## **Acknowledgements**

The Studbook Keeper wishes to thank all the people and organisations who have assisted with the studbook compilation.

The Studbook Keeper wishes to thank, in particular Kate Echement for entering and compiling the data presented in this studbook and for processing the studbook reports. In addition, the Studbook Keeper wishes to thank Lars Versteegen, Patricia Tricorache and Laurie Bingaman-Lackey for their on-going assistance in data clean-up and connecting previously unknown ISIS links with the Cheetah Studbook data.

The Studbook Keeper also wishes to thank the donors of the Cheetah Conservation Fund (CCF) UK, Namibia, and USA for their financial support that covers the majority of the costs involved in compiling, publishing, and mailings. The cover design is by Dr. Judilee Marrow from the Smithsonian Institution's National Zoological Park, to whom we also give thanks.

## Introduction

The 2009 International Cheetah Studbook is the fifteenth edition of the world registry for captive cheetah. This edition of the International Cheetah Studbook combines all information available for the period 1 January 2009 to 31 December 2009.

The captive cheetah population on 31 December 2009 was 1515 (788.721.6) animals in 251 facilities in 42 countries. The captive cheetah population lives in eight geographical regions. Figure 1 shows the percentage of cheetah living in these regions as of the end of 2009. Table 1 is a breakdown of the eight regions by country and includes the number of facilities and the number of cheetah in each country for 2009. In addition, 7 (6.1.0) cheetahs were sold to private individuals (primarily sales to game dealers where the final destination was not submitted to the studbook keeper).

This edition of the Studbook includes the major changes in the captive population from 1 January 2009 through 31 December 2009 (Section B). Section C is a summary of the captive cheetah population, by studbook number, at individual facilities as of 31 December 2009. In Section C, the 2008 numbers have been changed from last years report due to reports received after the 2008 publication date.

Also included in this edition are all additions (Section D), 2009 births (Section E), 2009 deaths (Section F) and 2009 transfers (Section G). Under Section F is an additional subsection titled “Lost to follow-up (LTF)” 2009. These 125 animals have no current information. Section H is a Studbook listing of all live animals as of 31 December 2009.

From 1 January 2009 to 31 December 2009, 348 (176.161.11) new animals were registered (see Section D), representing newly imported wild-caught animals, and births during this period. Of these, eleven captive born animals were of unknown sex. Of the new additions, 60 (34.26) animals were wild caught. Of these animals, 42 (21.21) went to five facilities in Namibia, 10 (9.1) cheetahs were caught in South Africa and went to one captive facility, and 8 (4.4) were caught in Northern Africa/Middle East and went to two captive facilities in United Arab Emirates. In addition, historical information on 163 (75.81.7) animals were added to the database.

## 2009 Studbook Information

The captive cheetah population on 31 December 2009 was 1515 (788.721.6) animals in 251 facilities in 42 countries. Of the 1515 animals, 77.5% or 1174 (612.556.6) are captive-born and 21.5% or 325 (166.159) are wild born (see figure 2). Sixteen animals were of unknown origin. This figure shows a increase by 10 animals in the number of captive-born animals in the population compared to 2008. The number of wild-born animals decreased by 4 animals compared to the population of wild-born animals in 2008.

**Figure 2. Age/Sex Structure of the 2009 Captive Cheetah Population for Wild-Born (WB) and Captive Born (CB)**

Successful parentage was reported in 2009 with animals as young as one year old and as old as twelve years. The majority of successful breeding for both sexes occurs between three and ten years of age. The data are relevant in assessing the age structure of the 2009 population. As shown in Figure 2, 46% or 696 (354.342) animals of the 2009 population are within the prime breeding age bracket (>3-<10 years of age). Of the animals in this age bracket 18% or 126 (61.65) are wild born. The percentage of sub-adult animals (0-<3 years of age) is 33% or 504 (263.235) animals, of which 12% or 62 (33.29) animals are wild-born. Twenty-one percent or 315 (171.144) animals are older than the usual breeding age (>10) of which 43.5% or 137 (72.65) are wild-born.

During 2009, 160 (81.68.11) cubs were born in 48 litters in 23 facilities in 13 countries (see Section E). Table 2 lists these litters of cubs and facilities. These births represent an increase in productivity from 2008 when 121 cubs were born. Of the 160 cubs born, 23 (8.8.7) died under 1 month of age, which represents a 14% infant mortality. Twelve (6.6.0) cubs died between one month and six months of age. Total cub deaths less than six months of age were 35 (14.14.7), which represent a 22 % cub mortality, which is an increase from the total 2008 cub mortality, which was 20% (24 cubs).

+ First time breeding success

On a facility basis, of the 249 facilities that held cheetah in 2009, 23 had reproductive success. As shown in Table 2, of those facilities, 22 had previous reproductive success, and one of the facilities had success for the first time in 2009. There were 84 (41.43) cheetahs that were reproductively active during the year. {Note that actual individuals as per studbook number (i.e. excluding unk and multiple breedings) is 77 (37.40)}. The age distribution of successful breeders in 2009 is presented in Figure 3, and the age distribution of all breeding animals alive at the end of 2009 is presented in Figure 4. This data is relevant in assessing the age structure of the 2009 population presented in Figure 2. At the end of 2009 there were 255 (117.138) proven breeders alive in the captive population. During 2009, only 77 (37.40) animals, 5.1% of the captive population successfully bred and 17% {13 (9.4)} of these were wild-caught animals.

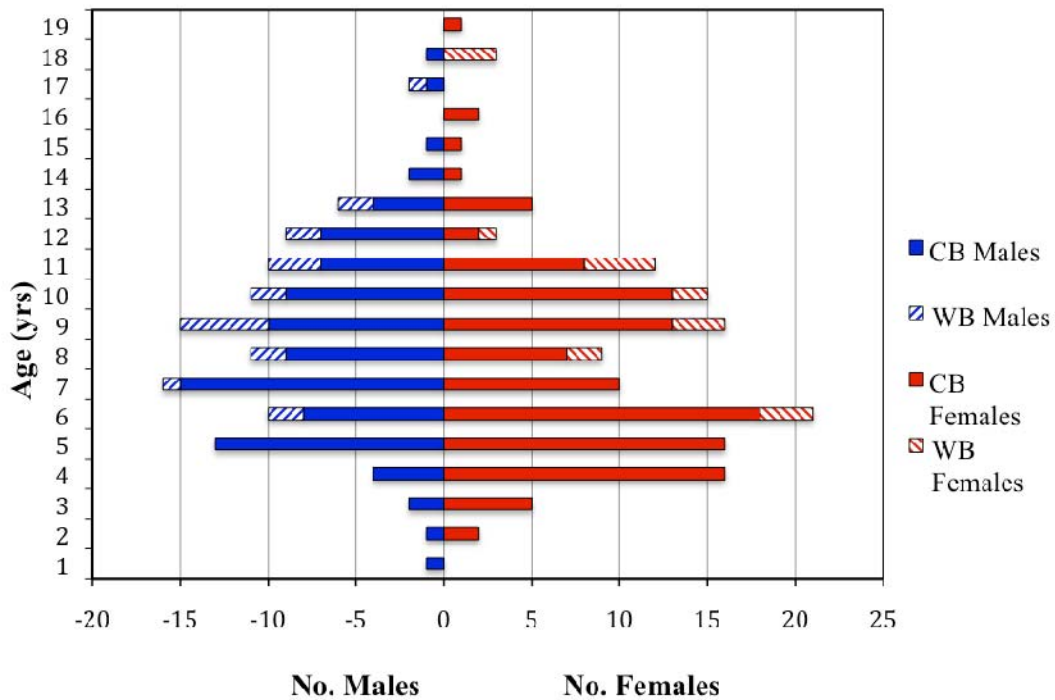

**Figure 3. Age Distribution of Animals that Successfully Reproduced in 2009**

Of the 1515 cheetahs alive in the 2009 population, 253(115.138) animals are proven breeders or animals that have bred at least once. This number permits the computation of the effective breeding size ( $N_e$ ) for the 2009 population using the formula:

$$N_e = \frac{4 \times 115M \times 138F}{788M + 721F + 6unk} = 41.9 \%$$

Where M is the number of breeding males and F is the number of breeding females. This value ( $N_e$ ) is equivalent to 41.9 % of the captive population.

**Figure 4. Age Distribution of Proven Breeders Alive as of 31 December 2009**

Deaths reported in 2009 totalled 119, including cub death (see section F). Figure 5 shows the age at death of captive-born and wild-caught cheetah by sex in 2009. Of the animals that died, 37% or 44 animals were within the prime breeding age group ( $\geq 3 \leq 10$  years of age); 33% or 39 animals were under 3 years of age, of which 25% or 29 were under 1 year old; and 30% or 36 were over 10 years of age.

**Figure 5. Age at Death of Captive-Born (CB) and Wild-Born (WB) Cheetah, 2009**

During 2009, 96 known facilities transferred animals either into or out of their facilities. Fifty-five facilities transferred 180 (93.86.1) cheetahs to 70 facilities (see Section G). There were 7 (3.4.0) cheetahs released in 2009, 2 (1.1) in Zimbabwe, 2 (0.2) in Namibia, and 3 (2.1) in South Africa. There are thirteen new facilities holding cheetah, and five facilities that are no longer holding captive cheetahs. Since the end of 2008, there has been an increase of 2 animals in the world's cheetah population.

## Conclusion

The relative success of the world's captive cheetah population over the past few years indicates that an increased reproductive success throughout the world's cheetah facilities can be achieved through a cooperative management programme. This will become even more important to work towards as the availability of importing wild cheetahs into captive facilities declines.

There will always be some wild-caught cheetahs that cannot be released back into the wild. It is the responsibility of the world's zoos to cooperate in maximizing the breeding success of these important wild founders, as set out in the goals of the World Zoo Strategy. The main goal of the world's zoos is to manage the captive cheetah population without the need for wild-caught animals.

Overall, the global captive population has not been self-sustaining. However, the number of breeding animals and the effective population size of the captive cheetah population worldwide has increased to an all time high of 41.9% for 2009 (see Table 3). Although the effective breeding population increased in the last year, there continues to be large differences among different regions and within the same regions in reproductive success (see Table 2). This large difference within a region may be an important indicator as to how cheetahs could be managed such that a population could become self-sustaining. Therefore, the development and collaboration of successful regional breeding programmes is critical in order to contribute to the sustainability of the captive population worldwide.

**Table 3. The number of breeding animals and effective breeding size of the World's captive cheetah population (2002 – 2009) and increase of population annually.**

It is hoped that you, the captive managers of cheetah, will continue to assist with the accurate record keeping for collectively managing this species in captivity. As the Studbook Keeper, the data presented to you in the International Studbook is only as accurate as that which is reported. A questionnaire is sent to all facilities that have cheetahs twice a year, however, not all facilities report back annually (see Section C). Therefore, most of the current information has been compiled through the use of the ISIS database. Please check these records and report any discrepancies.

In the long-term, the development of a Global Master Plan is a critical component for the long-term future of the species. As the free-ranging population of cheetah continues to decline and a large amount of genetic diversity of the remaining populations is lost, the captive and wild populations should be managed in cooperation.

## **The Studbook**

The International Cheetah Studbook has the purpose of registering all cheetah in the world held in both zoological and private facilities and providing information about existing animals by publishing the studbook contents thus creating the preconditions for selecting breeding animals.

The 2009 studbook data includes all cheetahs known to be alive as of 31 December 2009. The International Studbook has added captive animals around the world. It includes wild-caught and captive-born animals, which were alive in 1980 and after, as well as founders with live offspring from 1980. Each registered animal has a studbook card.

The data on the following pages has been computerized using the International Species Inventory System's (ISIS) Sparks Studbook Program. The Information was compiled from various sources: Bi-annual questionnaires sent to all facilities holding cheetah; International Species Inventory System (ISIS); and importantly, personal communications. Excellent cooperation has been obtained from many facilities, and it is hoped that the data is accurate and complete. The Cheetah Studbook Keeper makes entries based on reported evidence and must assume that all information received from breeders is correct. Owners and holders of cheetahs are urged to check the studbook for accuracy and if there are any discrepancies, the studbook keeper would appreciate notification.

## Registration Procedures

The following are procedures used by the studbook keeper for registering new animals into the studbook and guidelines for the holding institution, owners, breeders, and animal dealers. These guidelines are necessary conditions to achieve the best possible procedures for reporting new acquisitions, additions to inventories (birth and imports), and deletions (transfers out of inventories and deaths).

### Registration

To register an animal, the studbook keeper is supplied with information about the sex, name, date and place of birth, and all previous owners and dates of transfer of ownership. If the parents are known, please include name studbook number, date of birth and origins of both dam, and sire. Also, if animal has produced any offspring, please give sex, date of birth, mate, and description for all cubs born.

Once all this information has been gathered, the studbook keeper will issue it a consecutively assigned “studbook number” in the International Cheetah Studbook.

- Cheetahs caught in the wild will be assigned a studbook number by the studbook keeper.
- Cheetahs born in captivity will be assigned, by the studbook keeper, a breeder number in addition to their studbook number.
- The breeder number includes a set of initials that correspond to an abbreviation of the facility name followed by a number. The breeder numbers are assigned by the studbook keeper according to the sequence of births in that breeding facility. All cheetahs born at the facilities are continuously registered, including stillborn and deceased. Numbering in a litter starts with the males and ends with ones of unknown sex.
- The studbook and house name are the same unless otherwise recorded by the breeder.
- The studbook card will be sent to the animal owner to accompany the animal until its death. One copy of the studbook card remains with the studbook keeper.
- The studbook card is the same colour for all sexes.

### Additions To Inventory

- The studbook keeper must be kept informed of all additions, births, or transfers in (requested within one month).
- For animals caught in the wild, documents must be sent to the studbook keeper indicating date and place of capture, supplier, and dates of arrival, including an estimated date of birth and the parents.
- For animals born in your facility, report to the studbook keeper the complete litter including stillborn and deceased young; indicate the date of birth and the parents.
- Offspring and changes of ownership will be entered onto the studbook card by the owner.

### **Deletions From Inventory**

- The studbook keeper must be kept informed of any deletions – transfers out of facilities and deaths (requested within one month).
- If registered cheetahs are sold or transferred, the studbook card must be sent to the new owner and change of ownership be reported to the studbook keeper (including full address details). Be extremely careful when transferring cheetahs through animal dealers and send studbook cards directly to the new owners.
- The studbook card should be returned to the studbook keeper after the animal's death with the appropriate information, date, place, and cause of death, necropsy report, and disposition of carcass.
- The end of the studbook year is 31 December every year. A bi-annual report of all changes in animals during the year must be sent to the studbook keeper by 31 July (for the period of 1 January – 30 June) and 31 January (for the period from 1 July- 31 December). Bi-annual questionnaires will be sent to all the facilities for completion and returned to the studbook keeper.

## **Studbook Format**

Order of listing: All cheetahs are listed in order of their studbook number.

Dates: Dating system used for birth date, transfers and death date is day, month, and year.

Studbook Number: Starting with number 1, these numbers were assigned sequentially in chronological order in the North American Regional Cheetah Studbook. Since some changes in dates occurred since the first Volume in 1983, the changes were left where they are already numbered. Within each year, studbook numbers were assigned as the studbook keeper was notified of births or acquisitions and, therefore, are not necessarily listed in chronological order.

Starting with studbook number 611, the International Cheetah Studbook is in chronological order with new international additions. As changes have been made, the changes where they were already numbered. (It is strongly recommended to tattoo all animals in the inner thigh with their studbook number. Please notify the studbook keeper as animals are tattooed).

Sex: M for male; F for female; U for Unknown

Name: The names of the animal are left up to the breeders and owners.

Breeder Number: The breeder number includes a set of initials that correspond to an abbreviation of the facility where the animal was born, followed by a number which is the individual's number in sequence of births in that breeding facility. The breeder number is assigned by the Studbook Keeper. (See Breeder Facility abbreviations at the end of this section).

Date of Birth: Each animal's birth date; "Y" after birth date indicates estimated birth date.

Sire and Dam: The studbook numbers of the parents are listed if the parents are known, otherwise listed as "WILD" if the animal was wild-born, or "UKN" if unknown, or "MULT" if there is unknown possible multiple selections. When known, the multiple selections are listed in section K.

House Number: The number used by holding facility to register the animal with ISIS ( The International Species Inventory System, c/o Minnesota Zoological Gardens, 12101 Johnny Cake Ridge Road, Apply Valley, MN 55124, USA), or the individual number used by individual facility.

Location: The Institution holding the individual as of the date specified and not necessarily the owner. In most cases, institutions are listed by the city where the institution is located, followed by country. An institutional list is available in section D.

Since: Arrival date to the facility holding the individual animal or death date.

Status: Indicates Capture, Birth, Transfer, and Death and relates this transaction of the individual animal to the date in the "since" column.

Tattoo: Indicates the individual's tattoo number or the microchip number. It is strongly recommended to tattoo all animals in the inner thigh with their studbook number. Please notify the studbook keeper, as animals are tattooed.

Inbreed: This number represent the inbreeding co-efficient for each animal.

Comments: Includes cause(s) of death reported through necropsies or causes listed on returned studbook cards; "Living Status Unknown" for living or death status which is not known or confirmed; "Assumed Dead" for animals that are believed not to be living and confirmation is not available; "Same As" identifies animals that have been registered twice. Other comments are encouraged and will be included.
