CCF Vision

To see a world in which cheetahs live and flourish in co-existence with people and the environment.

CCF Mission

To be the internationally recognized center of excellence in the conservation of cheetahs and their ecosystems. CCF will work with all stakeholders to develop best practices in research, education and land use to benefit all species, including people.

CCF Contributors

Dear Friends,

First, let me say, thank you! Your continued support for the programs that are helping to save cheetahs continues to inspire me. It is very humbling to see the many ways people of all ages are participating to ensure the Cheetah Conservation Fund's work continues. Because of you this year was a success! The year started with CCF cohosting Pathways Africa Conference and Training in Namibia where conservationist from around the globe convened to examine the human dimensions in wildlife management. Throughout the year CCF reached almost 5,000 school children, trained 100+ farmers, processed 367 tons of thornbush into Bushblok, rewilded 5 cheetahs and so much more.

Although, 2018 did not come without challenges. CCF had to mobilize a small team, including myself, to travel to Somaliland to provide critical care for several cheetahs that were confiscated from the Illegal Wildlife Trade (IWT). CCF also responded to a call by the Namibian Ministry of Environmental and Tourism to rescue several endangered and orphaned African painted dogs in Namibia. Thank you to those who provided the emergency funding needed to handle both situations.

Looking forward to 2019, there is so much more to accomplish. We hope you will continue to support the research, education and conservation programs that make a difference for the survival of cheetahs.

With sincere gratitude,

Laurie Marker

Cheetahs' Race for Survival

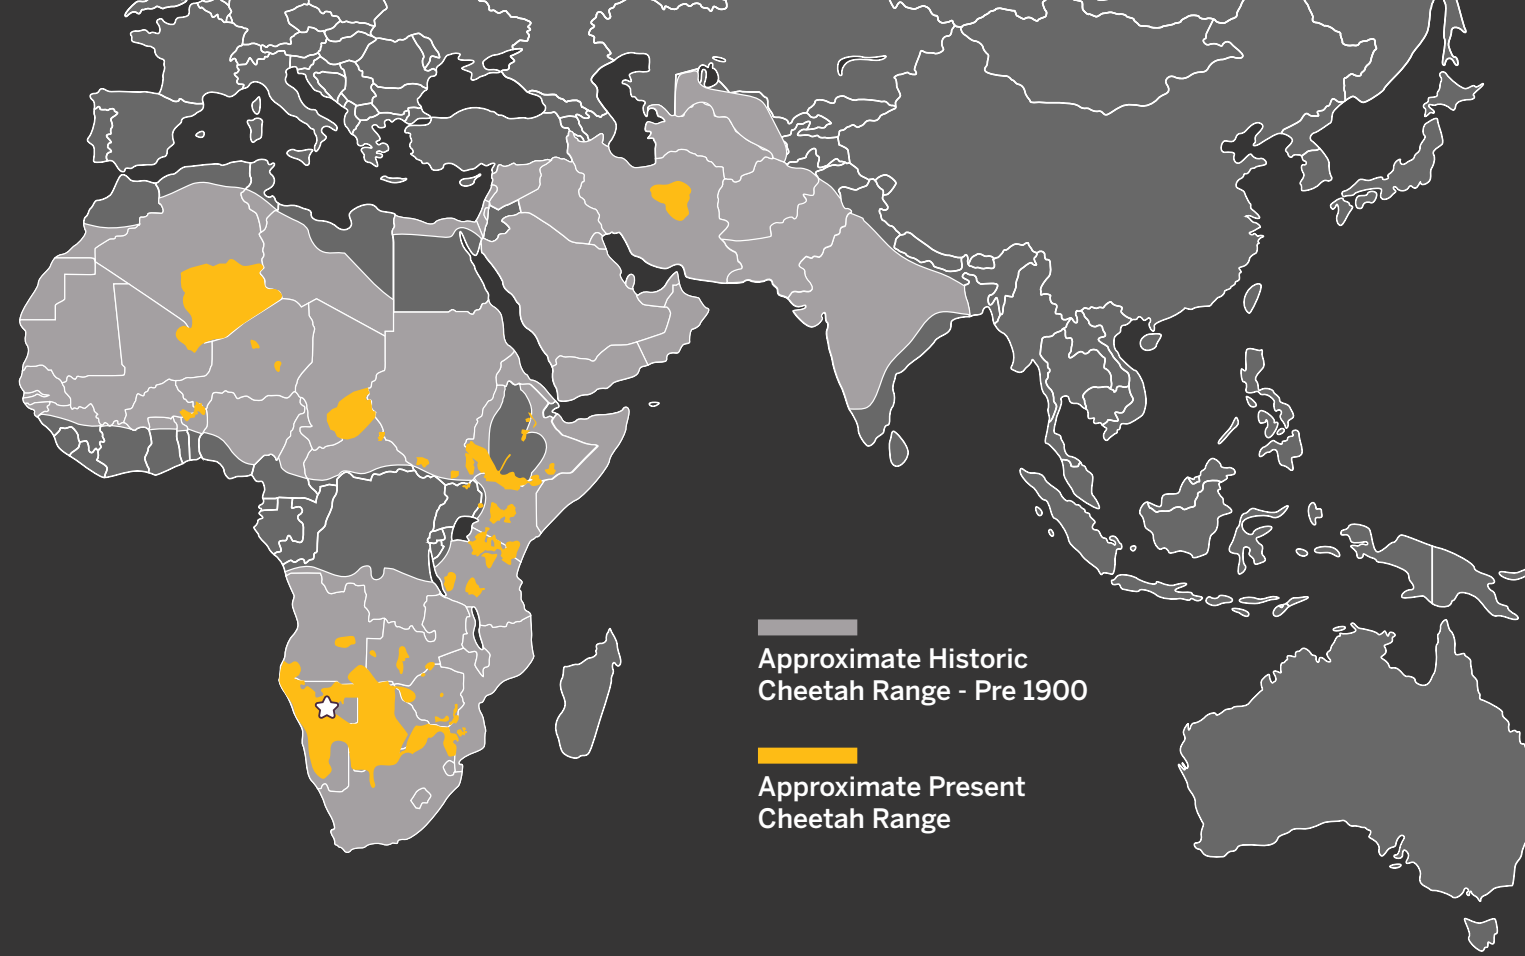

Your support made it possible for CCF to continue the research, education and conservation programs that help cheetahs in their race for survival. CCF accomplished multiple activities that are protecting cheetahs and their habitats:

- Increased partnerships through local and international programs, to build capacity for conservation
- Mitigated human-wildlife conflict by providing training programs and livestock guarding dogs
- Managed land to prevent further habitat loss, fragmentation and degradation
- Generated greater public awareness about the illegal trade in cheetahs

CCF's holistic approach to conservation has proven that these actions make a difference and serve as models for many conservationists working to protect endangered species.

Environmental Stewardship and Capacity Building

CCF is a regular host and participant in conservation capacity building programs to create new partnerships that improve environmental stewardship. Here are some of the CCF highlights from 2018:

CCF cohosted the Pathways Africa Conference and Training in Namibia where more than 200 international conservationists representing 28 countries were in attendance. This included 40 mid-level career conservationists representing 12 African countries. Pathways Africa was developed to set the precedent for future research, innovation and collaboration and to further the application of research in the field of human dimensions of wildlife management in sub-Saharan Africa and beyond. During the conference and training new relationships were built across the cheetah's range and participants returned home **equipped with new techniques and strategies to mitigate human-wildlife conflict.**

The 36th Annual Environmental Education Association of Southern Africa (EEASA) Conference in Zambia hosted 200+ participants from 10 different countries. CCF Research and Education Manager, Annetjie Siyaya presented strategies on **Mitigating Human-wildlife Conflict** and shared CCF training

materials including **the Teacher's Resource Guide, "A Predator's Role in the Ecosystem"** and **Rabies Prevention Awareness** information.

CCF hosted Dr. Terry Gipson of **Langston University**, a top **research institute for goat production** in the U.S. Dr. Gipson and also CCF's Small Livestock Manager, Toivo Tyapa, provided dairy goat production training to area farmers and participated in an information exchange for goat management. Toivo then traveled to the U.S. to train with Dr. Gipson at Langston University, in Oklahoma, on artificial insemination and participated at the National Goat Conference in Alabama.

CCF attended the **6th Annual Science Conference at the University of Namibia**. CCF hosted the first Biomass Technology Day for more than 400 people in partnership with the Namibian Biomass Industry group (NBIG).

These programs present opportunities for CCF teams to learn the needs of the community and build capacity to achieve improved livelihoods so Namibians can become better stewards of the landscape and wildlife.

CCF Model-Farm Education and Research Centre

One of the most effective teaching strategies is leading by example. This method has proven the best approach to saving cheetahs in the wild. The CCF Model Farm-Education and Research Centre embodies this method. CCF teams:

- Breed, train and place **Livestock Guarding Dogs** (LGD) that farmers employ to protect herds from predators
- Develop and demonstrate livestock and farmland management techniques taught in our **Future Farmers of Africa** (FFA) workshops
- Interact with students and educators during **Future Conservationists of Africa** (FCA) wildlife education programs designed to develop a better understanding of how people and wildlife can coexist
- Train women and men on how to make cheetah-friendly products like goat cheese, ice cream, fudge, and honey at the **CCF Dancing Goat Creamery**
- Provide instruction in green energy technologies at CCF's **Biomass Technology Demonstration Centre** (BTDC)

Innovation

Ecology and Genetics

Data generated through the research programs is the foundation for creating and informing CCF's conservation strategies. A sample of current projects include:

- Camera traps are used to better understand biodiversity in Namibia's eastern communal lands.
- Detection dogs used to collect scat samples to identify presence of cheetahs and other wild species.
- DNA samples from blood and scat are used to identify relatedness and population structure and using microsatellite sequencing analysis to help identify the genetic diversity in existing cheetah populations.
- Samples are collected from animals confiscated from wildlife traffickers to help determine the animal's origin.

Work done in CCF laboratories is often done in collaboration with other organizations and international researchers. Your support provides equipment and materials to our scientists that lead to new discoveries and accomplish this very important work.

Mitigating Human-Wildlife Conflict

One of the greatest causes for diminishing cheetah populations is human-wildlife conflict. In Namibia, more than 90 percent of cheetahs live outside protected areas on rural livestock farmlands. CCF's programs and strategies have proven to reduce human-wildlife conflict.

CCF's **Future Farmers of Africa (FFA)** and **Future Conservationists of Africa (FCA)** programs are used to educate people about the importance of predators in our ecosystem and the value of living together in harmony. As part of the highly successful Livestock Guarding Dog (LGD) Program, CCF breeds, trains and provides livestock guarding dogs to area farmers to protect their herds. Mitigation

Confronting Illegal Wildlife Trade

In September, Dr. Marker dealt with eight cheetahs confiscated from **Illegal Wildlife Trade (IWT)**. Dr. Marker traveled to the CCF 'safe house' in Somaliland to assist and arranged for the care of the eight confiscated cheetahs, two were just three-week-old cubs. Sadly only one of the two younger cubs survived. **Thank you to our generous donors and volunteers that secured emergency funding and supplies during this crisis.**

IWT is a significant contributor to the cheetah's population decline and endangerment. Cheetah cubs caught in the wild are often trafficked and smuggled out of Africa for the **illegal pet trade**. IWT is the fourth largest transnational crime in the world following narcotics, counterfeiting and human trafficking, which are estimated to be worth billions per year. Christine Dawson, director of the Office of Conservation and Water at the U.S. Department of State said, **"The same criminals that are trafficking in drugs, guns and people, traffic in wildlife."**

CCF is ramping up their efforts to help protect wildlife in the fight against IWT. CCF continues to aid in the enforcement of the **Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES)** and support national laws.

CCF's IWT Specialist, Patricia Tricorache, participated in the October CITES SC70 – 70th meeting of the Standing Committee in Sochi Russia. CCF UK Chair, Jane Galton attended the Illegal Wildlife Trade Conference in London where they pledged their commitment to continue fighting against the illegal trade of cheetahs.

Officials who attended training at CCF were responsible for the arrest of two cheetah smugglers. The smugglers were given 3 years in jail and fined US \$300 each.

Protection

One Health Initiative

CCF is working to develop an integrated One Health Initiative to address the needs of the communities they serve. The health of humans, livestock and wildlife are all important components of CCF's conservation efforts. With the financial support of the **Foundation for Human Rabies Education and Eradication (FHREE)**, CCF implemented a **Rabies Awareness and Prevention campaign**.

The World Health Organization reports that about 60,000 people die each year from rabies with 95% of the cases occurring in Africa and Asia. CCF is working to develop and fund new livestock and human health programs along with veterinary services that will insure the well-being of humans and animals. The first branch of CCF's One Health initiative is the development of a mobile rabies vaccine clinic. The mobile clinic will serve isolated communities to reduce the risk of rabies in the domestic species, collectively protecting livestock, wildlife and people from this deadly virus.

Integration

Land Management

In Namibia, 80 percent of wildlife live outside protected areas on livestock farmland. This makes appropriate land management critical to overcome the fragmentation of cheetah populations and degradation of the land where cheetahs and other vulnerable species range. CCF's stewardship and conservation efforts to renew and restore degraded, damaged ecosystems and wildlife habitats in the environment is fundamental to our work.

CCF is working in the Greater Waterberg Landscape to establish partnerships to manage and conserve land to reduce management costs and provide better protection for the 63 mammalian species that have been recorded in the area. The purchase of critical land parcels, when available, will allow CCF to continue to connect wider ranges, protect vulnerable species and work on habitat restoration.

Stewardship

Ecotourism Creates Economic Development

Namibia's concerted effort to conserve its natural resources has helped ecotourism to grow. CCF continues to contribute by creating jobs and introducing tourists to the plight of the cheetah.

Every visitor to the CCF Field Research & Education Centre is exposed to the work that CCF conducts on a daily basis. This includes tours, lodging and dining experiences. The Centre is open to the public 364 days each year (closed only December 25). Visitors are always welcome.

Impact

A Conservationist at Heart

No matter who you are or where you live you can be an advocate for cheetahs in the wild. In 2018, we met a lot of people who are doing just that. Here are just a few examples. You can learn more about other CCF conservationist by visiting our website.

Check out their stories and many more on the **cheetah.org website and see how you too can get involved.**

Starting Top Left Clockwise

12 y.o twins, Willow and Isabella set up their own non-profit and raise funds for CCF

Sara, a 12 y.o. girl from Denmark who took the initiative for a charity auction to raise funds for CCF

How Zoos Support Global Conservation

CCF partners with many accredited zoos to raise awareness for conservation and funds for CCF research and education programs. Zoos function as Embassies for wildlife. The animals at a zoo are ambassadors, each serving as representatives for their species in the wild. Zoos provide the opportunity for people to connect with these species, learn about their natural history, home ranges, and begin to care about protecting them and their natural habitats. Zoo's organize volunteers and invite visitors to participate in International Cheetah Day (ICD) programs.

When the Ministry of Environment and Tourism (MET) asked CCF to take in several orphaned African painted dog pups, Columbus and Dallas Zoos responded to the call and provided emergency funding to build new enclosures. Thanks to their help these dogs are doing well, and CCF has plans for rewilding in 2019.

December 4th is ICD!
For more information please visit the ICD website at InternationalCheetahDay.org

Global Conservation and Education Tour Highlights

2018 accomplishments were made possible through the participation and generous philanthropy of our CCF donors. We appreciate all the patrons who hosted fundraisers, attended events, and invited friends, family and colleagues to learn more about conservation and the plight of the cheetah.

Dr. Marker traveled to 24 states and visited 52 cities. She gave over 60 presentations to create greater public awareness about cheetah conservation in 2018. Serving as a keynote speaker, honoree and educator Dr. Marker shared information about the threats to cheetahs and the programs CCF has developed to protect cheetahs in the wild. Additionally, Dr. Marker and her team served as educators and speakers to reach many more audience participants around the globe in the U.S., Canada, Germany, Ethiopia, Russia, and United Kingdom sharing information about the threats to cheetahs and CCF efforts to protect them.

Volunteers and Visitors are Vital

CCF is grateful to the many volunteers who donate their time and expertise in support of our work around the globe. Volunteers manage boards, organize fundraisers, create graphics, assist in offices, take photos, work at the CCF Centre and share social media to highlight events like International Cheetah Day (ICD).

International Cheetah Day is celebrated annually on Dec 4 around the globe in many ways by volunteers, zoos and other organizations. Cheetah lovers organize runs, events, educational programs and fundraisers. This year, Dr. Marker spent ICD in London participating in a House of Commons Parliament panel discussion regarding the Somaliland environment and wildlife trafficking.

CCF needs you! Did you know you can volunteer as a working guest or intern in Namibia? You can also volunteer in your own backyard. Information about visitor, internships, working guests and local volunteers is located at cheetah.org.

Richard Wiese brought his cameras to Africa for his Born to Explore PBS Television Special, Namibia: Land of the Cheetah.

You Can Make A Difference

CCF research, education and conservation programs are funded by grants, individual gifts, fundraising events and programs. Helping save cheetahs in the wild is made possible by you. Both small donations and large gifts add up to make a huge difference for cheetah survival.

By contributing to CCF and sharing how you support conservation is making a difference by increasing the number of people who care. Become a member of the CCF team and make a difference by participating: join the CCF monthly giving program, becoming a challenger, program sponsor or orphaned cheetah supporter.

For more information about program sponsorship opportunities please call the CCF office at 866-909-3399.

ANNUAL DONOR LEVELS

\$25,000 and up
FOUNDER'S CIRCLE

\$5,000 to \$24,999 Annually
CHALLENGER

Donors of \$5,000-\$9,999 will be named in a campaign of their choosing (Year-End or Chewbaaka's Wild Cheetah Challenge). Donors of \$10,000 and above will be a named challenger in both major campaigns.

\$2,500
