner thigh with their studbook number. Please notify the studbook keeper, as animals are tattooed.

Inbreed: This number represents the inbreeding do-efficient for each animal.

Comments: Includes cause(s) of death reported through necropsies or causes listed on returned studbook cards; "Living Status Unknown" for living or death status which is not known or confirmed; "Assumed Dead" for animals that are believed not to be living and confirmation is not available; "Same As" identifies animals that have been registered twice. Other comments are encouraged and will be included.

BREEDER NUMBERS – BREEDING FACILITY ABBREVIATIONS

The following is an alphabetical listing of the abbreviations used in the breeder numbers assigned to the facilities.

ABQ – Albuquerque, Rio Grande Zoo, New Mexico, USA
AKI – Akiyoshida Safari Land, Mitou, Miya, Yamaguchi, Japan
ALS – African Lion Safari, Cambridge, Ontario, Canada
AM – Amersfoort Dierenpark, Amersfoort, Netherlands
AS – Oita African Safari, Nishinoda, Ajimu, Usa, Japan
AW – Adventure World, Shirahama, Wakayama, Japan
AZ – Audubon Zoo, New Orleans, Louisiana, USA
BB – Binder Park Zoo, Battle Creek, Michigan, USA
BP – Burger Zoo, Arnhem, Netherlands
BZG – Belfast Zoological Gardens, Belfast, Northern Ireland
CC – Cango Crocodile And Cheetah Ranch, Oudtshoorn, South Africa
CCZ – Caldwell Zoo, Tyler, Texas, USA
CIN – Cincinnati Zoological Gardens, Cincinnati, Ohio, USA
CLS – Lion Country Safari, Laguna Hills, California, USA
COR – Cheetah Outreach, Cape Town, South Africa
COL – Columbus Zoo, Powell, Ohio, USA
CMZ – Cleveland Metroparks Zoo, Cleveland, Ohio, USA
CZ – Colchester Zoo, Essex, Great Britain
DEW – De Wildt Cheetah Breeding and Research Center, South Africa
DPZ – Dickerson Park Zoo, Springfield, Missouri, USA
DV – Desmond Varaday, Middleburg, South Africa
DZ – Dusit Zoo, Bangkok, Thailand
EAF – Endangered Animal Foundation, Huizen, Netherlands
ED – Edinburgh Zoo, Edinburgh, Scotland
FLS – Lion Country Safari, West Palm Beach, Florida, USA
FR – Fossil Rim Wildlife Ranch, Glen Rose, Texas, USA
FWP – Fota Wildlife Park, Carrigtwohill, Ireland
GIL – Frank Gilbert, Cheetahs Unlimited, Phoenix, Arizona, USA
GLS – Lion Country Safari, Stockbridge, Georgia, USA
GSW – Gunma Safari World, Tomioka, Gunma, Japan
GZ – Glasgow Zoo, Glasgow Scotland
HAN – Hanssen, Okonjima, Namibia
HAZ – Hanoover Zoo, Hannover, Germany
HCP – Central Zoo, Himeji, Toyotomi, Hyogo, Japan
HG – Hans Greulich, Bad Oeynhausen, Germany
HOE – Hoedspruit Cheetah Project, Hoedspruit, South Africa
HOW – Howlets Zoo, Great Britain
HZ – Honolulu Zoo, Hawaii, USA
JAC – Jackson Zoo, Mississippi, USA
JZG – Johannesburg Zoo, South Africa
KA – Kaunas Zoo, Lithuania
KAT – Apeldoorn, Netherlands
KR – Krefeld Zoo, Germany
LP – Lincoln Park Zoo, Chicago, Illinois, USA
LOW – Bill Lowe, Beaver Creek, Wisconsin, USA
MHZ – Munchener Tierpark, Germany
MIA – Miami Metro Zoo, Florida, USA
MON – Montpellier, Parc Zoologique Henri De Lunaret, France
MOR – Morocco Zoo, Morocco
MOS – Moscow Zoo, Russia

MUN – Munster Zoo, Germany
MZP – Marwell Zoo, Hants, Great Britain
NEU – Neuwied Zoo, Germany
NH – Neul Hulett, Umhlali, South Africa
OKZ – Oklahoma City Zoo, Oklahoma, USA
OP – Orana Park, Christchurch, New Zealand
PER – Perth Zoo, Australia
PH – Phoenix Zoo, Arizona, USA
PP – Polar Park, Sherwood Park, Alberta, Canada
PZ – Paris Zoo, France
PZB – Parque Zoologic De Barcelona, Spain
QP – Queen’s Park Zoo, East London, South Africa
RAS – Reserve Africaine De Segean, Digean, France
SD – Dan Diego Wild Animal Park, Escondido, California, USA
STL – St. Louis Zoological Park, Missouri, USA
TGN – Tiergarten Nurnberg, Germany
TH – Tierpark Herberstein, Austria
TLP – Tsaobis Leopard Park, Karibib, Namibia
TLS – Lion Country Safari, Grand Prairie, Texas, USA
TOL – Toledo Zoological Garden, Toledo, Ohio, USA
TOR – Metropolitan Toronto Zoo, Ontario, Canada
TYP – Tygerberg Zoo, Kraaifontein, South Africa
TZP – Tama Zoological Park, Tokyo, Japan
VC – Zoo Kralove, Dvur Kralove, Czech Republic
WAS – Wassenaar Wildlife Breeding Center, Netherlands
WEL – Wellington Zoo, Wellington, Great Britain
WH – Whipsnade Park, Zoological Park of London, Great Britain
WO – White Oak Plantation, Yulee, Florida, USA
WPZ – Western Plains Zoo, Dubbo, Australia
WS – Wildlife Safari, Winston, Oregon, USA
WUP – Wuppertal, Germany
ZDD – Parc Zoologique Des Minieres, Doue la Fontaine, France
ZGB – Zoological Gardens Basel, Switzerland
ZLP – Parc Zoologique de la Palmyre
ZM – Zoo de la Casa, (DeCampo), Madrid, Spain
ZZP – Zoological Park Praha, Czech Republic

GENETIC SUMMARY OF DESCENDANT POPULATION

Number of living descendants:	965
Descendant population Mean Kinship:	0.0097
Gene Diversity:	0.9903
Founder Genome Equivalents:	51.3923
Mean Inbreeding:	0.0176
Mean Ne over past 2.40 generations:	169.180
Current Ne estimated from 53 male and 58 female breeders:	110.775
Ne/N ratio:	0.115

Joint AI Program between Perth Zoo, Monarto Zoo and Adelaide Zoo

By: Cree Monaghan , Senior Vet Perth Zoo
Chris Hannocks, Director Monarto Zoo
Terry Fletcher, Perth Zoo
Leif Cocks, Perth Zoo

Joint AI program between Perth Zoo, Monarto Zoo and Adelaide Zoo,

In 1999, a number of male and female cheetahs were transported from Africa into the Australasian region as part of a regional effort to contribute to cheetah conservation. At the time, a number of the animals were young and had not reached sexual maturity.

As cheetahs had not bred naturally in Australia for 16 years, and considering the location of the various genetically diverse individuals, it was decided last year to embark on a cheetah artificial insemination (AI) program based around the Smithsonian Institute model. At the time, Western Australia's Perth Zoo only had one four-year-old female cheetah (born and hand-raised in South Africa), and Monarto Zoological Park in South Australia had eight (5.3) cheetahs, all having just reached sexual maturity.

A cheetah AI team was established in the months leading up to the event. This team comprised veterinarians from Monarto Zoological Park, Adelaide Zoo and Perth Zoo, research scientists, curators, directors, assisted reproductive technique experts and keeping staff. The team communicated by teleconference and produced a plan to inseminate two cheetahs- Perth Zoo's female and a female from Monarto Zoological Park.

In October 2001, Perth Zoo's cheetah was transferred to the cheetah facility at Monarto Zoological Park. A keeper from Perth Zoo accompanied the cheetah and remained with her until she had settled. The same keeper returned to Monarto Zoological Park in the week prior to the AI. The regular routine at Monarto Zoological Park of males passing females to check for signs of oestrous activity was maintained and an intensive behavioural study of all animals was conducted during this time.

In December 2001, both females selected for AI received their ovulation-inducing hormones at the allotted times in accordance with the protocol. Forty hours later, the first female was anaesthetised for AI and a male was anaesthetised for electroejaculation. Unfortunately, the male's semen was contaminated with urine and a second male was selected for electroejaculation. As this was the first cheetah AI performed by any team in Australia, the insemination process took a little longer than anticipated. Fortunately, however, the first female (Perth Zoo's cheetah) had ovulated and produced one corpus luteum (CL). There were a number of small-unovulated follicles still present in the ovary. She was inseminated as planned and proceeded to recover well from the anaesthesia and AI procedure.

The second female was anaesthetised and a third male was anaesthetised for electroejaculation. The semen collection went smoothly, but unfortunately the female had not ovulated. As there were no CL's present, it was decided not to proceed with her insemination.

Fourteen days post insemination, Perth Zoo's cheetah returned home. Forty days post AI, she was sedated for an ultrasound procedure. The ultrasound revealed a single cheetah cub foetus.

This heralded the first successful cheetah AI in Australia. All members of the AI team gained considerable experience. There was also an overwhelming sense of satisfaction that we had developed local skills for successful cheetah AI and that this could have a significant impact on the region's potential to contribute to cheetah conservation.

The participating zoos would like to thank Jo-Gayle Howard, Smithsonian Institute, for her contribution with her tireless responses to our questions in the lead up to and during this program, and for providing us with a tested cheetah AI protocol.

Behavioural Observations and Environmental Enrichment of five captive cheetahs

By: Katherine M. Bell, Cheetah Outreach, Cape Town, P.O.Box 116, Lynedoch, 7603, South Africa;
Email: pawpr1nt@mweb.co.za

Objective

The following article attempts to summarise informal behavioural observations of four captive-born, hand-raised cheetahs, and one wild-born but abandoned and hand-raised cheetah, held at Cheetah Outreach in Stellenbosch, South Africa, during the year 2000.

Notes are also provided on the types of mental and physical stimulation that these cheetahs are provided with, and their varying responses to these stimuli.

Unfortunately, due to the lack of scientific method and absence of a formalised method of data gathering, there is no capacity to analyse this data statistically. I also appreciate the anthropomorphic nature of some statements in this article, but have endeavoured to remain objective where possible.

Background of Cheetah Outreach

With the exception of one, all of the cheetahs held at Cheetah Outreach, are captive-born and hand-raised. The main aim of Cheetah Outreach is to raise funds and awareness of the plight of the cheetah. The male cheetahs cared for at the compound are used as ambassadors for the wild cheetahs of Namibia. Their work involves meeting tourists, visiting school children in both privileged and underprivileged communities, private viewings and functions, as well as shoots with documentary, film and photographic companies. All encounters are under the control of a suitable trained handler. The female cheetahs are kept further from public view, with the intention of using them in the small breeding programme that Cheetah Outreach runs.

The Types of Behaviours observed

The main types behaviours discussed in this article are as follows:

- Running
- Pacing
- Smelling (flehen response – mouth slightly open to “taste” the smell, often in a semi-crouched position)
- Seeking elevation
- Staring/watching
- Chasing
- Stalking/attacking (lunging forward and tapping with feet or biting)
- Biting/chewing
- Self-mutilation
- Vocalising (chirruping, stutter calling)
- Purring
- Rolling
- Grooming
- Licking (any substrate form gates, wood, rock or a handler’s hand/arm)
- Territory marking (urine spraying and defecating)

The Types of Enrichment Provided

Visitor Encounters

The cheetah ambassadors have all been raised with regular human attention. This attention ranges from visitors observing them through fence, handler interaction, and visitor interaction. During such visitor encounters, there is always a handler (that the cat has formed a trust-bond with) with the cat (which is on a lead and collar) and a back-up handler with the visitors. The trust-bond spoken of is interpreted by a consistent relaxed demeanour in the presence of the handler, approaching the handler in an affectionate manner (e.g. licking, lying on lap, purring, placing head in handler’s chest).

The visitors are not allowed into the enclosures unless the cat is in a relaxed position, lying down or sitting up. Strangers never approach the cat if it is pacing or fixated on an object inside or outside of the enclosure. The ambassadors are free to get up and walk away from visitors if they feel uncomfortable with the situation, and then visitors are removed from the enclosure until the cat lies down again.

Often the ambassador cheetahs will apparently seek out attention by lying at the gate or directly in front of the fence. There are areas in their enclosure where they can remove themselves from public view, as well as areas where they can still be viewed, but are not able to be approached by visitors. The staff at Cheetah Outreach recognise behaviours that are interpreted as meaning that the ambassador is ready for visitors, and others that suggest the cat is seeking time alone. For example, a cat may lie in public view but with his back and tail pressed into a corner, fence or bush. This is taken as a “time out” position, since it is impossible to allow visitors to crouch behind the cat. The rules of visitor meetings with the ambassadors are such that strangers never block the cat’s escape path (directly in front of him). Other signals taken to mean that a cat does not want visitor attention include consistently standing, walking or running away as visitors approach. Restlessness in the cheetahs is seen when they are walking around their enclosures, jumping or running for no apparent reason, smelling or urine spraying.

Two of the ambassadors are also taken outside of the compound, where they travel to schools, hotels, public functions and private viewings. This is an event that both ambassadors will come and sit at their gates for, appearing to recognise when the vehicle is being loaded with leads and collars, slide projector etc. These two cats are comfortable with travelling in the vehicle (often lying down and sleeping, or staring out of the window). It has been noted that when travelling routes that the cats have become familiar to, they will normally sleep throughout the trip. However, when taking them to new areas, they will generally sit up and stare out of the windows. When taking a cheetah to an outside function, we will attempt to ensure minimal stimulation for the cat whilst it is waiting in the vehicle. People, animals, noises and vehicles are kept away from the vehicle, and most often, the cheetah will then go to sleep. One ambassador cat will chew the blanket provided in the back of the vehicle whilst he waits to go into the venue. This cat is also known to chew and swat his tail with his front paws when he is either apparently under-stimulated or over-stimulated. For example, the tail chewing behaviour is only observed when he is not used in education or outside functions for long periods of time (2 weeks or more). We use a veterinary product called “Chew Guard” on his tail to prevent the self-mutilation. The damage done to his tail by this negative behaviour is never severe, with only hair shafts being chewed. He has never pulled hair out, just baiting it off at the base, and he has never damaged his skin. Attempts are made to avoid under-stimulation due to lack of trips out of the compound, by taking the cat for trips in the vehicle, even if there is no function booked. Over-stimulation seems to result in more paw chewing and tail swatting and the cat may also “chirrup” and purr. If there is a crowd at this cat’s fence whilst the cat is resting near the fence, the cat may not display avoidance behaviour but will start chewing himself or the fence if the crowd becomes too large or too noisy.

This type of public interaction is seen as enrichment for these ambassador cheetahs, since we have observed many signs that they are seeking out human attention (as mentioned before). Interestingly, during the illness of our eldest cheetah, Inca, we did not allow visitors to meet him. However, upon consultation with our veterinarian, when Inca’s general demeanour worsened (he became very lethargic and withdrawn) we attempted a few visitor encounters. Inca then gradually became more interested in his surroundings and would come and lie by the fence again, instead of at the back of his enclosure. Many staff members present felt at the time, that Inca, having gone from near constant visitor attention, to no visitor meetings, may have felt that he was being “punished” through lack of visitor attention. I appreciate the anthropomorphism involved in this last statement, but the fact that these cheetahs’ daily lives involve many visitor encounters, when the removal of this stimulation may have impacted upon Inca’s mental condition. Inca’s food intake was observed to increase significantly after visitor encounters were re-introduced to his daily routine following surgery.

The Enclosure Environments

The compound is approximately 2.5 ha in size, and divided into 7 enclosures. The cheetahs usually only utilise a quarter of their enclosure on any given day, although they will patrol their boundaries (territory usage has not been formally studied, this last statement simply made through casual observations). The land is flat, but areas of elevation are provided, by ways of roofed huts, artificial rocks or grassy mounds. From these points the cats are able to view pedestrians, trains, road vehicles, horses, birds etc. Elevated areas are commonly used to defecate or urinate on. Four of the enclosures contain log and branch piles (which the cats also defecate and urinate on). The enclosures are grassed, and contain a varying number of shrubs and reeds. Shade is provided by open-sided tents covered by reeds and shade-cloth. Some cats have been seen sitting on elevated areas, staring intently at one object or point in the distance (sometimes unseen by us) for long periods of time (10-20 minutes, occasionally longer).

Since cheetahs are primarily solitary animals, our cats are housed in separate enclosures, allowing them to maintain their own territories. However, the common fences allow interaction between cats if so desired.

Additionally, phenol has been planted in each enclosure to provide new scents. Interestingly, it appeared that some of the cats were nibbling at this plant, which has no adverse effects, and has actually been linked to improved digestion and circulation by some homeopaths.

The Recreation Enclosure

There is also a large “recreation enclosure” approximately one hectare in size. This is used to exercise the cats (discussed later), as well as to provide an alternative environment for the cats to utilise. The cats are put into this enclosure approximately once a week (excluding times they are exercised in this enclosure). If one of them appears unusually restless (e.g. pacing extensively, stalking objects outside of the fence) they are put into this enclosure where they have more freedom to run, chase and stalk. The enclosure is besides a fairly busy road, an din viewing distance of an equestrian centre, so the cheetahs are often seen stalking, watching or chasing horses, cyclists, vehicles, pedestrians, animals or people along the fence, whilst in the “recreation enclosure”.

Each cat reacts differently to being in this “recreation enclosure”. Some will be active the majority of the time they are in there, others will seek out a rest position immediately. It also depends on the amount of stimulation form outside of the enclosure at the time that cat is in the “recreation enclosure”. All cats appear to be able to recognise the time of day (e.g. feeding time at approx. 2pm, or closing time at approx. 5pm) and are often found waiting at the gate of this enclosure, ready to go back to their living enclosures at these times.

Handler Interaction

The cats are often very affectionate towards the handler and will approach them to sit besides the handler, often placing their heads in the handler’s chest. The cats will begin purring when a handler approaches and often lick the hands or arms of handlers. Most of the time that handlers are with the cheetahs, the cheetahs are either lying down, in a semi-sitting position, or a sitting position. One of the ambassador cats will actually come and sit on the handler’s lap, or place his head on their legs and close his eyes. Another ambassador will begin rolling and purring when a handler approaches him, or walks past him at the fence. If he is approached whilst rolling he will often use his front paws to tap the ankles of the handler, and has also been known to bite the handler’s feet, but without breaking of skin. He has never been known to tear a shoe, nor have we had difficulty removing him from the shoe. However, occasionally when he and the other travelling ambassador are at outside functions, and something has caused them to become restless (e.g. a loud noise or long periods of visitors) they have been known to bite or hit handlers with their front paws. These incidents may reflect the cat’s change in demeanour and often marks the end of any visitor encounters. As stated before, once the cat shows signs of “restlessness” the encounters are halted.

Exercise

Exercise of captive cheetahs is seen as being vital for both physical and mental health. The use of a battery-operated pulley system, to which a lure (e.g. rag cloth, stuffed toy or food item) is attached, provides the cats with the vital ingredient to stimulate them to run; sometimes to chase. The cheetahs at Cheetah Outreach are exercised at least twice a week, using this pulley-system. The lure is set up in the “recreation enclosure” and cats are taken in there, one at a time, where the lure is activated and travels around the enclosure at approximately 90km/h. upon seeing the lure the cat will normally chase it for about 1 – 1½ laps of the 350m track. Occasionally the cat is uninterested in the lure, depending on the time of the day, amount of activity prior to lure exposure, and amount of food previously consumed. Sometimes, there is no obvious explanation as to why the cat is uninterested in the lure. We have observed that our 3-year-old female will invariably chase the lure, and she is also our fastest. Our eldest cheetah no longer runs, and is not exercised in this way. Our 3-year-old male is used for public displays of running, and runs well on most occasions (he set the world record for captive cheetahs in 2001, covering a distance of 100m in 6.34 seconds). Our third ambassador, Shadow (5 years old) is now difficult to stimulate to run, but prefers to chase bicycles seen outside of the enclosure! Our fifth cheetah, a five-year-old female, has a bone defect in her right fore leg (possibly due to malnutrition prior to her arrival at Cheetah Outreach) and does not run fast nor for long periods/distances.

The cats are exercised only in the cooler parts of the day (e.g. early mornings and late evenings) and are not given full meals prior to running, for risk of gastric distention or torsion. They are fed a small meal after each run (normally in the form of meat treats used to tempt them back to their enclosures). The cats will not run any longer than they want to, and will often leave the lure to seek rest under a tree, panting. We attempt to occasionally allow them to catch the lure, whilst on other occasions keep the lure just out of their reach. This is thought to prevent them from losing interest in the lure (i.e. if they have constantly are able to catch the lure, or if it is seen as “unobtainable”). Once they have caught the lure, they will lie and chew it, requiring meat treats to get them off it. The course of the track, as well as the direction that the lure is run, needs to be changed occasionally so that the cats do not “learn” the course, as they have been known to lie in ambush of the lure, or cut corners and catch the lure too quickly. Another interesting point is the apparent increased interest in running, when the cats can see another cat or animal chasing the lure. Occasionally we will exercise the cats in our largest internal enclosure (unlike the “recreation enclosure” which is mainly obscured by fences and the central mound). It is also open to the public viewing, which is a feature that allows visitors to see the cats in their “element”. Whilst exercising one cat, all of the other cats are stimulated and will run up and down their fences. Once it is their turn to run, they are far more motivated and will run for longer (in general). The type of lure used also influences their running attempts. Often the rag cloth used in the “recreation enclosure” will be unseen in the grass or obscured by a tree or mound and the cats will lose interest more easily. All of the cats will become very excited by a stuffed toy lure and it is a task to get them to leave it once they have caught it.

Feeding

Since it is known that cheetahs rely more on their sight than olfactory sense to detect food, the hiding of food objects (as done in many facilities with other large felids) is not deemed important. Similarly, since our cats work with members of the public, it would also be unadvisable to have them seeking out food in hidden areas, since this would disturb their working routine. Likewise, the time of day that cheetahs are fed, should preferably be either early morning or late afternoon, in the cooler part of the day, as they feed in a natural environment. Firstly, our cats have never hunted for themselves, and do not have the chase-catch aspect of their feeding routine so feeding in the cooler part of the day is not as important. Secondly, due to public demand to observe feeding, it would be unadvisable for us to feed at times when the public is unable to observe them. The cats are now so used to the midday feeding times that they will often pre-empt us in their feeding area (visible to all cats), the cats are known to stare fixedly towards this area, until food is brought out of it and fed to them. One ambassador shares a fence with the feeding area and he will sit by this fence calling to us until food is brought out. All cats will run towards their gates when a handler approaches with a food bowl.

The type of food items offered varies, including either or both bones and chopped meat. Horse rib bones and ostrich legs are occasionally fed later in the day. The provision of large bones is vital for both, mental stimulation as well as dental health. Bones are often thrown into the enclosures to encourage chasing.

Games

We will often play “games” with the cheetahs. Occasionally they will lie in wait for us when they see us approaching their enclosure gate. They may hide behind reeds or bushes and moving faster towards their hiding place. This will often stimulate them to run towards us where we are then greeted or mock-attacked (one female in particular will tap our legs with her paws or feign a bite to our shoes or legs). After this type of greeting, we are given loud purrs and are licked on the hand. We also encourage the cats to play with footballs and mops. The mop in particular is a favourite with the females who will chase and attack the mop head (long strings of material). When we are unable to use the lure (due to poor weather, faulty equipment or lack of staff/time) we will take the mop into the cat’s enclosure and run with the mop, which they chase. However, we often have more success in luring them to chase the mop when it is on the outside of the fence. This applies to many of the toys that we use to stimulate them, such as the football. Once they lose interest in the toy whilst we are using it in their enclosure, we remove the object and either try another cat or run up and down outside their enclosure fence with the toy. The sight of the toy on the outside of the fence, or being played with by another cheetah will often excite the previous cat into chasing the toy again. When using a football, the two females will chase and bite the ball, or tap it with their feet. There is definitely a familiarity feature in the play attempts by the cats, as it is only when a novel item is introduced do the cats become very excited. After they have seen the toy more than approx. 6 times, they are harder to stimulate into play. This however, is not true for the mop, nor the stuffed toys. Perhaps the fabric of these items is similar to an animal and therefore more “natural” as a play item? Although, our 3-year-old male will chase a piece of brown sheepskin, but upon catching it he will jump away from it, hissing and stalking it from a distance. This reaction differs dramatically to the reaction invoked by toys and is consistent through time.

Unfortunately, the males are uninterested in either the ball or the mop, with one of them actually appearing to be scared of these objects; running away from them. Our youngest male is extremely excited by any stuffed toy and has been known to “bear-hug” handlers in his attempts to get at the toy hidden behind the handlers back! On the other hand, our 5-year-old male is only mildly interested (sniffing, light biting, but soon losing interest, compared to the younger cat who will not remove his teeth and claws from the toy until food is offered to him). Our eldest male does not chase nor attack a toy when offered one, but instead he will purr and lick it and hold it between his paws for as long as we will let him.

Safety is, of course, a major concern when introducing new items of play. The objects are thoroughly cleaned and checked for possible sharp edges or parts that may be consumed. The mop head is torn occasionally but the pieces of cloth are always removed from the enclosures before leaving the cat after playing. Where possible, only natural fabrics are used.

Change of Environment

The cats will explore and investigate new sights and smells in different enclosures. For this reason we will occasionally allow the cats to swap enclosures. Males will scent-mark all objects in a new enclosure, and this stimulates the returning male to re-mark the objects in his enclosure. They will patrol the boundaries of each new enclosure, as well as investigating the huts and shaded areas. They will also defecate in new enclosures, but the faeces are cleared before the cats are returned to their original enclosures for disease control purposes. It is hoped that this swapping of enclosures may help stimulate breeding behaviour. Whilst on the subject of breeding behaviour, it is interesting to note that one of our males will frequently stutter-call to the neighbouring male. He will chase up and down the fence, lick noses through the fence, roll apparently frantically in front of the other male (where his erection is visible), and will repeatedly stutter-call. He does not invoke a reaction in the other male, nor does he behave this way towards any other cheetah that he shares a common fence with.

Planned Future Improvements to Behavioural Enrichment Programme

The construction of elevated, multi-level platforms is planned for the females' enclosures. The construction of these platforms is on hold until donation of materials and labour is confirmed.

Scent trails, using crushed phenol, spices and perhaps bedding from other cheetahs are planned, but this must be done in a way so that the ambassador cats are not prevented from working. The swapping of enclosures already incorporates new scents for the new occupant to investigate.

Other toys such as cardboard boxes, tyres, and rawhide have been suggested by some zookeepers and these will be trailed to see if these cats are interested in such objects.

Summary

The stimulation provided to our cats is derived mainly from human interaction. Their exercise regime is possibly the most important and effective mental and physical stimulation. Although visitors may observe the relative lack of environmental enrichment in our enclosures, it must be remembered that cheetahs are not tree-climbers, nor are they particularly adventurous. What may appear a barren enclosure to visitors, with only a few bushes and raised areas, is perhaps actually the most stimulation environment for an animal that prefers to seek shade and rest, or elevation to observe the surroundings. In order to work with the cats in the way we do, the cats actually require as little stimulation as possible. The visitor encounters appears to actually be a positive stimulation for the cats. However, in order that they do not become "bored" it is important that when they are not working, they are provided with other sources of interest.

It must also be remembered that cheetahs (both in a free-ranging situation and a captive situation) are instinctively conservative of their energy. They do not play once adulthood is reached, and will sleep 16 – 18 hours in every 24-hour period.

There are many possible sources of enrichment for captive carnivores, but the unique method of raising these cats will ultimately affect their behaviour. These cats have never lived without humans, nor have they lived without fences around them. It is felt that from the excellent physical health status of the cheetahs held at Cheetah Outreach, as well as their relaxed nature around their handlers, that these cats are not stressed by captivity. However, every effort is and will be made to improve upon their mental and physical stimulation. Any suggestions as to other possible ways that we can enhance our enclosures or the activities of our cats will be greatly appreciated. The author can be contacted at the below address.

Acknowledgements

Sincere thanks to all Cheetah Outreach staff members, especially Annie Beckhelling, Dawn Glover, Andene Grobler, and Vivienne Fouche for their input into this paper.

Also thanks to Kayla Grams for her information about large carnivore enrichment techniques in American zoos.

Report on cheetah keeping and breeding at Olmense Zoo

By: Ellen Glen

Report on cheetah keeping and breeding at Olmense Zoo

By: Ellen Glen, Olmense Zoo

It is common knowledge that giving an animal medicine can cause a lot of stress, and this stress can make an animal sicker than it already was. In our zoo we have found a solution for this that has helped us to breed 37 cheetahs already.

Olmense Zoo is not unknown by the international press. Aside from the successful expansion of the zoo, the zoo directors, Charel and Wilma Verheyen, have taken less than 7 years to succeed in achieving their goal: to realise a successful breeding programme with cheetahs. The Olmense Zoo also loans their cheetahs to other parks, to help improve the health and genetics of the captive population.

How did they do this with such a difficult animal to breed?

The key to the results is the nursery section of our zoo. In our zoo the people know how to make a cheetah feel good and how to make him comfortable. Even if the animals are living in captivity, we like to give them a cage as natural as possible, with green, grassy areas and trees growing in it. In this area they feel content and can live together, but they can also get out of each other's way and be alone if they want to. Combined with this strategy is the talent of selecting good cheetah couples by the zoo director, Charel Verheyen. This man knows how to bring the right cheetah couples together and get them to breed!

Even with all of this, a lot of love, care and patience is needed and, most importantly, our cheetahs are hand-reared by our attendants, and not by their parents. We think that this has a lot of advantages, in contradiction to what most people say. Hand-rearing makes the animals much quieter and easier to handle. They don't need any narcotics to give them medicines or injections. They are used to their attendants, and will come to them willingly, without being forced or stressed, avoiding the stress that usually causes more problems.

To teach them the strategies for hunting, the attendants play with some toys that make the cubs run and hunt. At dinnertime, 4 big pieces of meat are given to the cheetahs by the attendant, and the cheetahs fight and race each other to get the first piece. After this, the attendant goes into the cages to clean them, with the cheetahs still there as they know him and are used to him. In the past 7 years, while the zoo has been run by the Verheyen family, no accidents with the cheetahs have occurred. On the contrary, all 11 cheetahs are easily to handle and are kindly to be with.

Is this an infringement of the nature of these animals? We don't think so: our animals are healthy and easy to work with, but haven't lost their 'wild' nature – look at all the cheetah cubs born so far! If our animals didn't like the environment, they wouldn't have bred at all, let alone so successfully.

Reporting Period

January 2000 through December 2000

I. INTRODUCTION

The Cheetah Conservation Fund (CCF), founded in 1990 has as its mission ‘to be an internationally recognised centre of excellence in research and education on cheetahs and their eco-systems, working with all stakeholders to achieve best-practice in the conservation and management of the world’s cheetahs.

CCF's base of operations is in Namibia, which has the largest and one of the few sustainable populations of free-ranging cheetah in the world. The cheetah has a special problem compared to the other big cats, such as lion and leopard, which will steal their kill and kill young cheetah. As a result of conflict with these and other predators, the cheetah is maintained at low densities in protected areas but is able to maintain higher densities on farmland due to the absence of other predators. This results in over 90% of cheetah in Namibia living on commercial farmlands where they come into conflict with human and livestock interests. Approximately 70% of the total cheetah prey species (such as oryx and kudu) occur wild on these commercial farmlands.

Therefore, the cheetah's survival depends on a total ecological system of farmland management, prey species management, and habitat stability. CCF’s focus is to work with livestock farming communities in order to develop ways to reduce conflict. This is achieved by devising a conservation plan that secures habitat for the species while accommodating farmers’ land use needs. CCF carries out scientific research programmes in areas such as cheetah population biology, cheetah ecology, cheetah health and reproduction and human impacts on the cheetah. The results of this research form a current database.

CCF researchers develop, test and promote alternative land management practices such as; non-lethal predator controls, relocation of problem cheetahs, and eco-tourism. Additionally, CCF conducts both Namibian and International Education Programmes, to raise awareness of the cheetah’s endangered status. These illustrate ways in which the species can be protected, and encourages worldwide support.

These successes have created an increased demand for all facets of CCF’s activities. New issues and data analysis necessitates further scientific research and increased education programmes. CCF is a dynamic organisation and, as such, is prepared to meet new challenges as they arise.

II. ORGANISATIONAL STRUCTURE

In 1991, CCF became a Namibian Voluntary Trust with a Namibian Board of Directors comprising of leaders in the local community, business, agriculture and government. Additionally, there is an International Science Advisory Board that assists in planning and advising on research projects. The Director is assisted in the management and operations of CCF by a small core staff, short-term volunteers and students.

III. ACTIVITIES AND METHODS

CCF’s International Research and Education Centre is the base for all CCF’s activities. The Centre is located on three farms Elandsvreugde, Osonanga and Cheetah View, totalling 15,300ha. The farm base is in prime cheetah habitat and a wildlife friendly area, with neighbouring farmers who believe in conservation ethics. This ensures a large prey population, which is important for the cheetah population. CCF is an active member of the Waterberg Conservancy, which encompasses over 200,000 ha of private farmland surrounding the Waterberg Plateau Park - a national reserve dedicated to rare and endangered species. The Conservancy's farmers co-operatively manage the Conservancy’s wildlife for long-term sustainability. This in turn provides habitat and prey base for the cheetah.

CCF is currently involved in the following areas of research, conservation and education:

1. Conducting field research to learn more about the biology and overall health of Namibia's free-ranging cheetah population and gaining information about the animals' movements through the farmlands.
2. Identifying and conducting research on key components in farmland ecosystems, including habitat and prey base that are necessary to sustain healthy cheetah populations.
3. Evaluating current livestock practices and their impact on cheetah and addressing conflicts between farmers and predators in order to develop a conservation and management strategy that benefits both humans and cheetah.
4. Researching, evaluating and implementing various non-lethal livestock management techniques that will assist farmers in predator control, thus reducing conflicts and the indiscriminate removal of cheetahs.
5. Conducting conservation education programmes and teacher training in Namibian schools, increasing awareness about cheetah and the predator's role in the ecosystem and environment. Encouraging students of all ages to participate in cheetah conservation efforts.
6. Expanding CCF's Research and Education Centre to assist in accomplishing CCF's mission.
7. Adapting model programmes developed in Namibia for use in other countries by co-ordinating work with wildlife officials and other non-government organisations around the world.
8. Developing an international network that financially aids CCF with accomplishing its goals.
9. Creating and implementing eco-tourism programmes that financially assist CCF to achieve its objectives.
10. Bringing global awareness to the plight of the cheetah by developing links to other organisations and individuals.

IV. PROGRESS DURING REPORTING PERIOD: January – December 2000

A. Developments at CCF's Research and Education Centre

1. CCF Renovation Project

CCF's two-year rebuilding effort was completed under the direction of CCF's General Manager Dr. Bruce Brewer. Otjiwarongo firm, Stechman Construction, and Cape Thatch Namibia have completed the new Hass Family Cheetah Research Centre and the Carl and Cathryn Hilker Education Centre. The main office and clinic and laboratory have now moved to the Hass Family Cheetah Research Centre. This centre also houses the Col. "Jake" Jacoby Memorial Library.

In March 2000, Manda and Graeme Wilson from Namibia joined Mary Wykstra-Ross and Kayla Grams, CCF volunteers from the USA, to put together the exhibits and displays in the Carl and Cathryn Hilker Education Centre. Johann Berger, a Zimbabwean artist, was invited to CCF to design, develop and produce various exhibits around the CCF complex. Elena Chelysheva from Moscow Zoo, Russia, volunteered her artistic skills and produced a number of pastel drawings for various panels, 40 paintings of cats for the phylogenetic tree and a painting of Namibia's predators. Graphic assistance and organisations used included, Winston Retief, Retief Sales Promotion, Windhoek, which fabricated the panel structure and lighting and Mark Rosemann, Omnigraphics, Windhoek, printed all 111 panels and prints for the Centre.

On the 22nd July 2000, His Excellency Dr. Sam Nujoma, Namibia's President and CCF's International Patron, officially dedicated our new Hass Family Cheetah Research Centre and the Cathryn and Carl Hilker Education Centre. Many of CCF's friends, both local and international, as well as officials and dignitaries, arrived at Elandsvreugde to celebrate the opening of the Centre. Namibia's Permanent Secretary of the Ministry of Environment and Tourism, Mr. Tangeni Erkana, served as Master of Ceremonies, Otjizondupa's Honourable Governor, Grace Uushona and US Ambassador, Jeffrey

Bader, delivered dedication speeches. The dedication of CCF's Research and Education Centre also marks CCF's 10-year anniversary of active cheetah conservation in Namibia

The Research Centre houses a veterinary clinic, laboratory and main office. The Visitor's Centre includes a large meeting room and the Education Centre provides students and visitors the opportunity to learn more about the behaviour and biology of the cheetah and the Namibian ecosystem. The graphics in the Education Centre bring the visitor through the history of the cheetah from pre-history to current time and show the diminished range.

One hundred and eleven panels and prints have combined graphics, photographs, artwork, poems, stories, text, video and interactives to provide CCF visitors and school groups with information about the cheetah and its habitat. A phylogenetic tree shows where the cheetah, different from the other 36 cat species, first branched from its early relatives 4 million years ago. The visitor is taken through the life cycle of the cheetah from birth to adulthood and the difficulties involved in its struggle for survival. Exhibits and video present how the cheetah is adapted for high-speed sprinting and specialised hunting techniques. A life size playtree has been built and a trap cage is placed underneath. Graphics explain how farmers live trap cheetahs under these trees.

Included within the grounds is an outdoor "predator preyground" that is a learning area for children of all ages and in the centre of the courtyard includes a beautiful wire frame cheetah sculpture donated by Amy Malouf, a previous conservation biology student. Landscaping in and around the Centre includes gardens, a public braai area and outdoor picnic grounds, a parking area and the building of new cheetah pens and perimeter fences.

The renovation project was sponsored by two grants from the Haas Family Philanthropic Fund in the United States. The matching grant was supported by CCF donors throughout the world and includes major grants from Namibian donors including the NAMDEB Social Fund, First National Bank and several private donors. The development of the Education Centre graphics was sponsored by a grant from the American Zoo & Aquarium Association's Conservation Endowment Fund, Disney's Conservation Fund and continuing support from the Cincinnati Zoo's Angel Fund. CCF's Education Centre is open daily from 9am to 5pm.

Since the opening, further developments have been completed including hanging the original artwork from CCF's publication entitled "the Orphan Calf and the Magical Cheetah" in the Visitor Centre. This "cheetah art gallery" will continue to expand with works of art added from visiting education groups. Several supporting pamphlets and brochures have been designed and mock-ups made. These items will form the first tentative steps towards presenting a truly professional product and thus a step towards achieving CCF's vision of an internationally recognised Centre for educational excellence.

2. CCF Research Farm – Cheetah View

This farm is used as a base for a US University accredited conservation biology field school, where students carry out various ecological research projects on the farm. In addition, this farm supports herds of cattle, goats and sheep as well as a livestock-guarding dog.

Few renovations have been made to this farm due to the time commitment needed in the major renovation project at CCF's main Centre. The renovations include, a newly rebuilt cattle kraal to house newly born calves. In addition, a perimeter fence has been improved to keep livestock out of the yard. The water supply remains a major concern at Cheetah View with many problems being experienced, with boreholes and pumps. The generator providing electricity has also had its problems. An electrician has assisted with some of these problems and the generator has recently been repaired.

B. Research Activities

1. Population Biology

The Fund conducts field research to gather data on distribution, behaviour, biology, demographics and the overall health of the cheetah population. Farmers participate in CCF's research through live capture of cheetah on their farms and assist in collecting biological samples and measurements, ear tagging, radio collaring, and release and report other cheetah/livestock interactions. CCF's director, Laurie Marker, and research assistant, Bonnie Schumann, work directly with farmers and cheetah issues. Other CCF staff and volunteers assist.

Between 1 January and 30 December 2000, CCF worked on 74 cheetahs, some of which had been worked on before, as they were either recaptured or had medical problems that needed attention. Many of the cheetahs handled during this reporting period were orphaned young cubs.

Of the cheetahs examined during the year, 22 (15M.7F) were released back into the wild, of which four (2M.2F) were newly radio-collared; a female with three (2M.1F) three month old cubs, an adult female caught at a play tree in a game camp, a coalition of two males of which a radio-collar was placed on one of the males, and an adult male. In addition a recaptured male was given a replacement radio collar. This dominant male cheetah was re-captured for the fourth time at the same play tree in the same game camp and released again. He was subsequently shot by the farmer. Two other cheetahs were also recaptured and released immediately without a medical workup. In addition, three (1M.2F) cheetahs caught in game farms at the end of December were in short-term holding at CCF at the end of the year. These included a male cheetah requiring antibiotic treatment for an infected foot injury, and two female cheetahs pending blood results and completion of the year-end holiday season (all have subsequently been released to the wild as of the 5 of January 2001).

Necropsies were performed on eleven (9M.2F) cheetahs. Of these, one male was shot for livestock predation, and during the necropsy it was discovered that the cheetah had a chronic injury to its shoulder joint, probably resulting in its livestock predation; three (1M.2F) cheetahs were trophy shot; two captive male cheetahs died from accidental poisoning; three males were road kills (one was tagged by CCF in May 1999); one captive male cheetah died in holding at CCF – the cause of death was not determined; and a male cheetah radio-collared by CCF in February 1999 was found dead on a neighbouring farm - the cause of death was not established. In addition we collected the an old carcass (too old to necropsy) of a female cheetah that broke her neck in a trap cage and also received the remains of a male cheetah shot for suspected livestock predation (no necropsy was done).

Eight (3M.5F) cheetah cubs were collected by CCF staff varying in age from three to five months (estimated date of birth - June/July) and have since been in holding at CCF. Of these, two females were orphaned when their dam was seen to be injured and shot, a third cub was fatally injured during their capture. Three (2M.1F) cubs were orphaned when their dam was shot in a game camp, a fourth cub escaped capture. Two (1M.1F) cubs were orphaned when the female was shot for kudu predation on a cattle farm (not game fenced), an additional cub from this litter was killed. Both these cubs required veterinary attention for deep lacerations on their faces sustained in the trap cage. Lastly, CCF collected a single orphaned female cub with a badly broken front leg that had been held for a month in a trap cage. The cub's broken leg was pinned by a local veterinarian, and the "elephant foot" callus that formed around the break was removed. A year-old male cheetah is currently in holding following an unsuccessful attempt by a game farmer to catch a family group, he is too young to be released alone.

Electro-ejaculation was carried out on six (5 captive, 1 tagged and released) male cheetahs. A veterinarian for CCF also collected blood on a four captive cheetahs at two guest lodges. In addition, two captive cheetahs (1M.1F) were treated for tooth-related abscesses, and one had a bone removed from its mouth. A trapped male cheetah was taken to the dentist to cap a broken canine tooth prior to

release. This proved successful and CCF was written up in the 3-M in-house magazine for use of their dental products on this cat. In addition, 10 captive cheetahs (7M.3F) were re-examined for their annual veterinary checks and vaccinations: five in holding at CCF and five on loan to a tourist lodge.

At the end of this reporting period CCF is currently holding 22 cheetahs and includes: three long-term resident cheetahs (Chewbaaka, Leia, and Old Lady); two young females and one young male held at CCF for over a two years and one male held at CCF for over six months, all that came to CCF as orphans (all four have been identified for export to the US early in 2001); three non-releasable adult male cheetahs that have been in captivity since they were infants; eight cubs around six to seven months of age (six of these are to be exported to the US in early 2001); and a male and two females scheduled for release the beginning of January 2001. An over-view paper on the capture and handling of cheetahs by CCF is in its final stages and nearly ready for publication. This paper is the basis of CCF Director's PhD thesis assisted by research assistant Amy Dickman. These studies are ongoing.

2. Health and Reproduction

CCF collects biological samples to assist in evaluating the health of the cheetah population. A full set of measurements, blood samples and skin biopsies are taken on all animals as well as semen samples from male animals. The information gathered from the sperm is used to monitor the genetics, virology and morphology of the species and to contribute to a genome resource bank. CCF collaborates with other researchers and institutions from the United States, Europe, Namibia and South Africa. This collaboration has allowed experts in genetics, reproduction, veterinary medicine, pathology and conservation to work with CCF thus expanding the use of this valuable data. To date, over 430 cheetah have been sampled, several multiple times, and an extensive database has been developed, with new data continually being added. During the year samples on 74 cheetahs were added to this database.

During August, Dr. Budhan Pukazhenth, a Gamete Biologist from the National Zoological Park's Conservation & Research Centre in Front Royal, Virginia (USA), visited CCF for two weeks to further studies on cheetah sperm cryopreservation and to provide additional training to CCF's staff. During this time, sperm was collected from six male cheetahs held at CCF. The research investigated the beneficial effects of various concentrations of anti-freeze chemicals on cheetah sperm. Preliminary results showed that cheetah sperm withstands a wide range of concentrations.

CCF research collaborator and Scientific Board member, Dr. Linda Munson from University of California at Davis and Laurie Marker, CCF's Director, are working on several papers presently including the health status of the dead cheetahs CCF has necropsied over the years. Having access to dead cheetahs that have been trophy hunted, hit by cars or shot by farmers enables a thorough examination and collection of all internal organs and tissues, facilitating certain studies on overall health and diseases that would otherwise not be possible. A full biomedical collection of two sets of samples, including vital organs, lymph nodes, bone, muscle, skin and reproductive tract, was performed. All samples are meticulously stored and serve as a reference database for future studies. In addition, the skeletons are cleaned, labelled and stored for future studies. In addition, CCF research collaborator, Dr. Cathy Adamson, a virologist from the United Kingdom is working with CCF's Director and Dr. Munson on the analysis of cheetah health data.

Working with collaborators from Dr. Stephen O'Brien's genetics lab at the US National Cancer Institute, genetic analysis has begun on the samples collected by CCF over the past eight years. Preliminary data will be available later in 2001.

3. Cheetah Ecology

During the year, 14 (6M.8F) cheetahs were radio-tracked. At the end of 2000 nine (3M.6F) cheetah were still being tracked in CCF's research area encompassing approximately 15,000 km² in the Waterberg-Otjiwarongo region of the north-central part of Namibia. CCF's radio telemetry research this past year has focused on female cheetahs. Four of the female cheetahs being tracked have cubs and a fifth one is suspected of having just had cubs, judging by her movement pattern. The sixth female still had three youngsters in their second year with her the last time she was seen.

During the past six years of this research, over 50 cheetahs have been collared. These radio-collared animals have actually provided information on more than just the animal collared, as some of the females have cubs and most of the males are part of coalitions (male groups). Radio-collared animals are tracked weekly by fixed-wing aeroplane. Radio-telemetry is a powerful tool and is important to CCF's work with the farming community. The data collected from the tracking is used to show the farmers the actual movements of the cheetah through their land. The information collected also illustrates where cheetahs are in relation to the farmer's calving herds, indicating areas on farms that attract cheetahs and the duration of time spent in an area. Furthermore, it demonstrates to farmers that cheetahs range over large distances and that an individual animal may be seen on many farms.

CCF's radio-tracking programme continues to shed new light on home-range sizes and cheetah behaviour. Each collar brings new information. The radio-tracking data are currently being analysed using the GIS programme ArcView and forms the basis of CCF Director's PhD. dissertation.

4. Predator Ecology (Leopard, Caracal and Serval)

CCF has opportunistically monitored several other predator species including leopard, caracal and recently serval, and in the past brown hyaena. During this reporting period, a necropsy was performed on a trophy shot male leopard, and two male caracals were tagged and released - one that was caught in a neighbouring game farm and the other on CCF's farm Elandsvreugde. A male serval was tagged and released that was also caught on the neighbouring game farm. During the past year, three caracals have been monitored using radio-telemetry. After over a year-and-a-half of monitoring, the radio-collar on one caracal stopped transmitting. The second caracal is still being tracked, while the third one died from an unknown cause and the collar was retrieved.

A leopard currently in holding at CCF has undergone a first-ever procedure in Namibian dentistry work. Dr. Dennis Profitt, Otjiwarongo dentist, assisted by veterinarian Dr. Mark Jago capped the leopard's broken upper canine tooth. With the help of Fajo von Luttwiz, a dental technician, a mixture of dental metal alloys was used to provide the strongest substance for the new tooth, resulting in its silver appearance. But, due to the pressure placed on the tooth during normal eating after a couple months the cap came loose and did break off. This dental research on leopard was an important step in learning and deciding what procedure to use for other leopards with broken canines that are destined for return to the wild.

5. Ecosystem Research

Assessment of the Namibian farmland's ecosystem for the long-term habitat viability for the cheetah is a part of CCF's on-going research. The farmlands support a rich prey base, as 70% of the country's game inhabits these areas. CCF assesses the farmland ecosystem and monitors the wildlife prey base available to predators in CCF's primary research area. Several techniques are used for these assessments and include research and monitoring.

To assist in developing a model for the Waterberg Conservancy's game monitoring, CCF began an ongoing wildlife-monitoring programme on its farm, designed to understand game densities,

movement, demographics, and habitat utilisation. The monitoring involves conducting visual road counts of game at regularly measured points throughout the farm at various times of the day, tracking and counting spoor, categorising vegetation types, densities and distribution and soil analysis. EarthWatch volunteers assist with this research. A total of 72 game counts were done this year in support of the continuous long term monitoring of ungulate distribution over the seasons in the different vegetation densities. CCF researchers covered about 2 000 km of strip-counting and spent 144 hours counting game on Elandsvreugde.

Don Muroua, CCF's Community Development officer and Research Assistant has been responsible for conducting game counts for the last four years. During the past year, he analysed this data for his B Tech research paper entitled "Ungulate distribution over seasons in different vegetation zones".

Information derived from these methods and techniques yield estimates as to which animals are utilising CCF's farm. Furthermore, they should indicate, as a percentage, the utilisation of the various sample areas within the farm, according to species identified. Information gathered from these results will be used to identify areas and patterns of utilisation of the land by wildlife. It will provide valuable information leading to wildlife farming management decisions within the conservancy.

The 6th annual Waterberg Conservancy full moon waterhole count was held in August 2000. CCF again hosted and coordinated the waterhole count volunteers, of which over 100 volunteers assisted. The waterhole count provides an estimate of populations and density of various game species on the farms of the Waterberg Conservancy. The count also provides information on group sizes and population demographics, all vital to a long-term monitoring programme. Data from this waterhole count is currently being analysed by CCF staff and will be finalised for dissemination to Waterberg Conservancy members early in 2001.

6. Human Impacts on Cheetah

Livestock loss to cheetahs is an economic and emotional issue. While farmers perceive cheetahs as having an excessive economic impact on their livestock and wild game industries, many Namibian farmers have done little, from a management perspective, to alleviate their problems in a non-lethal manner. By addressing the farmer's conflicts with predators, CCF is devising a conservation and management strategy that benefits both humans and cheetahs, thus ensuring the species' survival on livestock farms. Through direct contact with individuals, farmer association meetings, a bi-annual Farmer's Newsletter as well as a survey form and calendar, CCF informs the community of its progress and encourages it to remain actively involved in all aspects of its programmes. During this reporting period, two newsletters were mailed to over 2,000 people in Namibia, updating them on CCF's activities and research findings.

CCF remains an active member of the Otjiwarongo community. During the past few months CCF's entire staff joined the volunteer fire fighters to assist with putting out multiple veld fires.

a. Livestock Guarding Dog Programme

CCF's Livestock Guarding Dog (LSGD) programme has continued to grow with nearly 120 Anatolian Shepherd Livestock Guarding Dogs working with livestock. Livestock guarding dogs provide a method of non-lethal predator control that protects the farmer's livelihood while also conserving the predator species. The dogs continue to be monitored by CCF in a bi-annual evaluation of adult dogs and monthly evaluation of puppies for the first six months. CCF has developed a Livestock Guarding Dog and Livestock Research Programme at its Centre, and continues as a breeding facility for these dogs. Susan Deshaies, Lien Malan, and Don Muroua are responsible for the Livestock Guarding Dog programme. Susan works with CCF's dogs in breeding and placing puppies, Lien calls farmers regularly to monitor the progress of the dogs, and Don works in the communal area on dog placement and monitoring progress.

January 2000 saw the placement of nine puppies born to CCF's Caesar and Zanta. Four puppies were placed with commercial farmers, five with communal farmers. In February, eight puppies born to Caesar and CCF's Tyger were also placed. Four puppies were placed with commercial farmers, and four with communal farmers. Monthly calls to new participants indicate that the dogs are working according to expectations. The commercial farmers are reminded to have the dog neutered by the age of eight months and most are complying. The puppies are also up to date with their vaccinations.

In March 2000, John and Rosanne Firreno, Anatolian Shepherd breeders in the U.S, donated a puppy to CCF's programme. This new Anatolian Shepherd brings a new bloodline into Namibia. "Mwagusi", a male, was placed at the farm of Carla Meyer, in Okahandja who has had a female LSGD since June 1998. "Mwagusi" will work with Ms. Meyers second herd and she will participate in CCF's LSGD breeding programme.

A Livestock Guard Dog Owners Workshop was held in Otjinene in June and was attended by nine LGD owners, two potential LSGD owners, Mr. S. Tjitjo (MET) and four CCF staff members. In addition, Dr. A. Bagot-Smith a veterinarian, commercial farmer and LSGD owner presented a lecture on care and feeding of the Anatolians. He discussed the various dog diseases, internal parasites, proper worming, nutrition, the importance of feeding and the impact it has on the dog's guarding ability and growth. The feedback was very positive and participants felt they had a better understanding of how health and food quality and quantity affects their dog's development and guarding ability. The objectives of the workshop were to review the progress of the dogs and to have the farmers share their experiences in the raising and training of their dogs. The workshop was informative and carried out in a participatory manner. The findings show that the LSGD programme is successful and more farmers in the communal area would like to become part of the LSGD programme.

Currently, there are 20 dogs in the communal area. CCF sponsors the sterilisation of communal farmer's livestock guarding dogs to eliminate the possibility of cross breeding. In addition, neutered Livestock Guarding Dogs are not distracted during breeding periods and perform their duty of protecting livestock better. By the end of 2000, there were eight 1-year-old dogs, three 17-month old dogs, and five 2-year old dogs, and one 3-year-old dog.

In total 12 dogs were reported dead this year. Two communal dogs died, one by accident and one from snakebite. In total, ten deaths were reported on commercial farms including one each by accident, snakebite, tick fever, lost, and euthanised from wounds from a predator. In addition, 4 were shot by their owners and one died from unknown causes. Most of the Anatolians placed earlier in 2000 are doing well and the owners are very happy with them.

Two of CCF's female Livestock Guarding Dogs have recently been bred with CCF's male, Ceaser, in November and December 2000. Puppies are due in January and February 2001.

As a part of the renovation of CCF's facilities a grant was given by Ele-friends in Australia to rebuild the Livestock Guarding Dog whelping yard and attached goat yard. Several members of the media reported on CCF's Livestock Guarding Dog Programme, which has generated much interest in the programme as well as financial support.

b. Conditioned Taste Aversion (CTA)

CCF was informed a couple of months ago via a telephone call from the Ministry of Environment and Tourism's (MET) Carnivore Coordinator that MET does not want CCF to conduct CTA trials any longer. He indicated that a letter was sent, should have been sent or will be sent on this. As of yet, CCF has not received any official notice.

In research trials elsewhere, CTA was shown to be an effective non-lethal predator control method. Predators have been presented with a livestock bait that is been laced with a salt substance (lithium

chloride) that makes the predator ill when eating the bait. This teaches the predator that livestock is "poisonous," creating an aversion for that prey. The research was being conducted in collaboration with Dr. Debra Forthman, Director of Field Conservation at Zoo Atlanta. In 1999, two captive leopards successfully completed the CTA trials after which they were radio-collared and released into the wild. A third leopard failed the test and was not released.

c. Community Outreach

Don Muroua, CCF's Community Development Officer, continues to work closely with Namibia's communal farmers, and CCF's Senior Research Assistant, Bonnie Schumann, and CCF's Director work closely with commercial farmers. CCF believes that conservation programmes and efforts will not succeed if the targeted communities are not benefiting. With this in mind, CCF has been actively involved in the development of conservation programmes in the Otjozondjupa and Omaheke Region.

The communal farmers in these regions are dependent on livestock for their daily livelihood; therefore, livestock losses through predation have a large impact on their income generation. Predators therefore are considered problems. The main "problem" predators in these communal regions are the black-backed jackal, leopard, caracal lynx, wild dog, and cheetah. Livestock and predator conflicts in these regions are common, because there is not enough wild game in the area to support the predators.

During the first six months of the year Don visited approximately 200 farmers. These informal visits appear to be welcomed and successful. Many farmers want to learn more about the Livestock Guarding Dog project, while others want to learn more about conservation in a broader term.

In July 1999, the Namibia Communal Wildlife Conservation Group (NCWCG) was established to promote conservation ethic and to facilitate cooperation between the farmers and the different conservation organisations. CCF played a very important role in the establishment and continuing development of the group. Don Muroua has had some discussions with Mr. S. Tjitjo (MET Warden-Okakarara) about different strategies needed to reach the goals set by the NCWCG. In September, Don attended the Torra Conservancy's Annual General Meeting that was attended by over 120 community members. He presented information on CCF and included information about how they could reduce livestock losses due to predation through livestock management. CCF staff also attended two meetings in the western part of Tsumkwe District that brought together the Okotjituuo leadership with the Omatako leadership to discuss issues concerning the develop of a conservation area.

During August, CCF staff attended two communal farm area Agricultural Shows, one in Okakarara and the other in Okamatapati. CCF's booth was well attended at both shows with well over 100 farmers and 300 children. Educational presentations were given using a variety of visual aids. Many farmers appreciate the role CCF is playing in the conservation efforts in this communal area, especially the donation of the Livestock Guarding Dogs.

During September, CCF education staff, headed by Graeme Wilson, crossed Namibia to attend the Swakopmund, Otjiwarongo and Grootfontein Agricultural Shows. CCF's exhibit this year focused on predator friendly farming practices and CCF's new public Education Centre. Special travelling display panels were developed for the staff to take to events like this. CCF achieved good results with this new exhibit and received a second place for the exhibit at both the Swakopmund and Grootfontein show and received a third place certificate at the Otjiwarongo show. CCF's Education Centre proved of particular interest to the many teachers visiting the stalls. Many valuable contacts were made with the people visiting the exhibit.

CCF staff assisted several farmers and provided them with additional information on predator issues and livestock management carried out several farm visits. Several farmers were consulted by telephone and follow up information was posted to them. An additional farm visit was carried out to

assist the owner with two captive cheetahs, during which predator and livestock issues were discussed.

CCF hosted one of the neighbouring farmers association meetings at the facility. This was as a direct result of one of the members contacting CCF last year after shooting a tagged cheetah. During this meeting members learned about livestock management during a presentation on CCF's activities. CCF staff attended several commercial farmers' meetings including the Platveld Farmer's Association of which CCF has become an active new member. CCF staff presented slide programmes at the new Omirunga Conservancy in the Grootfontein area and to the Veldduin Farmer's Association in the Mangeti farming area, north of Grootfontein. Besides cheetah problems, farmers' problems with leopard and wild dogs were also discussed.

d. Waterberg Conservancy and the Conservancy Association of Namibia (CANAM)

CCF remains active in the Waterberg Conservancy. In particular, CCF staff attended several meetings to discuss and develop wildlife monitoring techniques and the development of the Conservancy's Master Plan. In addition, CCF continues to promote and support eco-tourism within the Conservancy. Several international tour groups visiting CCF, including private tour groups, zoos and museums, over-night for one or two nights at Conservancy guesthouses thus providing revenue to this region, in the name of the cheetah.

CCF's Director is the vice-chair of CANAM, an umbrella body for the promotion of conservancies in Namibia. Conservancies encourage sustainable utilisation of natural resources through co-operative management, based on sound conservation principles. One of the major issues being addressed by both the Waterberg Conservancy and CANAM is gazetting law officiating conservancies. This is being undertaken as a part of the new Wildlife and Environment Legislation Act, which is being written currently by MET. During the reporting period, Marker attended two main meetings on this issue. In addition, CCF's Director coordinated a meeting with the northern commercial conservancies to which she is the main representative. The meeting was to share CANAM business with its members, discuss the new wildlife laws and promote the idea of bringing together these northern Conservancies in collaborative game count methodologies. Conservancies and their wildlife management techniques will continue to be extremely important for long-term cheetah conservation.

e. Government Meetings

CCF Director and some of CCF's board members attended several major government official meetings during the past reporting period. Most importantly, CCF hosted the first US delegation to Namibia of members of the US Congress in July. Three ranking members and their wives participated: Congressman and Mrs Clay Shaw; Congressman and Mrs Sonny Callahan; and Congressman and Mrs Hal Rogers. The delegation, arranged by Vance Martin, CCF's US President from The WILD Foundation, and David Barron (WILD board member and long-term supporter of CCF), were hosted by and met with The Minister of Environment and Tourism and his Permanent Secretary, and had a two hour working breakfast with Namibia's President, His Excellency Dr. Sam Nujoma. The U.S. Ambassador, Jeffrey Bader, was a part of these meetings.

CCF issues were on the agenda because of the significant financial and technical support transferred to CCF Namibia from the US. During the course of a wide-ranging discussion on bi-lateral issues, the Congressmen raised CCF's request to, under strict guidelines, loosen the Namibian ban on export of live cheetah. President Nujoma, CCF Namibia's Patron, was very forthcoming and agreed to instruct the Ministry of Environment and Tourism to work under CITES guidelines and allow export of 10 live cheetah to the USA to support their *in-situ* conservation programme and to provide new genetic bloodlines for this managed captive population of cheetahs. Another of President Nujoma's issues on which he asked CCF to assist, is the creation of a model, sustainable industry to selectively clear the increasing bush encroachment that is fast altering the Namibia countryside. The Congressmen agreed to help work toward solutions to this matter. Following the meetings in Windhoek, the delegation flew

to CCF headquarters in Otjiwarongo, toured the facilities. Since this meeting, import permits are being secured from the United States Fish and Wildlife. An additional meeting was held with the Minister and Deputy Minister of MET and the Permanent Secretary and Minister of Foreign Affairs on the cheetah export during a visit by CCF US board member John Lukas, from the White Oak Conservation Center, where some of the exported cheetahs will go.

CCF's Director, along with CCF's General Manager, Dr. Bruce Brewer, and CCF's Namibian Chairman, Dr. Arthur Bagot-Smith, attended a meeting on bush encroachment with the Deputy Ministers of Agriculture and Trade and Industry, as well as the Permanent Secretary of the Ministry of Environment and Tourism. CCF is working to secure funding to develop a bush processing plant in Otjiwarongo. CCF plays an important role not only with cheetah conservation, but is recognised as caring about the country as a whole and its economic future.

CCF Director attended two meetings by MET on the new wildlife policies currently being drawn up. These new laws will affect the cheetah's long-term habitat and ultimate survival. It has been very interesting to be an invited part of this important new Wildlife Act. Key issues for the cheetah include proper wildlife management; the detrimental effects game farms have on cheetahs and banning the use of certain poisons.

f. Namibian Professional Hunters Association and Cheetah Trophy Hunting

CCF continues to cooperate with NAPHA members and other landowners in their role in cheetah conservation programmes that are necessary to support sustainable use of cheetahs. During this reporting period, the US Fish and Wildlife released its decision to not support the downlisting of cheetah from the US Endangered Species List. CCF supports this position, as there still is not enough data on the numbers of cheetahs and population trends in the country, as a proper census has not taken place. This is a prerequisite for the downlisting of a species off the US Endangered Species List.

In 1998, CCF received grants from WWF-USA and the United States Fish and Wildlife Service to support a workshop on cheetah census and survey techniques and analysis. As of yet, this workshop has not been conducted. CCF continued to negotiate with MET and the Forum to initiate the census workshop. While in the US in October, CCF Director met with key members of the US Fish and Wildlife Department along with representatives from the Conservation Breeding Strategy Group of the SSC's IUCN, Safari Club International and World Wildlife Fund to discuss the downlisting issue and the census methodology workshop. It was decided to use the funds available, to hold a regional workshop in South Africa, additional funding will be necessary.

Other issues discussed included alternatives to downlisting as a quota for importing trophy hunted cheetahs into the US from Namibia. There is a way that a trophy shot cheetahs could be imported into the US but there has to be an economic benefit to cheetah conservation and species survival initiatives as part of the justification to do so. Letters of such have been sent to NAPHA, Safari Club International and Conservation Force.

g. Large Carnivore Management Forum

CCF staff regularly attend meetings of the Large Carnivore Management Forum initiated by MET. The Group consists of members from MET, NGO's, farmers and veterinarians concerned with carnivore conservation. The group meets every eight weeks to discuss issues pertaining to carnivore conservation in Namibia. Issues that have been dealt with in the last year include, legislation on carnivores, from captive holding to trophy hunting, the national census for cheetah and developing the forum into an association. At the end of the year meeting, the founding members of this new association were selected.

C. Education Activities

1. School and Community Education

Public education and the development of an active grassroots constituency are integral components of the overall cheetah conservation programme. CCF is educating farmers, teachers and the public about the need and methods to conserve Namibia's rich biodiversity and the role of the cheetah and other predators in healthy ecosystems. Public education and the development of national pride in the cheetah are critical to its survival in Namibia. CCF's Education Centre Curator, Graeme Wilson and Education Officer, Matti Nghikembua, organise and direct all education programmes. During this reporting period over 2000 students and youth group members attended a CCF programme either at the CCF Centre, at their school, or in their community. Educational highlights are as follows.

The relationship between CCF and regional youth forum has continued to progress. CCF staff participated in the 2nd annual Kunene South Regional youth forum meeting where they learned about various issues affecting youth, critical for conservation. CCF's Community efforts also deal directly with youth that are interested in conservation. The youth are the future leaders of tomorrow, and they will determine the future of the cheetah in Namibia. Apart from being exposed to CCF's research and conservation programmes, youth are encouraged to commit themselves to environmental conservation. They are asked to identify local and regional environmental problems, their causes and effects. Some of the issues identified by the youth that affect conservation include: commitment by the youth; lack of or inadequate support from the local businesses, local community and authorities; lack of resources, money, skills, manpower; and coordination of activities

In February, resource materials were donated to the Ministry of Environment and Tourism and the Ministry of Higher Education, Training and Employment Creation. The resource materials were donated to both Ministries for distribution to the relevant environmental education sections. The donation consisted of 28 Teachers Resource Guides, 28 Cheetah Survival on Namibian Farmlands, and information brochures. Panduleni Hamukwaya, National Coordinator for Environmental Education (Youth and Sports), and Elias Amunime from the Ministry of Environment and Tourism received the donations.

CCF short-term volunteers Mary Wykstra-Ross and Kayla Grams donated stationery items to the Rogate Primary School in Otjiwarongo in March. The purpose of the donation was to establish a link between learners from Rogate Primary School and learners from an overseas school in the USA. The learners and the staff of Rogate Primary School warmly received the donation. Susanne Garrison made a generous donation of books and stationery items to Rogate Primary School library in April. As part of the project the learners created drawings illustrating their culture and drawings of hands, which will be part of a children's festival in the USA.

In April, CCF's children's book entitled: *The Orphan Calf and the Magical Cheetah* was given and awarded by the Namibian Children's Book Forum for Children's Non-fiction and the Grossman Prize for Non-fiction. The award, a medal, was received by CCF's Don Muroua and CCF's board member and book's publisher, Jane Katjavivi. The First Lady of Namibia, Mrs. Kovambo Nujoma, gave the award.

The third annual town clean up campaign of Otjiwarongo was celebrated in April, with close to 700 participants. The event was co-organised by CCF and the Regional Youth Officer of Otjiwarongo, Mr. Gerson Geingob. The Deputy Permanent Secretary of the Ministry of Environment and Tourism, Mr. Simenda Simenda, delivered the keynote speech on behalf of the Honourable Minister of Environment and Tourism, Mr. Fillemon Malima. The Major of Otjiwarongo, Ms. Moderata Shaduka, delivered an opening address for the event. Streams with litter were cleaned during this event, signifying the importance of water for a healthy environment.

CCF staff attended a market research survey in May organised by the Community Skills and Development Centre (COSDEC). The objective was to identify and provide relevant training to the community. COSDEC provides a wide range of training, most of which consist of vocational training and computer literacy.

In June, the United States Embassy and the Diplomatic Spouses Organisation honoured CCF's Director for her recent honour of Hero for the Planet by Time Magazine. The event brought together over 100 learners (up to 3 prefix's from each secondary school) in the Windhoek area. Laurie Marker gave a presentation about CCF and talked with all the learners about leadership roles and career paths in science and conservation.

CCF staff, together with an Earth Watch team, completed a bio-medical workup on a trapped cheetah at a primary school in the Summerdown area, east of Windhoek. There were around 200 learners from grades 1 to 4. After watching and participating in the procedure the student participated in a presentation concerned with Namibia's predators and included the differences between leopards and cheetah. A number of CCF resource materials were donated to the school.

CCF's Graeme and Manda Wilson presented an outreach programme specially developed for a holiday farm to the west of Windhoek. CCF visited the farm on two occasions and presented the same programme to two visiting schools from Windhoek. CCF will now become part of their regular programme.

CCF continues to receive feedback from the Geo cheetahs launched at schools overseas. Local schools in Kalkfeld, Otjiwarongo, Otjikoto and Omaruru launched these. The overall progress of the project could not be determined at this time, because of delayed responses from the international host schools. The Geo cheetahs are due to arrive back to Namibia during the first six-month period of the year 2001.

2. CCF Education Centre and Wilderness Camp

CCF's Research and Education Centre provides on-site public education and student training to local students of all ages and foreign university students. It allows students to be exposed to CCF's integrated research programmes on the cheetah's ecology, habitat and prey base, and the demonstration of CCF's non-lethal livestock/predator management techniques. CCF's Education Centre and Wilderness Camp hosts school and community groups, exposing them to different environmental education activities including a Nature Trail, games and other environmental awareness activities. Learners and visitors from various regions visit the Centre. Since the dedication in July, over 250 groups of visitors have visited CCF's newly developed Education Centre.

The majority of CCF's educational programmes during the year have taken place at CCF's Centre. The Centre continues to receive visitors from schools, regional youth groups, youth officials, tourists, teachers, health officials, farmers, conservation and agriculture extension officials, students and the general public. The most significant participants were youth groups and schools from different regions of the country. Participants are exposed to the issues affecting the survival of the cheetah, by participating in various interactive activities and presentations. Various issues are presented regarding factors that affect conservation efforts at community level.

Environmental clubs from Paresis and Okakarara Secondary schools were involved with the Round River Conservation Program. These included learning about the ecology and natural history of the farmland that supports the survival of the cheetah, and also helping with the field surveys conducted. The research projects conducted by the students included bird surveys, animal density and movement, distribution and densities of tree/bush and grass species. The visiting Okakarara Nature club attended various lectures held by Round River Conservation Studies at CCF's Cheetah View farm. The experience gained by the learners was of a great benefit because it allowed them to get exposed to research, ecology and the natural history of the farmlands.

Several youth groups visited CCF. Organised programmes at the Centre were designed mainly for groups accommodated at the wilderness camp. In March, Raleigh International arrived at the Wilderness Camp to build six new huts. The Wilderness Camp can now accommodate 24 people overnight in 12 huts. All groups visiting CCF are given an in-depth presentation and are exposed to the Namibian farmland ecosystem through the nature trail. Team building activities are designed for various reasons, signifying the importance of team efforts in conservation. Role-play and drama were also included in the programmes. These included scenarios of livestock and predator management. The team building obstacles in CCF's new predator "preyground" will in the future be developed further thus broadening the scope of the education programme.

A group of unemployed youth from the Anker District Youth Group used CCF's Centre to teach group and individual skills in communication, leadership, cooperation, thinking and responsibility. Each of these issues is related to conservation and the conservation ethic by CCF's educational staff through discussions on conservancies and interactive activities including using drama to illustrate conservation. The Kunene Youth group helped renovate the huts at CCF's wilderness camp as a community project.

During July, CCF hosted a youth group from the Abingdon Academy in Oxford, England. While here, the group joined forces with members of the Paresis Environmental Club, Otjiwarongo. The two groups worked together on environmental issues as well as building CCF's new Predator Preyground. One of CCF's objectives is to bring students together from around the world to share conservation experiences and knowledge.

Also during July, a student group from the Epandulo Combined School in the Oshikoto region visited CCF as part of a trip to explore their country. This group, under the guidance of teacher Hosea Ester and Peace Corp volunteer Rebecca, worked all year to raise funds for their trip. This was the first time some of these students had ventured further than 60km from their home village.

3. CCF In-service Training and New Field School

During the year, 17 international students conducted short term in-service training or conservation biology courses at CCF including Oxford research assistant Amy Dickmann, 13 US students with Round River Conservation Studies and three students from Aberdeen in UK.

Alfred Gaseb, a student intern from the Polytechnic of Namibia completed a six-month in service training at CCF. During his training, Alfred helped to develop a baseline vegetation survey for Cheetah View and assisted with the surveys undertaken. He was also involved with the Round River Conservation Studies and attended Conservation Biology lectures. Alfred was also involved with the daily activities of CCF. Two University of Namibia Agriculture students conducted their in-service training at CCF during the first half of the year.

Between January and April and September and December thirteen students from throughout North America completed the third and fourth course of Round River Conservation Studies field school at CCF. The student groups each spent three months learning conservation biology, ecology and the natural history of Namibia under the guidance of Dr. Richard Jeo, Jerry Scoville and Ali Scoville. Round River Conservation Studies is linked to Utah State University and has developed partnerships in field conservation focusing on predators and monitoring of prey species. Dr. Sanjayan Muttulingam, UC Santa Cruz, and Dr. Dennis Wilson, Arizona State University, were visiting lecturers during this time. CCF's Don Muroura and Matti Nghikembua participated as assistant teachers sharing their knowledge of the Namibian ecosystems.

During the past few months CCF's Director and Research Director, Dr. Richard Jeo, have communicated extensively with the Vice-Chancellor of University of Namibia as well as the Dean of

Biology to develop a University of Namibia Certification programme for Biology students. A programme is currently being developed.

4. Staff Education

Two members of CCF staff are currently enrolled in higher education as well as continuing their regular duties at CCF. A third will join them in January 2001.

CCF's director, Laurie Marker, is currently enrolled as a Ph.D. candidate at Oxford University in the Zoology Department's Wildlife Ecology Programme, known as WILDCRU, under the supervision of predator specialists Drs. David McDonald and Gus Mills. In September she turned in her year's project report and presented her research to date, for her panel. Three papers are nearly ready for publication. It is envisioned that she will complete her studies and final write up of her dissertation by early in 2002.

Don Muroua, CCF's Community Development Officer is currently enrolled in a B-Tech Nature Conservation programme at Polytechnic of Namibia. He completed most all course work at present and completed his research paper. Don Muroua was also given a scholarship by the Green Trust to attend the South Africa Wildlife College. The Green Trust organised a training course for project leaders in the field of Conservation Based Community Development

CCF's Education Officer, Matti Nghikembua received GIS training at James Reserve and Redlands University in California, USA. With the support from CCF, Matti was privileged to receive an International Scholarship from the Society for Conservation GIS (SCGIS) and the Environmental System Research Institute (ESRI), to attend the GIS training and the annual conferences of both ESRI in San Diego and SCGIS in Anza Borrego, California. CCF's Matti has been accepted on to the B-Tech Nature Conservation course and will be starting mid January 2001.

5. Media and Public Relations

CCF has maintained a high profile in the media through numerous broadcasts on television and in the print media. In recognition of her years of conservation work for cheetahs, CCF's director, Laurie Marker, was invited to San Francisco to participate in the first Hero for the Planet ceremony along with 40 other international conservationists by Time Magazine and the Ford Motor Company. Later in the year, the Cincinnati Zoo presented Laurie Marker with the Zoo's prestigious Barrows Conservation Award for her continuing work to secure the future of the wild cheetah. CCF U.S. board member Cathryn Hilker, founder of the Cincinnati zoo's Cat Ambassador Programme and the Angel Fund, received a similar award to acknowledge both her and her husband, Carl Hilker's support of CCF in Namibia.

Visiting photographers and journalists:

Martin Harvey from South Africa, Balthasar Burkhard from Switzerland, Zoe Titus and Sarah Taylor, The Namibian, Henk Coetsee, MET for the Republikein, Martin Harvey, South Africa, Austen Stevens, Namibia, Ms. Du Toit, Africa Magazine and free-lance writer, SA, Guy Stubbs, Green Trust Projects. Fiona, Automic Productions, two reporters in December looking at using CCF for TV documentaries South Africa radio show about Livestock Guarding Dogs and CCF. UK radio programme - the Libby Purchase show. TV programmes in the US: CNN – Business Unusual in New York, 3 local news programmes on Cincinnati TV, Oregon’s AM NorthWest TV programme, Canada’s Discovery TV – Live remote. Film companies: Brite-Side TV – programme on the Livestock Guarding Dogs for ‘Animal Planet’

D. International Activities and Meetings

The Fund assists in international programme development and adapts model programmes developed in Namibia for use in other countries, distributing CCF materials and information throughout Africa, Europe and the United States. CCF’s director is one of five vice chairs of the IUCN’s Cat Specialist Group and maintains international communications on the status of the wild cheetah population worldwide, including its relationship with man and threats to its survival.

1. The Director’s Presentations

CCF’s Director gave a presentation to a Women’s group of American Businesses in South Africa in February. She presented a lecture for the WILDCRU of the Department of Zoology in Oxford, UK. She also presented at the Cheetah Species Survival Plan (SSP) meeting and for the Felid Tag Group of the American Association of Zoos and Aquariums (AZA) in April. The Director gave an invited paper at the Namibian Scientific Society’s 75th Anniversary meeting and presented a keynote lecture at the Swedish Federation of Zoo’s annual conference.

2. International Cheetah Studbook

CCF’s director is the Keeper of the International Cheetah Studbook, which is a registry of all cheetahs living in captivity. The 1999 International Cheetah Studbook was published and distributed worldwide in April. The Studbook is a registry of all cheetahs in captivity and serves as a guide for regional and global captive breeding programmes. As of 31 December 1999, the world's captive population of cheetahs was 1296 (668 males, 620 females, 8 unknown) in 272 facilities in 51 countries. Published within the Studbook were several articles and reports about cheetah from captivity as well as in the wild. This is the second time the studbook was distributed to cheetah facilities on a computer disk instead of a hard copy. The 2000 *International Cheetah Studbook* is currently being compiled.

3. IUCN SSC’s Conservation Breeding Specialist Group (CBSG) Annual Meeting

In October, CCF’s Director and Amy Diekman, CCF Research Assistant, attended the annual meeting of the IUCN’s CBSG meeting. A slide presentation was given on CCF’s activities to the international audience of conservationists. CCF’s Director had asked for time at the CBSG meeting to begin planning for a Global Cheetah Master Plan meeting. Several of CCF’s international cheetah colleagues met as a working group during the three-day conference. The Global Cheetah Master Planning meeting is planned for August 2001 in South Africa and will include cheetah specialists from cheetah range countries and captive managers. The purpose of the Master Plan is to coordinate strategies for long-term cheetah survival incorporating *in-situ* and *ex-situ* research and conservation.

4. Matti Nghikembua's USA Visit

CCF's Education Officer, Matti Nghikembua was given a partial scholarship to travel to the United States by the Environmental System Research Institute where he received training in their GIS ArcView and ArcInfo computer mapping programmes. While there he presented a paper entitled: Habitat Monitoring for the Endangered Cheetah in Namibia, at the annual conference for the Society for Conservation GIS (SCGIS) conference in Anza Borrego Springs, California and a poster at the Environmental System Research Institute's (ESRI) annual conference in San Diego California. The presentation and poster focused on CCF's efforts and the use of GIS in both the education and research programs. Professionals from GIS related fields attended the event, where various papers were presented, by both the international scholarship recipients and by invited guests.

During his visit to the USA Matti Nghikembua visited and gave presentations at the following organisations: National Cancer Institute, Maryland, Smithsonian's Conservation Research and Education Centre Virginia, Society for Conservation GIS, Anza Borrego Springs, California, the Environmental System Research Institute, San Diego California, Cincinnati Zoo and Columbus Zoo in Ohio and San Diego Zoo in California.

5. African Zoo and Reserve Educators Network (AZOREN) Meeting

CCF's Education Officer, Matti Nghikembua attended the first African Zoo and Reserve Educators Network (AZOREN) meeting during May in Pretoria, South Africa. A total of 13 countries were represented, with most participants being from South Africa. The main objective of the conference was to create a link among African Zoo Educators, in order to facilitate networking. The participants of the workshop also shared some of their experiences of Zoo education, discussed and identified areas that need networking efforts. Matti also presented a slide show about CCF efforts.

E. CCF Organisational Activities

1. Development and International Fundraising

a. United States and Canada Fundraising

CCF's Education Officer, Matti Nghikembua attended a CCF Cheetah Run for Survival fundraiser event that took place in June at Foothill College, near San Francisco, USA. Matti had the opportunity to thank CCF supporters for their help and interest in the survival of the cheetah.

During September and October, CCF's Director conducted her annual fundraising and lecture tour. This year she visited three continents, five countries, 12 states and over 20 cities. The lecture tour helped to raise much-needed money for CCF's Namibian projects and international work. CCF's message reached thousands of people during this trip. During the two months, CCF's director lectured at several universities and private and community events organised by members of the US CCF Chapters in New York, Chicago Cincinnati, San Francisco, Seattle and Portland. All organised several lectures in each city and included among others lectures at the Cleveland Metroparks Zoo, the Oakland Zoo, the Oregon Zoo, the Hogle Zoo, the Metro Toronto Zoo. In addition, CCF's Director was the keynote speaker at the American Association of Zookeepers conference in Columbus. A new chapter has been developed in Southern California. And CCF Canada was launched while she was in Toronto. In Washington DC, CCF's Director and CCF's Research Director met with the Namibian Ambassador and US Congressmen who visited Namibia in July, as well as with several conservation granting organisations. In addition, they meet with research collaborators at the National Zoo and the National Cancer Institute, and the University of California at Davis.

b. Namibian Fundraising

The CCF Namibian Board of Directors continues to become more active in CCF's activities. In March, a Board Retreat was conducted. The board met on two separate weekends to look at CCF's future. The board developed a new Vision and Mission statement 2000. Many tasks were laid forward for the board during the next year. CCF's main fund raising activity is its annual dinner. Over 300 cheetah friends and supporters joined Namibian Prime Minister, Right Honorable Hage Geingob, at CCF's second annual fundraising dinner, on 15 July 2000, at the Windhoek Country Club. The Celebration of Speed and Elegance, as the dinner is called, featured three guest speakers and a lively silent auction. Dr. Hu Berry, Principal Conservation Scientist for MET, gave an enlightening slide presentation on Namibia's large carnivores, Vance Martin, President of the US based WILD Foundation, presented a chronicle of the ten-year development of the Cheetah Conservation Fund, and John Lucas, Director of the White Oak Conservation Centre in the USA presented an overview of Okapi conservation activities. Silent Auction items were generously donated by Namibian and international artists and local businesses. CCF staff Susan Deshaies coordinated the dinner, and Lien Malan designed table decorations in house.

c. South Africa Cheetah OutReach

Cheetah OutReach, based at Spier Wine Estate in Stellenbosch, South Africa, has continued to support the efforts of CCF through their educational outreach programmes. Financial support from this programme has contributed to CCF's Centre renovation project.

d. UK Fundraising

Due to the great interest in CCF's work a UK chapter of CCF has been firmly established. A board meeting was held in October to plan CCF activities for 2001. Alan Lester, one of CCF's UK board members, has commissioned CCF t-shirts and mugs and these are currently being sold in his Oxford retail store.

2. Volunteer Programme

Volunteers are the backbone of CCF's programmes. During the past six-months over 46 volunteers have assisted at CCF. CCF continues to work with EarthWatch volunteers of which four come to the Centre every other month for a two-week period. For the year, the EarthWatch programme totalled 24 volunteers that assisted in all aspects of CCF's programmes. CCF continues to work with the British youth development organisation, Raleigh International. Between March and May, 45 Raleigh ventures built six huts at CCF's Wildernes Camp.

3. CCF Staffing

CCF's permanent staff includes:

Laurie Marker – Executive Director

Dr. Bruce Brewer – General Manager

Dr. Richard Jeo - Research Director

Bonnie Schumann – Senior Research Assistant

Amy Dickman – Research Assistant

Mandy Schumann – Farm Manager

Don Muroua – Community Development Officer

Matti Nghikembua – Education Officer

Susan Deshaies – Business Manager and Livestock Guarding Dog Coordinator

Graeme Wilson – Education Centre Curator

Manda Wilson – Publications Assistant

Lien Malan – Part-time Public Information Officer and Research Assistant

CCF also supports fourteen Namibian farm and domestic workers.

V. PLANNED ACTIVITIES: January –December 2001

During the next year CCF will:

- Continue working with farmers in cheetah related issues and reducing conflict.
- Continue with a tag-and-release programme and biological sampling of cheetahs.
- Continue the radio-tracking programme, with emphasis on female cheetah.
- Continue work with the Large Carnivore Management Forum Association.
- Coordinate the export of 10 cheetahs from Namibia to the United States for Namibia's President.
- Work with Ministries of Agriculture, Environment and Tourism and Trade and Industry on bush encroachment related research and bush industry development.
- Continue working with the Waterberg Conservancy in wildlife, habitat monitoring, eco-tourism activities and promoting the concept of conservancies in Namibia through CANAM. CCF will continue working with communal conservancies.
- Continue to expand the Livestock Guarding Dog Programme through breeding and placement of dogs. Two litters of puppies are due in early 2001 and will be placed during the next reporting period. Data on the dog programme are being compiled and analysed. Research will begin on the effective use of local dogs in communal areas for livestock protection.
- Continue to expand CCF's community development programme with emphasis on youth groups.
- Continue to conduct educational assembly programmes in schools throughout Namibia and assist teachers in the use of CCF's Teacher's Resource Guide through teacher training workshops.
- Follow-up with schools that have been involved in CCF outreach programmes.
- Conduct the fifth session of the Field College on Cheetah View in cooperation with Round River Conservation Studies.
- Work with University of Namibia in developing a certification programme for Conservation Biology courses.
- Continue with student research projects in co-operation with Namibia's Polytechnic and the University of Namibia. Other international students will also be joining CCF for intern programmes.
- Continue as a field station for EarthWatch and work with EarthWatch volunteers.
- Continue working with Raleigh International volunteers.
- Continue working with CCF's Namibian fundraising committee to recruit partnerships with local businesses.

- Assist with the development of CCF UK and CCF Canada.
- Assist Iran and India with developing a cheetah programme in their countries.
- Assist Zimbabwe and South Africa with their cheetah programmes.
- Assist with the Global Cheetah Master Plan meeting and the Regional Census Methodology workshop planning to be held in August.
- Publish research papers on CCF's research.
- Continue to host national and international journalists.
- Develop a marketing strategy for the promotion of CCF's new Education Centre to enhance eco-tourism to the region.

Reporting Period

January 2001 through December 2001

I. INTRODUCTION

The Cheetah Conservation Fund (CCF), founded in 1990, has as its mission “to be an internationally recognised centre of excellence in research and education on cheetahs and their eco-systems, working with all stakeholders to achieve best practice in the conservation and management of the world’s cheetahs”. CCF undertakes basic research regarding cheetah and their habitat; maintains a major public education programme and creates and disseminates education materials worldwide; conducts programmes of community upliftment and predator conflict resolution; and assists in the management of captive and free-ranging cheetah throughout the world.

CCF's base of operations is in Namibia, which has the largest and one of the few sustainable populations of free-ranging cheetah in the world. The cheetah's survival depends on a total ecological system of farmland management, prey species management, and habitat stability. CCF's Namibian focus is to work with livestock farming communities in order to develop ways to reduce conflict. This is achieved by devising a conservation plan that secures habitat for the species, while still accommodating farmers' land use needs. CCF carries out scientific research programmes in areas such as cheetah population biology, cheetah ecology, cheetah health and reproduction and human impacts on the cheetah. CCF researchers develop, test, and promote alternative land management practices such as; non-lethal predator controls, relocation of problem cheetahs, and eco-tourism. Additionally, CCF conducts both Namibian and International Education Programmes to raise awareness of the cheetah's endangered status. These illustrate ways in which the species can be protected and encourages worldwide support.

II. ORGANISATIONAL STRUCTURE

The Cheetah Conservation Fund is an international organization with chapters in the United States, the United Kingdom, and Namibia. In 1991 CCF became a Namibian Voluntary Trust, with a Namibian Board of Directors comprised of leaders in the local community, business, agriculture and government. In 2001 the Board registered the Cheetah Conservation Fund as a not-for-profit company. Additionally, there is an International Science Advisory Board that assists in planning and advising on research projects. The Director is assisted in the management and operations of CCF by a small core staff, short-term volunteers, and students.

CCF's International Research and Education Centre is the base for all CCF's activities. The Centre is located near Otjiwarongo, Namibia on the farms Elandsvreugde, Osonanga, Khayam's Kopje, and Cheetah View, totalling 24,860ha. The farm base is in prime cheetah habitat and a wildlife friendly area, with neighbouring farmers who believe in conservation ethics. This ensures a large prey population, which is important for the cheetah population. CCF is an active member of the Waterberg Conservancy, which encompasses over 200,000 ha of private farmland surrounding the Waterberg Plateau Park - a national reserve dedicated to rare and endangered species. The Conservancy's farmers co-operatively manage the Conservancy's wildlife for long-term sustainability. This in turn provides habitat and prey base for the cheetah.

CCF remains an active member of the Otjiwarongo community. During the past few months CCF's staff joined the volunteer fire fighters to assist with putting out multiple veld fires.

III. PROGRESS DURING REPORTING PERIOD: January – December 2001

A. Facility Developments at CCF's Namibian Research and Education Centre

Two farms were acquired through the generosity of CCF-USA donors. Osonanga Reserve is a 3732ha parcel at the base of the Waterberg plateau that is contiguous with the original CCF Research and Education Centre properties (Elandsvreugde and Osonanga Farming [owned by CCF-USA Board

member Carl Hilker]). Acquisition of Osonanga Reserve (which has no farm buildings), through the support of Art and Susan Babson from the United States, gives CCF stewardship of 14738ha of land directly adjoining the Waterberg Plateau Park. This qualifies CCF to apply as a Custodian for black rhino as part of a Namibian government programme. Our Conservancy neighbours favour this custodianship: it should increase their eco-tourism income and maintain their tolerance for cheetah on their farms. Basic vegetation surveys of the property are underway.

Farm Boskop, 5076ha, was acquired through the support of Annie and Bob Graham from the United States and renamed Khayam's Kopje. It is contiguous with farm Cheetahview and has been the object of comparative ecological studies. It has a farmstead that will be renovated for staff housing. Farm Cheetah View is used as a base for Round River Conservation Studies, a US accredited conservation biology field school, where students carry out various ecological research projects for a semester. In addition, this farm supports herds of cattle, goats and sheep as well as one of CCF's livestock guarding dog-breeding areas. In 2001 an intense bushfire breached the perimeter fuel break and burned perhaps 20% of the farm. No livestock or structures were lost and the impacts of the fire will be incorporated into the habitat-monitoring programme. The oldest of the two farm houses, which serves as the dormitory building for students, has been restored and the second farm house which serves as a lecture hall and lecturer headquarters has also been renovated. An old storage building has been converted and a new generator house has been built in a more practical location. Three workers' houses, supplied with running water and generator power have been built, replacing the corrugated shacks that previously served as accommodation for farm staff. Work is currently underway on upgrading the electrical and water systems. The Cheetah View renovation project has been sponsored by a grant from Ken and Gabriel Adleman in the United States.

Since completing the major renovation of CCF's Research and Education Centre on farm Elandsvreugde in July 2000, additional developments have been undertaken on CCF properties. These include the construction of a new three hectare cheetah facility with associated holding pens in an off-public access area of the farm, and the upgrading of the abattoir and cheetah feed preparation area to include a walk-in cold room and freezer. Carl Hilker built a new rondoal near the other main living quarters of CCF permanent staff. Landscaping in and around the Centre's gardens, public braai area and outdoor picnic grounds has continued, as well as upgrading the electrical system and building a computer network within the Centre. Additionally, perimeter fences have been cleared to serve as fire breaks and basic road maintenance has been completed. CCF's Education Centre is open daily from 9am to 5pm.

B. Basic Research

1. Population Biology

The Fund conducts field research to gather data on distribution, behaviour, biology, demographics and the overall health of the cheetah population. Farmers participate in CCF's research through live capture of cheetah on their farms, assist in collecting biological samples and measurements, ear tagging, radio collaring, and release. They also report other cheetah/livestock interactions. CCF's Director, Laurie Marker, and Senior Research Assistant, Bonnie Schumann, work directly with farmers and cheetah issues. Other CCF staff and volunteers assist.

CCF worked on a total of 78 cheetahs, several of which were worked on multiple times. Thirty (16M.14F) of these were tagged and released back into the wild, three of which were newly radio-collared. Of the 30 cheetahs tagged and released during this year, 14 were caught on game farms and 16 were caught on livestock farms. Fourteen (7M.7F) were re-captured, having been tagged either this year (n=10) or previous years (n=4). Three were tagged originally in 1999, one of which was radio-collared and the collar had stopped transmitting after a year. This cheetah was re-collared and radio tracking was resumed. He had travelled over 30 farms during the first year of tracking. Necropsies were performed on 12 (9M.3F) cheetahs. Fourteen (5M.9F) cheetahs were reported killed but were unavailable for necropsy, although samples such as skeletons and skin were collected in

some cases. Eight (4M.4F) orphaned cheetah cubs were placed into captivity, and one adult female that is pending release was placed at the Africat Foundation. Blood was collected on four captive cheetah cubs living captive at another farm. Fifteen of the cheetahs worked on were captive residents at CCF during their annual physicals, in preparation for ten of them to be relocated to the United States. Four (2M.2F) are in holding pending release following severe foot injuries. This includes a male that was left in the full January sun resulting in burns to his feet, in addition to the pads being ripped off one of his feet. It also includes a female and her two adolescent cubs (about 14 months old) that CCF received from a game farm where they had been held for nine months in captivity following their capture in the game camp. The female's back foot was badly infected and has recovered well following intensive treatment.

Of the dead cheetahs CCF dealt with, four (3M.1F) were trophy shot on game farms (two were necropsied, two not). One of the male cheetah's CCF had radio-collared was shot by a game farmer. Two (1M.1F) cheetahs were accidentally run over, of which one had been ear-tagged when 14 months old in June 1998 and had been re-captured and released twice since then. Four (3M.1F) cheetahs were killed by two livestock farmers. One male cheetah was a captive animal that was euthanised due to complications following a knee ligament replacement operation in November 1997, when he and another male were gin-trapped by a game farmer. A necropsy was performed after CCF helped capture one of two starving cheetahs reported by a game farmer. The second cub was found dead in the vicinity of the trap cage but was too decomposed for necropsy. One of the cheetahs CCF was unable to necropsy (vultures had reached the carcass) was a female cheetah that had been treated for almost five months for a severely injured foot caused by a gin-trap. Following the amputation of a badly damaged toe, the foot healed well and the female was radio-collared and released with her two cubs. She died of unknown causes about three weeks later. The adolescent cubs (1M.1F) were recaptured two farms away and are in holding at CCF as they are too young and inexperienced to survive by themselves.

Two of the female cheetahs CCF was radio-tracking were shot; both had been tracked for almost two years. One had three one-year old cubs, but they were not seen and will most probably not survive. Cheetah cubs stay with their mother approximately 18 to 22 months, and losing the mother before then is usually fatal. She was shot on a game farm where, according to the farmer, she was found on a waterbuck kill. A livestock farmer experiencing smallstock losses killed the other cheetah. One of her approximately 15-month-old cubs was also shot and we do not know what happened to the other one. Unfortunately, CCF was not called in time to perform necropsies on these cheetahs, but both radio-collars were returned.

In addition a farmer reported shooting a cheetah that was tagged and released at the Neudamm Agricultural College in Windhoek in October 1999. Five (2M.3F) cheetahs were killed that were related to groups of cheetahs CCF collected. In two cases, female cheetahs broke their necks in the trap cage, while the other three were siblings that were shot and the remaining live cheetahs were collected and brought to CCF.

Eight (4M.4F) orphaned cheetah cubs went into captivity (holding at CCF). Three of them suffered from health problems presumably induced by poor trap cage conditions. They were endoscoped at a veterinary clinic in Windhoek following chronic vomiting. All three required treatment for inflamed stomach linings, including a bleeding gastric ulcer in one case. Their condition has improved greatly and they are due to be endoscoped in January to assess their health. One of these cheetahs also had a badly broken canine that, following a root canal, abscessed and required intensive treatment.

2. Health and Reproduction

CCF collects biological samples to assist in evaluating the health of the cheetah population. A full biomedical collection of two sets of samples, including vital organs, lymph nodes, bone, muscle, skin and reproductive tract are taken on all necropsied animals as well as blood, skin, and morphometric

measures on live animals. Semen samples are collected from male animals. The information gathered from the sperm is used to monitor the genetics, virology and morphology of the species and to contribute to a genome resource bank. All samples are meticulously stored and serve as a reference database for future studies. Skeletons are cleaned, labelled and stored for future studies.

Collaborative research continues with Drs. Linda Munson and Karen Terio investigating faecal cortisol levels in relation to the effects of stress on captive and wild cheetahs. Faecal samples are collected from captive resident cheetahs at CCF to monitor the effect of movement between enclosures and in large versus smaller enclosures. Playtree samples are collected to assess cortisol levels in free-ranging cheetahs, as well as faecal samples from trap cages. Samples are collected on all wild cheetahs until they are released again. Dr. Munson, investigating gastritis in captive cheetahs, also collects samples on resident captive cheetahs prior to endoscopy.

CCF collaborates with other researchers and institutions from the United States, Europe, Namibia and South Africa. This collaboration has allowed experts in genetics, reproduction, veterinary medicine, pathology and conservation to work with CCF thus expanding the use of this valuable data. To date, over 480 cheetah have been sampled, several multiple times, and an extensive database has been developed, with new data continually being added. During 2001, samples on 45 cheetahs were added to this database.

CCF research collaborator and Scientific Board member Dr. Linda Munson visited from the University of California at Davis and worked on several papers including the health status of the cheetahs CCF has necropsied over the years. Having access to dead cheetahs that have been trophy hunted, hit by cars or shot by farmers enables a thorough examination and collection of all internal organs and tissues, facilitating certain studies on overall health and diseases that would otherwise not be possible.

3. Cheetah and Other Predator Ecology

a. Cheetah

CCF is currently tracking four (1M.3F) cheetahs, of which two females have adolescent cubs and the third, according to her movements may have just had cubs. During the course of the year, three collared cheetahs were shot, two collars stopped transmitting, one collared cheetah was run over and the remains of two were collected (cause of death unknown). One of these (a female) had been tracked for over six years and the cause of death is unknown, as it was several weeks before we were able to meet with the farmer for permission to fetch the collar. At the time of this report, one of the collared female cheetahs is on the farm of the President of Namibia.

Several radio collars have provided us with long-term data, one of which we are still monitoring. This female cheetah has been followed since 1994 just southwest of Otavi, and covers over 2,000km² annually in her home range. We have found that over time home ranges vary and change, not remaining the same each year, so that in total she has covered an area of over 4,000km². This female's signal came to a stand still on the President of Namibia's farm. CCF staff was given permission by the President to ground track the cheetah to determine if the cheetah was dead or alive but stationary with new cubs. Fortunately, the female was alive and presumed to have cubed due to her stationary behaviour.

The information gathered from these cheetahs is particularly valuable as we have tracked them through multiple litters, extremely dry years and the last two years of very good rainfall. This data provides us with information to calculate inter-birth intervals and estimated survival, and is currently undergoing analysis that will provide information useful for the Namibian cheetah census programme.

During the past six years of this research, over 50 cheetahs have been collared. These radio-collared animals have actually provided information on more than just the animal collared, as some of the females have cubs and many of the males are part of coalitions (male groups). Radio-collared animals are tracked weekly by fixed-wing aeroplane. Radio-telemetry is a powerful tool and is important to CCF's work with the farming community. The data collected from the tracking is used to show the farmers the actual movements of the cheetah through their land. The information collected also illustrates where cheetahs are in relation to the farmer's calving herds, indicating areas on farms that attract cheetahs and the duration of time spent in an area. Furthermore, it demonstrates to farmers that cheetahs range over large distances and that an individual animal may be seen on many farms.

b. Caracal

One caracal was tracked for the first half of 2001 and the collar stopped transmitting. During the second half of the year, the caracal was accidentally caught in a cheetah trap on a game farm. Unfortunately, the trap was not checked and the caracal died of exposure.

c. Leopard

A young male leopard was caught by one of CCF's neighbours in the Waterberg Conservancy. CCF collected samples on the leopard and was asked by the farmer to house the cat at their leopard facility until a decision is made as to where the leopard should go. The young leopard was in poor condition and was caught attempting to catch calves. He is now looking much healthier.

4. Ecosystem Research

Assessment of the Namibian farmland ecosystem for long-term habitat viability for the cheetah and its prey is a part of CCF's on-going research. The farmlands support a rich prey base, as 70% of the country's game inhabits these areas. CCF assesses the farmland ecosystem and monitors the wildlife prey base available to predators in CCF's primary research area.

To assist in developing a programme for the Waterberg Conservancy's game monitoring CCF began an ongoing wildlife-monitoring programme on its farm, designed to understand game densities, movement, demographics, and habitat utilisation. The monitoring involves conducting visual road counts of game at regularly measured points throughout the farm at various times of the day, tracking and counting spoor, categorising vegetation types, densities and distribution, and soil analysis. EarthWatch volunteers assist with this research. These methods estimate the utilisation of the various sample areas within the farm, according to species identified. Analysis will provide valuable information leading to wildlife farming management decisions within the conservancy.

The Waterberg Conservancy held its annual full moon waterhole count in August. This year volunteers for the count were made up primarily of groups pre-arranged by CCF. All volunteers congregated at CCF's Research and Education Centre for orientation and meals. Fourteen volunteers from Earthwatch International joined CCF for the waterhole count and also participated in road strip counts and 12-hour waterhole counts before the 24-hour count. The Otjiwarongo District Youth Forum, the Khorixas Cultural Group, and a group of British volunteers from World Challenge also joined the count teams. For the second year, a group of young German volunteers from the Daktari farm assisted. The waterhole count provides an estimate of populations and density of various game species on the farms of the Waterberg Conservancy. The count also provides information on group sizes and population demographics, all vital to a long-term monitoring programme.

Working together with the Omiringa Conservancy, a pilot project was begun on the movement of eland on the farmlands. CCF provided two radio-collars and a receiver to conduct ground tracking, supported the veterinarian's costs, and developed the proposal to obtain the research permits. The helicopter time was donated. The Waterberg Conservancy, the Ngoragombe Conservancy, and

CANAM supported the project concept. The eland population travels between the three conservancies and this is a first step in multi-Conservancy game monitoring by the farming community.

Helmut Tjikurunda, a second year Natural Resource Management (Nature Conservation) student from Polytechnicon, conducted two research projects at CCF. The first project was a behavioural study on oryx distribution on the 1 600 ha field of CCF's farm Elandsvreugde. The second project overlapped the oryx study as an ecological study on the grass competition of the field. The survey was designed to see if there was a possible correlation between observed behaviours of the oryx and the composition of the grasses.

Other routine habitat monitoring took place including CCF's ongoing fixed-point photography.

C. Human Impacts on Cheetah

Livestock loss to cheetahs is an economic and emotional issue. While farmers perceive cheetahs as having an excessive economic impact on their livestock and wild game industries, many Namibian farmers have done little, from a management perspective, to alleviate their problems in a non-lethal manner. By addressing the farmer's conflicts with predators, CCF is devising a conservation and management strategy that benefits both humans and cheetahs, thus ensuring the species' survival on livestock farms. Through direct contact with individuals, farmer association meetings, and a bi-annual Farmer's Newsletter as well as a survey form and calendar, CCF informs the community of its progress and encourages it to remain actively involved in all aspects of its programmes. During this reporting period, two newsletters were mailed to over 2,000 people in Namibia, updating them on CCF's activities and research findings.

1. Livestock Guarding Dog Programme

CCF's Livestock Guarding Dog (LSGD) programme has continued to grow with nearly 120 Anatolian Shepherd Livestock Guarding Dogs working with livestock. Livestock guarding dogs provide a method of non-lethal predator control that protects the farmer's livelihood, while also conserving the predator species. The dogs continue to be monitored by CCF in a bi-annual evaluation of adult dogs and monthly evaluation of puppies for the first six months. CCF continues to be a breeding facility for these dogs.

CCF's Livestock Guarding Dog Programme was expanded with the birth and placement of three litters of puppies during 2001. Zanta, CCF's resident working dog gave birth to 13 puppies in February. All the puppies were placed when they were between six and eight weeks old by CCF staff Bonnie Schumann, Fanuel Ekondo and Matti Nghikembua. Five of these puppies were placed with commercial farmers and eight with communal farmers. In September a litter of 11 puppies was born on Cheetahview. Two of these died as a result of the bitch lying on them, five were placed in the communal area and four in the commercial area. The puppies from these litters have all been monitored, vaccinated, and the new owners continually advised on the correct management of their puppies during this critical first year of development and training. In December, a litter of seven puppies was born on the farm of Mrs Carla Meyer, a farmer assisting with the breeding programme. One died when the bitch lay on it. CCF staff will be placing the litter early in 2002.

All dogs were successfully spayed/neutered and returned to their respective residences. With the increasing number of Anatolians in Namibia, it was decided that all dogs should be tagged if possible. To-date 10 dogs were transpondered in the communal area and this exercise will continue next year.

Six dogs were repossessed and relocated. Of these, three were communal placements and three commercial placements. Reasons for relocation included neglect by the owner, behavioural problems the owner felt they could not solve, and failure of the owner to fulfil the requirements of the LSGD agreement that is signed on receiving the dog. Assistance and advice were offered and where these failed, it was mutually agreed that CCF repossess the dogs.

During visits to the communal farmers to vaccinate the puppies and monitor their progress, one puppy was returned to CCF due to a back injury. Following medical treatment, this dog worked with CCF's herd so that his recovery could be monitored and a new placement was found. CCF brought a second dog back to CCF from one of the farms as it was not being cared for by the farmer and was living at the kitchen of an adjacent farm. Upon its return to CCF it began working with CCF's sheep herd and was working quite well. Unfortunately, this dog has not been thrifty and is currently at the veterinarians undergoing tests to understand its health problems. A third dog was brought back to CCF for chasing calves from the goatherd. This dog has been working at CCF and is scheduled for placement after the 1st of the year. CCF has been made aware that there is some jealousy within the communal area by farmers who do not have Anatolian Guarding Dogs and have intentionally accused the dogs of wrong-doing. Therefore, any complaints received will be followed up with proper investigation. Mr. Sammy Upora, Ministry of Environment official in Okakara and Livestock Guarding Dog project partner, has worked closely with CCF staff in making the dog programme a huge success in the Eastern Communal land.

Two commercial farms were visited, one included multiple visits, to investigate and assist with dogs having behavioural problems. The dogs were followed by CCF staff Mandy Schumann into the veld with their flocks to assess the strength of their bond with the livestock and their overall behaviour. With one dog, corrective training was implemented with the use of a dangle stick and the dog is now working well. With the second dog the bond appeared non-existent with the stock and the dog was observed actively attempting to hunt. After a few trials of corrective training attempts, it was recommended that the dog be pulled from livestock guarding, or continue only under the supervision of a herder. Subsequent to this monitoring and close supervision by the farmer, this dog has resumed its previous "good" behaviour and is again working with the herd.

CCF staff attended several of the annual agricultural shows and promoted the use of livestock guarding dogs. As a result of these shows, 52 direct enquiries for more information and potential livestock owner application forms resulted. Queries are still being received subsequent to the show visits.

2. Poisons and Conflict Resolution Workshops attended

CCF staff attended a two-day workshop on the impact of and responsible use of poisons in the environment. CCF was one of the major sponsors of this workshop by supporting international travel expenses for one of the poison specialists from the Endangered Wildlife Trust of South Africa. The irresponsible use of poisons has been identified in Namibia as a serious problem and is of particular concern, as so many non-target species are being affected. A second workshop was held Otjiwarongo which CCF staff and CCF students from the Polytechnic, University of Namibia, and Round River Conservation Studies attended.

CCF's Bonnie Schumann attended a three-day workshop in Windhoek titled: "Reducing Conflicts Between Wildlife and People". The primary aim of the workshop was to bring together all stakeholders involved in community based natural resource management (Community leaders, Government Officials, NGO's and the Private Sector) in Namibia to share experiences of conflicts with wildlife and jointly explore ideas of how to minimise such conflicts and optimise benefits.

3. Bush Project

CCF has been awarded a USAID grant to improve cheetah habitat through utilisation of the thickened bush that has overtaken much former cheetah farmland habitat. CCF's Dr. Bruce Brewer has been working closely with USAID on this granting process. The overall goal of the project is to enhance the long-term survival of the cheetah, and other key indigenous Namibian wildlife species, on Namibian farmlands by developing a habitat improvement programme that is both ecologically sound and economically viable. Bush encroachment reduces the hunting efficiency of cheetahs and the thorns can seriously injure the cats, including blinding due to hunting in thick bush. In addition, thick bush reduces the populations of the cheetah's natural prey species (primarily springbok) and other wild game species (oryx, eland, and red hartebeest, for example). Farmers experiencing economic hardship due to bush encroachment are less likely to tolerate livestock predation and more likely to remove cheetahs.

CCF will test and monitor methods of harvesting thickened (encroached) bush and design a scheme that is appropriate to farmland habitat and is beneficial to Namibians. In addition, CCF will develop a market for bush-based products that assures the long-term sustainability of appropriate levels of harvest. Within Namibia, a fire log product will be marketed as an affordable alternative to wood harvesting. Depending on the results of this pilot project, habitat restoration efforts could be vastly scaled up to restore cheetah habitat on an ecologically appropriate scale. The overall design of the project is a pilot study that integrates ecological studies with community-based conservation through economic development. The resulting fuel log will enhance global conservation education through conservation-oriented marketing and informational labelling, and the areas cleared will directly and indirectly benefit cheetahs, by restoring habitat and providing income for further conservation activities.

Baseline surveys are underway on small mammal populations and vegetation on farms Elandsvregde, and Cheetah View. A total of six hectares of vegetation has been demarcated for vegetation studies. The aim of this survey is to ground-truth a satellite image of vegetation. Dr. Richard Jeo, CCF's Chief Ecologist, is currently working on this data and on a vegetation map to classify the vegetation.

Several meetings took place during the year with USAID delegations as well as with the Namibian President, His Excellency Dr. Sam Nujoma, and his Ministers of Agriculture and Environment and Tourism. This project is one of the President's highest priorities.

4. Large Carnivore Management Association

CCF staff regularly attends meetings of the Large Carnivore Management Association. The Group consists of members from MET, NGO's, farmers and veterinarians concerned with carnivore conservation. Issues that have been dealt with in the last year include legislation on carnivores, captive holding, the value of live animal exhibits at agricultural shows, trophy hunting, and guidelines for animal use in the film industry.

5. Government Meetings

His Excellency, Namibian President Dr. Nujoma, CCF Namibia's Patron, donated a group of 10 non-releasable cheetahs to breeding facilities in the United States in April. Cooperation between the Ministry of Environment and Tourism working under CITES guidelines allowed this export to support their *in-situ* conservation programme and to provide new genetic bloodlines for this managed captive population of cheetahs.

CCF staff met with His Excellency, the President on two other occasions during the year. One to inform him of how the transport of the cheetahs went to the US and the other was to discuss CCF's annual activities.

D. Community Outreach

CCF believes that conservation programmes and efforts will not succeed if the targeted communities are not benefiting. In Namibia, the communal farmers are dependent on livestock for their daily livelihood; therefore, livestock losses through predation have a large impact on their income generation. Predators are thus considered problems. The main “problem” predators in these communal regions are the black-backed jackal, leopard, caracal lynx, wild dog, and cheetah. Livestock and predator conflicts in these regions are common because there is not enough wild game in some of the communal areas to support the predators. With this in mind, CCF is actively involved in the development of conservation programmes in the communal regions, primarily the Eastern (Hereroland) and Western (Damaraland) communal areas.

CCF Community Officer Don Muroua resigned to accept a position training community game guards in the Damaraland Region. His duties were largely taken up by Siegfried Aebib who left the Ministry of Youth and Sport to become CCF's Community and Youth Relations Officer.

1. Outreach Programmes

Youth from Khorixas, Usakos, Swakopmund, Otjiwarongo, Kamanjab, Anker, Erwee, and Omaruru visited the Cheetah Conservation Fund (CCF) during 2001. Organised programmes at the Centre were designed mainly for groups accommodated at CCF's Wilderness Camp. The Wilderness Camp can now accommodate 24 people overnight in 12 huts. All groups visiting CCF are given an in-depth presentation and are exposed to the Namibian farmland ecosystem through the Nature Trail. Team building activities are designed for various reasons, signifying the importance of team efforts in conservation. Role-play and drama were also included in the programmes. These included scenarios of livestock and predator management.

CCF's Education Centre continues to receive visits of youth, tourists, teachers, farmers, conservation and agriculture extension officers, and the public. During the year, various presentations were done for public, farmers, and youth groups and youth officials. In addition, two were at official functions: a book donation function with the Ministry of Basic Education and Culture and Sport, and the official opening of the Kunene Regional Youth Forum meeting at Wereldsend.

Siegfried Aebib and Research Assistant Fanuel Ekondo helped the communities in Okondjatu to discuss forming a conservancy in that area. Different traditional leaders and communities in the area are pooling their resources in order to manage, utilise, and benefit from their wildlife and other natural resources. During the evening, CCF presented a video to the community which was attended by close to 500 people, mainly school children and community members. Here the video was stopped at times to thoroughly explain the events shown and how they influence the day-to-day life of human beings.

Although CCF has a very active community development programme, it was identified that more information was needed to understand the needs of the local Eastern Communal lands. In order to obtain this information Ignatius Hindjou, a third year student from Polytechnic in Natural Resource Management (Agriculture), conducted a baseline survey to determine the needs and livestock management practices in the four communal sub districts of Okondjatu, Okamatapati, Okakarara and Okotjtu. Meetings with farmers enabled CCF to create awareness about the cheetah and the indispensable role predators play in the ecosystem. Most farmers felt that cheetahs deserve a chance in the wild, however lasting solutions to farmer-predator conflicts are long over-due. At the same time, farmers have shown a keen interest in the Livestock Guarding Dog programme.

CCF visited three farmers associations during the reporting period. The Dorsland Farmers Association is the biggest farmers association in Namibia with 70 members. The Epikuru farmers Association requested a talk with “The Farmer and Problem Animals” as the topic. The Dordabis Farmer Association requested a combined talk on conservancies, as well as information on cheetahs since many of the association members also belong to the Dordabis Conservancy. They were interested in

how other conservancies functioned. CCF's director and vice-chair of the Conservancy association of Namibia (CANAM), Laurie Marker, presented an overview on conservancies while Bonnie Schumann presented an overview of CCF's work. CCF staff was warmly received by the farming community, joining the farmers for a social gathering afterwards, providing a good platform for informal discussions.

CCF attended both the Okakarara and Otjinene Agriculture shows. At the Otjinene Show, CCF staff joined with the Harnas Wildlife Foundation, which brought two lions, a leopard, a cheetah and three baboons. The showgoers flocked to the Harnas and CCF stand as soon as it was announced that people could go and watch the predators. Close to one thousand people ranging from farmers to school children and parents visited the stand and asked questions about cheetahs and leopards as well as lions. This was a good opportunity for people who could not differentiate between a leopard and a cheetah. The combination of two stands proved to be very useful as both organizations are directly involved in carnivore conservation. Many farmers were interested in the Livestock Guarding Dogs programme, and requested that CCF have an Anatolian dog for the shows to come. Many people also expressed interest in visiting the Cheetah Conservation Fund. In the evening CCF presented a video show to farmers depicting CCF's approach on conserving cheetahs and working together with farmers.

During September, CCF staff crossed Namibia to attend the Windhoek, Swakopmund, Otjiwarongo, Gobabis, and Grootfontein Agricultural Shows. CCF's exhibit focused on predator friendly farming practices and CCF's public Education Centre.

CCF participated in the evaluation of the National Youth Conservation Corps project run by the Ministry of Higher Education, Training and Employment Creation. The evaluation will help strengthen the programme in order to encourage youth development in Namibia.

CCF helped organise the Earth Day Art Competition to celebrate world earth day with an arts theme. Various prizes were offered, including an overnight stay at CCF's Wilderness Camp trip for the 24 winning youth.

2. Waterberg Conservancy

CCF remains active in the Waterberg Conservancy. In particular, CCF staff attended several meetings to discuss and develop wildlife monitoring techniques and the development of the Conservancy's Master Plan. In addition, CCF continues to promote and support eco-tourism within the Conservancy. Several international tour groups visiting CCF, including private tour groups, zoos and museums, over-night for one or two nights at Conservancy guesthouses thus providing revenue to this region in the name of the cheetah.

3. Conservancy Association of Namibia (CANAM)

CCF's Director, L Marker, has stepped down as the vice-chair of CANAM, after her two-year term was completed. CANAM is an umbrella body for the promotion of conservancies in Namibia. Conservancies encourage sustainable utilisation of natural resources through co-operative management, based on sound conservation principles. During the reporting period, Marker attended two Ex-com meetings, and attended the AGM. Conservancies and their wildlife management techniques will continue to be extremely important for long-term cheetah conservation. Of concern was that CANAM's new ex-com committee has decided not to join the newly organised Large Carnivore Management Association. In November, CCF hosted a CANAM Master Plan development meeting. Representatives attended the meeting from 16 of the 23 commercial conservancies.

4. Otjiwarongo Tourism Association

CCF has been one of the key players in assisting the Otjiwarongo Tourism Association in regional marketing. During this reporting period, the Association hosted its second familiarisation (FAM) trip, which included members of the international travel writer's community and tour operators. CCF and the Waterberg Conservancy hosted a day at CCF ending with a braai in the evening. From this FAM trip, a regional video was developed and translated into four languages. His Excellency, Dr. Sam Nujoma, Namibia's President, launched the video during a media event in Windhoek. Further developments with the Association include marketing Otjiwarongo as the Cheetah Capital of Namibia.

In October, the Otjiwarongo Tourism Forum officially launched its "Meeta Cheetah" campaign. This campaign is to encourage tourists and tour groups to visit the "Cheetah Capital of the World", Namibia, and stay overnight in the heart of cheetah country, the Otjiwarongo area. The launch took place in London at the Namibia High Commission and was attended by CCF director, Laurie Marker, and Neville Neveling, chair of the Otjiwarongo Tourism Forum. Part of the campaign includes buying a fibreglass cheetah and painting it in your choice of colours and patterns

5. Namibian Professional Hunters Association and Cheetah Trophy Hunting

CCF continues to cooperate with NAPHA members and other landowners in their role in cheetah conservation programmes that are necessary to support sustainable use of cheetahs.

6. Wilderness Workshop

In September, CCF hosted the week-long basic Wilderness Management Training course presented by Namibia's Wilderness Action Group. Course participants consisted of members of the public, private enterprise, NGO personnel, and Ministry of Environment and Tourism staff. This course includes a basic introduction to the concept of wilderness, its history, and legislation. Two members of CCF staff attended the course.

7. Cheetah Conservationist of the Year

At this year's CCF annual fundraising dinner, "A Celebration of Speed and Elegance" we chose two farmers as the Cheetah Conservationists' of the Year. Both embrace the concept of conservancies and practice conservation through collaboration and the sharing of natural resources in a neighbourly way, combining cattle farming with selective hunting and Eco-tourism. Harry Schneider-Waterberg, Chairman of the Waterberg Conservancy and the Chairman of the Conservancy Association of Namibia (CANAM), and Jorg Diekmann, Chairman of the Ovipuka Conservancy, a member of the Waterberg Conservancy, and served on the founding Ex-com of the CANAM, have both been very active supporters of Cheetah Conservation for nearly a decade. Jorg and Harry have shown, through their management practices, that predator conservation is not contrary to the needs of humans, and that we can all live together.

E. Education Activities

Public education and the development of an active grassroots constituency are integral components of the overall cheetah conservation programme. CCF is educating farmers, teachers and the public about the need and methods to conserve Namibia's rich biodiversity and the role of the cheetah and other predators in healthy ecosystems. Public education and the development of national pride in the cheetah are critical to its survival in Namibia.

CCF's Education Centre Curator, Graeme Wilson, and Education Officer, Matti Nghikembua, organise and direct education programmes. During this reporting period over 2000 students and youth group members attended a CCF programme either at the CCF Centre, at their school, or in their

community. During the past six months, CCF expanded its education department to include staff to greet daily visitors at its Education Centre.

1. Schools and Community Education

Groups have visited and taken part in a standard two-day education programme with a total of 347 participants staying at one of the two education camps. At the end of 2001, CCF's education programme is fully equipped with all its required infrastructure and activities to aim at having more than 1000 participants visit and stay at CCF's camps next year.

CCF's Research and Education Centre provides on-site public education and student training to local students of all ages and foreign university students. It allows students to be exposed to CCF's integrated research programmes on the cheetah's ecology, habitat and prey base, and the demonstration of CCF's non-lethal livestock/predator management techniques. CCF's Education Centre and Wilderness Camp hosts school and community groups, exposing them to different environmental education activities including a Nature Trail, games, and other environmental awareness activities. Learners and visitors from various regions visit the Centre. In the past six months over 400 groups have visited CCF's newly developed Education Centre.

The Centre continues to receive visitors from schools, regional youth groups, youth officials, tourists, teachers, health officials, farmers, conservation and agriculture extension officials, students and the general public. The most significant participants were youth groups and schools from different regions of the country. Participants are exposed to the issues affecting the survival of the cheetah, by participating in various interactive activities and presentations. Various issues are presented regarding factors that affect conservation efforts at community level.

Organised programmes at the Centre were designed mainly for groups accommodated at the wilderness camp. All participants were exposed to CCF efforts by presentation. Participants were also exposed to the Namibian farmland ecosystem through the nature trail. Team building activities are designed for various reasons, signifying the importance of team efforts in conservation. Role-play and drama were also included in the programmes. These included scenarios of livestock and predator management. The team building obstacles in CCF's new predator playground will in the future be developed further, thus broadening the scope of the education programme.

Young Namibians from across the country participated in CCF's educational programmes and stayed at the Wilderness Camp. The Windhoek International School, the Tsumeb Boy Scouts and Tsumeb German Private School, Paresis Secondary School from Otjiwarongo, the Welwitchia Primary School from Khorixas, and Otjiwarongo Youth Forum all enjoyed this unique educational experience. The Enviromessengers also stayed at the Wilderness Camp while working on Drama presentations that deal with wildlife and human conflict resolution issues.

Environmental clubs from Paresis and Okakarara Secondary schools were involved with the Round River Conservation Programme. This included learning about the ecology and natural history of the farmland that supports the survival of the cheetah, and also helping with the field surveys conducted. The research projects conducted by the students included bird surveys, animal density and movement, and distribution and densities of tree, bush, and grass species. The visiting Okakarara Nature Club attended various lectures held by Round River Conservation Studies at CCF's Cheetah View farm. The experience gained by the learners was of a great benefit because it allowed them to be exposed to research, ecology, and natural history of the farmlands.

Members of the Seattle, Washington (USA) CCF Chapter have become special 'Friends of Rogate', after donating over 200 books to the Rogate Primary School in Otjiwarongo. In July Jason Raize, who played Simba in the Broadway musical "The Lion King," presented the books representing a wide variety of topics to the school. During his visit, Jason sang a few songs to the students who then

sang several songs back to Jason. Accompanying Jason were CCF's Matti, Siegfriedt, and Laurie. The presentation was filmed by Sue Anne Taylor, producer with Blue Hereon Productions. Jason Raize joined Taylor in Namibia as the presenter of a TV special for youth highlighting CCF's efforts.

2. CCF In-service Training and Field School

Thirteen students from throughout North America completed the third and fourth course of Round River Conservation Studies field school at CCF during January to April and again from September through December. The student groups each spent three months learning conservation biology, ecology, and the natural history of Namibia under the guidance of CCF Senior Ecologist Dr. Richard Jeo. Round River Conservation Studies is linked to Utah State University and has developed partnerships in field conservation focusing on predators and monitoring of prey species. Two Namibian biology students from the University of Namibia were given scholarships to attend the Round River programme.

Two University of Namibia Bachelor of Science Agriculture students completed a six week internship and practical work experience at CCF during January and February. Both students undertook both practical and theoretical training and worked on a livestock management plan for CCF's goats and sheep. Two Polytechnic of Namibia students from Natural Resource Management participated in a six-month in-service training at CCF. Both students conducted their own projects as discussed. In addition, two students from University of Oregon's Global Graduates programme conducted three-month internships with CCF. During their time at CCF all interns participated in all aspects of CCF activities.

Students from the Ongongo Agricultural College (Agriculture and Forestry) visited CCF for a day visit. The possibility of students from this college doing internships at CCF was discussed.

During April this year the University of Namibia Conservation Biology class visited CCF. This trip was a cooperative venture between the University and the Round River Conservation Studies programme, providing Namibian and American students with the opportunity to exchange ideas on conservation. From this visit, an extended University of Namibia Conservation Biology course is being developed for 2002.

3. Education Workshops

Siegfriedt Bandu Aebeb, CCF's Community Development Officer, was invited to attend the three-day venture selection weekend held at the Raleigh field base outside Windhoek. Raleigh, the British leadership volunteer programme, brings youth between ages 18 and 24, to Namibia for three months to participate in conservation and development projects. Namibian youth are recruited to participate in their programmes. During the selection weekends, all previous Namibian venturers are invited to assist by acting as facilitators, assessors, and co-ordinators. Siegfriedt was a venturer in 1997 and helped to build CCF's Wilderness Camp. Altogether, 120 youth from all over Namibia vied for the chance to join the October expedition.

Graeme Wilson, CCF's education curator, was elected as a committee member and Namibia Environmental Education Network (NEEN's) country representative to the Environmental Education Association of Southern Africa (EEASA) at the NEEN Annual Conference held in Windhoek. He attended the EEASA annual conference, "Environmental Education for sustainable development African perspectives" in Lesotho.

Graeme and CCF volunteer Dr. Sandy Ball attended an educational workshop in South Africa organised by Cheetah Outreach and the Smithsonian's National Zoo. The workshop brought together South African educators to develop cheetah conservation based curriculum. CCF's Teacher's Guide was handed out to the teachers as a reference.

4. Staff Education

CCF's director, Laurie Marker, is currently enrolled as a Ph.D. candidate at Oxford University in the Zoology Department's Wildlife Ecology Programme, known as WILDCRU, under the supervision of predator specialists Drs. David McDonald and Gus Mills. In April, her two supervisors spent several days at CCF to discuss her research and progress on data analysis and publications. Laurie then spent two weeks in Oxford continuing with data analysis. Four papers are nearly ready for publication. It is envisioned that she will complete her studies and final write up of her dissertation by the end of 2002.

CCF's Education Officer, Matti Nghikembua is currently enrolled in the B-Tech Nature Conservation programme at Polytechnic of Namibia. His course work has continued and he will be starting his research project on base-line studies of bush encroachment and harvesting in the next few months.

F. International Programmes

The Fund assists in international programme development and adapts model programmes developed in Namibia for use in other countries, distributing CCF materials and information throughout Africa and the rest of the world. CCF's director is a member of the core group of the IUCN's Cat Specialist Group and maintains international communications on the status of cheetah populations worldwide, including their relationship with man and threats to their survival.

1. Kenya Cheetah Conservation

CCF was asked to help assess the cheetah situation in Kenya, where populations have been reported to be declining. In March L. Marker travelled to Kenya with Mary Wykstra-Ross, a CCF research assistant, to investigate the cheetah situation, focusing on the Nakuru Forum/Conservancy area located in the central portion of the Rift Valley. The goal of this initial visit was to provide an overview of habitat, prey base, human impact, predator conflict, conservation potential and need, and existing research, to evaluate whether CCF might be able to assist with cheetah conservation efforts in Kenya.

During the trip they met with members of the Nakuru Wildlife Forum, which comprises approximately 360 000 acres and includes commercial farms, group farms, and game/national parks. Conservancy farmers report that they are seeing fewer cheetahs. The cats that have been sited on conservancy lands in the last few months are believed to be migratory, not resident, animals. As the farmers believe cheetahs have only a minimal impact on large- and small-scale livestock farming, they would like to support conservation studies on cheetahs, with the goal of using their presence to attract tourism to the area.

After leaving the forum area, the next couple of days were spent with researchers at the Mpala Research Centre in the Laikipai District in northern Kenya, where senior scientists and undergraduate students conduct studies of habitat, wildlife, and ranchers to provide a broad ecological base for wildlife conservation in Kenya. Time was spent with Drs. Laurence Frank and Rosie Woodroffe, who direct the Laikipia Predator Project. The Laikipia farmers acknowledged that cheetahs are little threat to their livestock. They have noticed a decline in cheetahs and would like to have more.

L. Marker gave a presentation at the Kenya Wildlife Services (KWS) headquarters in Nairobi about cheetah conservation efforts in Namibia. CCF was asked by the KWS to assist with a project in the Masai Mara, so Marker and Wykstra-Ross went to the Masai Mara with a KWS researcher. The project there will study the impact of tourism on cheetahs. Over the past few years, cheetah numbers have decreased, and this study, a cooperative project between the tourism industry and KWS, will assess the situation.

During this trip, CCF staff laid a solid base to begin work in Kenya. In collaboration with the ongoing projects, CCF will be assisting in the understanding of predator-human conflicts through additional studies in the Nakuru region. Although the number of cheetahs in the region appears to be quite low, this area could aid in better understanding the impact of human population and commercial farming

on Kenyan wildlife populations, especially the cheetah. Kenyan farmers were eager to learn how Namibian farmers minimized livestock loss from predation, as, throughout the world, Namibian farmers are considered models for coexisting peacefully with predators.

Since this initial trip, CCF has been involved with the Kenya Wildlife Service to assist in developing a poster that will be put up throughout Kenya, and in particular in the game reserves, to ask tourists to assist in cheetah conservation programmes. In December Wykstra-Ross moved to Kenya to set up CCF-Kenya operations.

2. South Africa Cheetah Conservation

CCF was asked by the South African Cheetah Management Group to begin a survey with the farming communities in the North and Northwest Provinces of the country. Research Assistant Mandy Schumann spent two months based out of Hoedspruit Cheetah Centre and the DeWildt Cheetah Breeding Centre. Both facilities provided logistical support including a vehicle and phones. The purpose of the survey is to acquire baseline information on the farmer's attitudes towards cheetahs and the possibilities of cheetah conservation on their lands. Mandy was in communication with several farmers' organisations and shared information about cheetah conservation activities in Namibia.

3. Iranian Cheetah Conservation

In November CCF's Director, Laurie Marker, along with CCF research advisor, Cindy Olson, were invited by the Iranian Department of Environment (DOE) to assist with the development of a cheetah conservation community based education programme. This project will be in joint association with the work of researchers at the New York Bronx Zoo's Wildlife Conservation Society (WSC) and their Science and Exploration Program Director, Dr. George Schaller, who just returned from a month's preliminary survey. As a result of this visit, Laurie and Cindy will conduct follow-up meetings with the core cheetah interest group that has developed, and assist the DOE with the next step in the research and conservation programme.

While in Iran, Laurie and Cindy were hosted by the past Indian Ambassador to Namibia. They had meetings with various researchers and DOE officials. The purpose of the mission was to identify where CCF can best assist Iran in saving its endangered cheetah population. Cheetah numbers have declined to perhaps less than 50 animals, from around 500 animals in the 1970s, due to widespread poaching of cheetahs and their prey during the early years of the 1978 revolution. Additionally, habitat degradation due to livestock grazing has pushed this important predator to the brink of extinction.

4. Captive Cheetah Management

a. International Cheetah Studbook

CCF's Director, Laurie Marker, is the Keeper of the International Cheetah Studbook. The Studbook is a registry of all cheetahs living in captivity and serves as a guide for regional and global captive breeding programmes. Bi-annual questionnaires are sent to all registered cheetah facilities each year. The 2000 International Cheetah Studbook is being finalised for publication in 2002.

b. Export of cheetahs to USA

His Excellency, Dr. Sam Nujoma, presented 10 young cheetahs as a gift to the people of the United States in April, in recognition of U.S. support of cheetah conservation in Namibia. The gift marks the first time in nearly 30 years that the laws of both the United States and Namibia have allowed wild-caught cheetahs to be exported from Namibia to the United States.

Four of the cheetahs are housed at the Cincinnati Zoological Gardens in Ohio. The other six have gone to the White Oak Conservation Centre in Florida, which specializes in breeding rare and endangered species. All 10 cubs, orphaned when their mothers were shot, were caught on commercial farmland areas and found their way to CCF through the concern of the people who caught them or through the speedy intervention of a concerned neighbour. CCF selected these 10 cheetah for export to the United States solely because they are non-releasable animals.

The cheetahs will be part of a cooperative breeding programme in North America called the Species Survival Plan, which is managed by the American Zoo and Aquarium Association (AZA). The SSP was established in 1982 and coordinates the management of all captive cheetahs at the different facilities in North America as a unit. Working with this programme, all the facilities holding cheetahs cooperate on issues concerning reproduction, genetics, diet and general husbandry of the species.

G. International Meetings

1. Cat Specialist Core Group Meeting

Since 1994 CCF's Director, Laurie Marker, has been one of the Vice Chairs for the IUCN Cat Specialist Group. This year the format of the Group changed with the retirement of Peter Jackson, who had been Chairman for over 20 years. In July, the new co-chairs of the IUCN/SSC Cat Specialist Group (Cat SG), Urs Breitenmoser and Christine Breitenmoser-Würsten, invited Laurie along with 10 other recognized cat specialists, to attend a Core Cat Specialist Group meeting to discuss the organisation and identify the responsibilities of the Cat Specialist Group for the quadrennium 2001-04. The meeting took place in the Sparenmoos, a small resort in the Bernese Alps, in the centre of the study area of the Swiss lynx project. The aims of the conference were threefold: (1) to review the progress in cat conservation since the publication of *Wild Cats*, by Nowell & Jackson in 1996, (2) to identify the duties and involvements of the Cat SG, and (3) to discuss the organisation structure of the group.

The Core Group (CG) is the strategic board of the Cat SG. It is the team that identifies priorities, develops cat conservation concepts, and supervises the permanent tasks of the Cat SG (update status reports, red list, etc.). The CG will meet every year (preferably in April) in a different place of the world. These regular meetings will have two goals: (1) to push the group's common and lasting business, and (2) to meet with the Cat SG members of the region and to review the status and conservation needs of the regional cat populations.

In workshops, the participants reflected on the priorities in cat conservation and on the role of the Cat SG. Regarding the priorities, several topics emerged from the group work including funding for cat conservation, capacity building as a priority in conservation, the lack of basic knowledge to assess the status and population trends of most cat species, provide know-how back into the species' range, which is very often in countries with very limited economic power, and the complexities of trophy hunting.

2. International Theriological (Mammals) Congress

In August, CCF Director Laurie Marker and CCF research assistant Amy Dickman presented a paper at the 8th annual International Mammals Congress (ITC) in South Africa entitled Predator-Human Conflict Resolution – Putting Theory into Practice. The ITC is held in different countries once every four years and brings together the world's leading mammalogists. This year over 300 scientists attended from over 40 countries. The Congress provided an opportunity to meet other researchers and share information. During a two-day session on people and predators, over 20 presentations were given on problems faced internationally with predators, and research methods being used to reduce the conflict.

3. Botswana Technical Predator Workshop

In October, CCF Research Assistants Bonnie Schumann and Amy Dickman attended a workshop in Maun dealing with Botswana's predator management plan. During the workshop they presented a talk entitled Strategies for Reducing Conflicts on Namibian Farmlands. The purpose of the Workshop was to develop a research and conservation plan for Botswana's predators and was attended by many southern African and international predator researchers.

4. The Society of Conservation Biology Conference

CCF's Marker and Nghikembua represented CCF at the Society for Conservation Biology conference in September in Nairobi, Kenya. This event was aimed at creating an African Section for Conservation Biology. Issues that affect conservation Biology were discussed through presentations and group discussions. CCF presented two talks during the sessions including, The role of Science in NGO's, and Environmental Education from K1 – 12 grades.

5. World Wilderness Conference

CCF's Marker, Brewer, and Nghikembua represented CCF at the 7th World Wilderness conference in November in Port Elizabeth, South Africa. CCF participated in the working sessions of the Conference, and presented its paper entitled Cheetahs, Wild lands and Human Needs Working Together. Our presentation highlighted the need to strengthen conservation efforts outside of wilderness areas, in order to satisfy essential basic human needs. This effort will also benefit wide-ranging species and biodiversity on a broader scale. The CCF presentation also emphasized the importance of using umbrella/ surrogate species in order to direct specific and sustained conservation efforts. CCF suggested the use of endangered species such as the cheetah in order to direct conservation efforts.

6. Cheetah related work meetings

a. Felid Taxon Advisory Group (TAG) Workshop

In March, CCF's Director attended the AZA's Annual Felid Tag meeting in the United States. A slide presentation was given on CCF's activities to the US cat specialists.

b. Cheetah Master Plan Workshop

In August, the largest ever gathering of international cheetah specialists came together in South Africa to map out a Global Cheetah Conservation Action Plan. CCF staff members, Laurie Marker, Bonnie Schumann, and Amy Dickman, as well as Annie Beckhelling from Cheetah Outreach, together with Namibian Scientific Board members Dr. Arthur Bagot-Smith and Dr. Hu Berry joined several other CCF international board members at the workshop. This included Jack Grisham, Dr. Linda Munson and Dr. David Wildt from the US, Sean McKeown from the United Arab Emirates, Dr. Sarah Durrant from Tanzania, and Nick Lindsey from Great Britain.

The workshop was facilitated by Dr. Susie Ellis from the Conservation Breeding Specialist Group (CBSG), one of the Species Survival Commissions of the World Conservation Union (IUCN), and was sponsored by the North American Cheetah Species Survival Plan (SSP) and the Endangered Wildlife Trust (EWT). The goal of the workshop was to honour and unite cheetah conservation work already carried out in the wild (in-situ) and in zoological institutions (ex-situ), and to develop a conservation action plan that would link these initiatives, enhance collaboration, and provide for the long-term survival of cheetah in the wild.

The meeting, held in South Africa, was attended by 53 delegates from 10 countries including the USA, Australia, Britain, The Netherlands, Kenya, Zimbabwe, the United Arab Emirates, South Africa, Tanzania and Namibia. Other Namibian organisations included the Africat Foundation and Okatumba Wildlife Trust, MET, and veterinarian Dr. Ulf Tubbesing. This meeting was a result of formal and informal discussions among field biologists and zoo managers over the past few years, and became formalised in October 2000 at the global CBSG meeting to bring together as many stakeholders as possible in cheetah conservation (both *in-situ* and *ex-situ*) in an interactive setting to facilitate the development of a comprehensive conservation action plan for this species. Working groups dealt with issues ranging from the status and threats facing cheetahs in the wild outside of protected areas, cheetah/human conflict, genetic management, international collaboration, cooperation between captive breeding programs, education, veterinary and disease issues, and public awareness, among others. The workshop will result in a series of actions and steps, including the establishment of a global Cheetah Interest Group, for enhanced collaboration and focussed conservation efforts for the cheetah.

H. CCF Organisational Activities

1. Development and International Fundraising

a. United States

CCF continues to receive most of its funds from the United States. Major fund raising is carried out in the second half of each year. CCF's Director was in the United States for fundraisers in March and September/October. In September, although a difficult time to be travelling due to the September 11th terrorist attack, Laurie's 5+ weeks took her into six countries, including 19 cities and 15 states in the United States. Highlights included meeting with the Namibian Ambassador in Washington DC along with a key Congressman who had visited Namibia last year with CCF/USA President Vance Martin and David Barron. Additionally, the Marin County Human Society gave the Humanitarian of the Year Award to Laurie. Throughout her travels Laurie met with friends and CCF supporters, many of which shared their own cheetah stories from having visited CCF themselves.

b. Namibian Fundraising

CCF's 3rd annual "Celebration of Speed and Elegance" took place on the 28th of July at the Windhoek Country Club. Over 300 guests attended the Gala evening and enjoyed the silent auction, new age slide presentation, dinner, Cheetah Conservation Farmer of the Year Award, and entertainment by Broadway musical star, Jason Raize. Mr. Tangani Erkana, Ministry of Environments Permanent Secretary, served as Master of Ceremonies and brought the crowd to life.

The evening was entitled '2001 A Cheetah Odyssey' to reflect CCF's futuristic and long-term Research and Education Programmes. The themed environmental evening had home-made paper invitations and menus made from Kudu droppings. Lien Malan and Manda Wilson created the table decorations that included cheetah candleholders and rocks brought in from the Okorusu Mine. Local artists and businesses donated over 60 auction items including paintings, sculptures, jewellery, fashion items, and recreational 'Get-Aways' at exclusive tourist venues. Artist Susan Mitchinson donated an original oil painting and allowed it to be used as the logo for the evening.

Special guest Jason Raize ended the evening with several songs. Jason Raize is internationally known for his role as "Simba" in the Broadway musical "The Lion King". He is currently serving as a United Nations Special Ambassador for the Environment. The fun evening brought in over N\$30,000 in contributions for CCF.

c. South Africa Cheetah OutReach

Cheetah OutReach has continued to support the efforts of CCF through their educational outreach programmes and direct financial support. CCF is now reciprocating by raising funds to begin a major renovation project at Cheetah Outreach in 2002 at the Spier Wine Estate. In October, CCF's director and general manager visited Cheetah OutReach to meet with staff and provide assistance.

d. UK Fundraising

Due to the great interest in CCF's work, a UK chapter of CCF has been firmly established. A board meeting was held in June to review CCF activities for 2001. CCF t-shirts and mugs have been commissioned by Alan Lester, one of CCF's UK board members. These are currently being sold in his Oxford retail store. In addition, Peter Wells, Chairman of the Anatolian Shepherd Association of UK, presented CCF with plaque for using Anatolian Shepherds as working dogs in Namibia. His organisation has supported CCF's efforts through the media and local awareness. The Oxford Times published an article about CCF's dog programme. CCF/UK has a new 4-colour brochure which was donated by a printer in the UK through assistance from CCF supporter Cathryn Brogran. The brochure will be distributed by CCF/UK during specified activities.

2. Media and Public Relations

CCF has maintained a high profile in the media through numerous broadcasts on television and in the print media. CCF's Director was recognised by the Rotary Club of Windhoek and presented with one of Rotaries highest honours, the Paul Harris Fellowship Award and was recognized in the local paper. In March, all local Namibian newspapers ran articles about CCF highlighting the transport of the 10 cheetahs to the United States. USA today newspaper ran an article about CCF's work supported by the Cincinnati Zoo, and a UK newspaper also ran an article on Livestock Guarding Dogs. The United States television programme Good Morning America ran a national programme featuring Laurie Marker and CCF Board member Cathryn Hilker from the Cincinnati Zoo, along with their Anatolian Shepherd and cheetah cub, highlighting CCF's efforts and the announcing the donation of cheetahs to America from Namibia.

Journalists filmed CCF's Livestock Guarding Dog programme as part of a BBC-TV special on working dogs. Over the course of this past year a Discovery Channel documentary has been filmed at CCF by Panthera Productions. It included footage of Anatolian puppies being born, their growth and development, placement at farms, and all other aspects of CCF's programmes. A film crew from South Africa worked with the Otjiwarongo Tourism Association for a regional tourism video, which featured CCF (this was aired in 2001 and will be aired more in 2002). A US film crew from the popular news show 20/20 filmed a piece at CCF. This programme is due to air sometime in 2002.

In November a German film crew spent one week with CCF to film a documentary that will be shown on stations internationally as well as for the World Summit, which will be held in South Africa in 2002. Another German film crew was here and filmed footage to add to a documentary they had previously filmed at CCF in order to make it into a children's programme. A United States children's programme called "In the Wild with Jason Raize" was filmed at CCF and aired at the end of the year. Another United States children's TV programme was filmed at CCF and was aired during the year.

In the middle part of the year, a Cincinnati TV-5 crew filmed a documentary about Namibia, highlighting CCF and Cincinnati's involvement with our programmes. Jonathan Scott, famous wildlife photographer, and his wife Angela visited CCF twice during the year. They took photographs and information for an eventual publication featuring CCF's work.

3. Visitors to CCF

During the past year, CCF had several of its major donors visit. These included the Board of Directors of the South African Green Trust, who have committed to another three years of funding of CCF's programmes. CCF also hosted groups from Conservation International, the African Wildlife Foundation, the Cincinnati Zoo, Directors from the Mawell Zoo and Paignton Zoo in the UK, a group of Zoo Directors and Zoo Veterinarians from Sweden, and a FAM trip of American Zoo Directors brought by Park East Tour Company.

During the past year many of CCF's board of directors and science advisors visited CCF. These include CCF USA board members Annie Graham and her family, Carl Hilker and his son, Bill and Pat Miller, Vance Martin, and UK board member Peter Stewart, and science advisors Jack Grisham, Sean McKeon, Drs. Steve O'Brien, David Wildt, Linda Munson, David McDonald Gus Mills, and other long-time research collaborators Drs. Susie Ellis and Melody Roelke, and past CCF master student Heiko Thies. In addition, as three key members of the Zimbabwe Cheetah Management Group spent several days in training at CCF.

4. Volunteer Programme

Volunteers are the backbone of CCF's programmes. CCF continues to work with EarthWatch volunteers, with 62 EarthWatch volunteers helping at CCF in 2001. This year we have increased Earthwatch volunteer participation to four volunteers for a two-week period every month instead of every other month, with an additional group of 14 EarthWatch volunteers in August to assist with the 24-hour waterhole count. Two groups from the British youth development organisation, Raleigh International, each spent three weeks at CCF. The groups, composed of 12 volunteers each, undertook the layout and building of new cheetah quarantine holding pens. CCF continues to work with student volunteers from the University of Oregon Global Graduates programme (two students in 2001), Round River Conservation Studies from Utah (two programmes including 13 students total), the University of Namibia (3 students total), and Polytechnic of Namibia (3 students total). In addition, at least 10 other CCF volunteers assisted during the year.

5. CCF Staffing

CCF's permanent staff includes:

Laurie Marker – Executive Director
Dr. Bruce Brewer – General Manager
Dr. Richard Jeo - Senior Ecologist
Siegfriedt Aebeb - Community and Youth Relations Officer
Edgar Dedig - Farms Manager
Heike Dedig - Administrative Assistant
Amy Dickman - Senior Research Assistant
Fanuel Ekondo - Research Assistant
Dennis Muesee - Visitor Centre Assistant
Matti Nghikembua – Research Assistant & Education Officer
Gephardt Nikanor - Education Assistant
Bonnie Schumann – Senior Research Assistant
Mandy Schumann - Research Assistant
Graeme Wilson – Education Curator
Mary Wykstra-Ross -Senior Research Assistant - Kenya

CCF also supports fifteen Namibian farm and domestic workers.

IV. PLANNED ACTIVITIES: January –December 2002

During the next year CCF will:

- Continue work with farmers in cheetah related issues and reducing conflict.
- Continue with a tag-and-release programme and biological sampling of cheetahs.
