

CHEETAH CONSERVATION FUND –

Job Title: Veterinarian

Posted: 11 April 2023 Closing: 26 April 2023

Reports to: Executive Director, General Manager, and the Assistant Director for Animal Health and Research.

Job Overview: The successful candidate should have a degree in Veterinary Medicine, be qualified to work in Namibia (see detail below), be interested in livestock, dogs, horses and wildlife as well as research, and have good team working skills; Namibian resident preferred.

The animal collection includes cheetahs, livestock guarding and scat detection dogs, dairy and meat goats, sheep, cattle, and horses. The CCF veterinary clinic is equipped with a surgery room, several microscopes, an isoflurane gas anesthesia machine, a Cardell veterinary anesthesia monitor, an endoscope, an ultrasound, digital radiography equipment, in-house blood chemistry analyzers, and a DanInject dart gun for immobilizations. Dentistry work is performed by the local human dentist. The veterinarian will not only conduct clinical work but will also be part of the CCF research and outreach community.

The Cheetah Conservation Fund (CCF) veterinarian supervises the veterinary technician and works with the cheetah keepers and Farms Manager and his staff. The opening requires a minimum one year commitment.

Responsibilities and Duties:

- CLINIC

- o managing the clinic including inventory maintenance and hygiene
- o maintaining the clinic databases and electronic records
- o planning bi-weekly health care meetings
- o supervising the veterinary technician/nurse
- o working in conjunction with the animal care staff to ensure appropriate communication
- o interacting with visitors and guests

- DOMESTIC ANIMALS

- o preventative and routine health care for the goat and sheep herd, horses
- o livestock guarding and scat detection dogs including vaccination and parasite control protocols and treatment of medical and surgical cases
- o working together with the Farms Manager and supervising management of nutrition and reproduction for the goats, sheep and dogs
- o spaying and neutering the puppies of the livestock guarding dog program

- CHEETAHS

- o preventative and routine health care of the captive cheetahs, including vaccination and parasite control protocols and treatment of medical and surgical cases

- RESEARCH

- o Participating in ongoing research as well as supervising incoming veterinary student interns for their research projects.
- o Ongoing projects consist of:
 - stress and gastritis studies

- hookworm survey in the working dogs;
- ongoing parasitological assessment of wild cheetah scat samples;
- parasitological survey of the captive cheetahs combined with the evaluation of efficiency of chosen deworming plans;
- parasitological survey of wildlife at waterholes at different seasons/in different areas
- necropsy assessment of donkeys and horses, designated to feeding
- Laboratory research is a bonus
- And, other aspects of animal health research

- COMMUNITY CONSERVATION

o Participating in CCF's ongoing One Health programme in communal areas around the Greater Waterberg Landscape, including livestock health checks, teaching livestock management to rural communities, rabies vaccination campaign, and spay and neutering of rural community dogs

Qualifications:

- Degree in veterinary medicine
- Qualified to practice in Namibia. (To be able to register in Namibia veterinarians need to have passed the Namibian board examination or be licensed to practice in South Africa via examination.

If you meet the qualifications and wish to apply, forward a .pdf of your CV and a letter explaining your interest to jobs@ccfnamibia.org . Email applications only: phone or mail applications will be ignored.
